And how many off-the-shelf, this-year's-models of Radio Shack scanners can *follow* a particular cell phone as at switches through multiple cells, which the scanner itself is moving (and apparently without dropouts or static for the length of the conversation, according to recent news blurbs). I know of units that can do it, but they're not in the RS catalog!

I'd be willing to bet there's a landline tap on someone's phone in D.C., and the FL couple were asked to help their party with a little harmless subterfuge. They look and sound like the type who would love to play a little James Bond (and, of course, "help their country"). Also according to the news, their cover letter to Rep. McDermot with the tape mentioned that they "understood that they would be granted immunity". Immunity from what? They are claiming that they didn't know it was illegal....

1802. HOW LONG IN THE NEWS GROUP

1803. Where to get 800 MHz converter ?

Newsgroup: rec.radio.scanner
Date: 1997-01-15 00:00:00 UTC
From: arielbp@white.weizmann.ac.il
Message-ID: <1997Jan15.080315.5405@wisipc.weizmann.ac.il>
Source record: 211707

I have a hendhald scanner I bought at Radio Shack. Like all scanners sold nowadays in the USA it has a gap in the 800 MHz band, where cellular phones are used in the USA. However, here (Israel) the cellular band is different, and the "missing piece of spectrum" holds some local traffic which I want to hear.

I've seen ads for 800-950 MHz converters, but they were all for kits. Is anyone familiar with a pre-built, reliable unit, hopefully not too big and not too expensive ? I will be in the USA for a short trip soon, and I'd like to buy one, preferably by mail order.

Kindly email to me at the address on top of this posting, or to:

arielbp@wisdom.weizmann.ac.il

Thanks,
Ariel (N1BP / 4Z1BP)

P.S.

I've looked at scanner modifications and test modes, my unit is too tight for those.

1804. FS: PRO-2036

i have for sale a pro- 2036, it is in excellent condition. if you don't know what a 2036 looks like it is the same radio as the bc 890xlt. it features the following:

* turbo scan.... scans 100 channels pre second.
* vfo control.... large rotary tuner to select frequency or channel.
* 200 channels
* 10 banks..... each bank contains 20 channels.
* 29-956 MHz. not continuous
* 10 priority chs. 1 priority for each of the 10 banks.
* wx alart..... severe wx radio.
* auto store... automatically stores active frequencies.
* auto sorting.. frequencies are sorted within each bank for faster scanning.
* auto record.. lets you record channel activity from scanner to a tape recorder.

price is $220

this is a nice scanner, i am selling it to raise funds for a hf transciever.
if interested call:
502-683-4946 leave message or
e-mail: scanbf@occ-uky.campus.mci.net

thanks, barry

>I am interested in any comments on the PRO-26 portable scanner...
>...I am little dissappointed in
>some of its short comings. I am interested in comments such as
>intermod problems, poor selectivity, etc....

I was disappointed that the PRO-26 I tested for MT didn't have
as good image rejection in the VHF-high band as the BC3000XLT.
Even with up conversion, I heard 900 MHz pagers while tuning
the VHF high band.

From the FAQ "Buying a Used Scanner:"

PRO-26: 1995 vintage. (Not to be confused with a simple 1985
crystal controlled portable bearing the same model number.)
Very good portable made by for Radio Shack by Uniden. 200
channels, very fast scan/search. Good display. Covers all
TV channels, but spectrum adjacent to cellular phone band is
censored which prevents monitoring parts of some trunked
systems (e.g., IL State Police district 4). Up to 50
frequencies can be skipped during search. Limited image
rejection causes 929 MHz paging interference in 170 MHz
range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz.
Audio suffers from small speaker. See "The Radio Shack
PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S,
in Monitoring Times, August 1995.

Reprints of articles from Monitoring Times are available
for $2.00 each plus a self-addressed stamped envelope from:

Grove Enterprises, 300 S. Highway 64 West, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $2.00.

Usually I start by placing a power meter in line with the transmitter. This way, I can check both transmitter performance and antenna match. If my signal is still impotent after these things check good, I blame it on band conditions.

Sometimes tranmsmitters and antennas get out of tune, you know. All that is needed to solve impotence is a little tweaking in some sensitive spots to get the circuit lined up.

I already answered this in email. Janet Reno did not shoot anyone in
Texas, in fact she wasn't even there. Her job was to take the heat
from the press and ensure that the actions of BATF were investigated.

I saw both the handheld (Feb release) and the base unit (Sept. release) and was not too impressed. They do exist but the girations that you will have to go through to get them programmed may not be worth the time and energy unless you have no other way of getting a trunking radio and getting it programmed. They are to both cost appx $250-300 but I can't understand why they would be sold for less than at 9000? Also, neither can receive both trunked and conventional.

> invulnerable to scanners?

I have one. It used inverse voice patterns (?) to scramble. If you
have a scanner capable of recieving in Lower Side Band (or Upper) you
could listen in. The only cordless you can't listen in on is a 900MHz
with Digital Spread Spectrum (I also have one of these). It spreads the
signal across several freqs and it can not be located. Pretty neat to
observe.
The "scramble" key on the phone is a demo button to let you hear what
your voice sounds like if someone was listning with a normal scanner or
another cordless phone.

RG-8 isn't really that good at VHF-UHF- it was designed decades ago for
HF-band operation. I would suggest using RG-6- it has good VHF-UHF
performance, is readily available and relatively cheap. Don't worry about
the fact its 75-ohms- it will work just fine.

>scanner in your car?
>
>Thanks!
>
>Steve

Steve,

This is a very good question, that always seems to lead to a bunch of mis-informed replies. One common one is that 'scanners are illegal in XXXXX state unless you are a licensed ham/amateur'. When you read these laws you will find that most or all of them allow amateurs to have AMATEUR TRANSCEIVERS that happen to receive outside of the ham bands. To assume that having a ham license will keep you from getting busted for having a scanner would be a big mistake. While some cops would not know the difference, most would, and some of them will interpret the law literally. Some cops have had positive interractions with hams and will let it slide, but don't count on it.

South Dakota dis-allows mobile scanners if you have a history of felony convictions. Minnesota dis-allows mobile scanners (including portables in the car) and does exempt licensed amateurs who have amateur transceivers that receive outside the ham bands.

Some states differentiate classes of amateur license (I think Michigan is similar to Minnesota, but does not include novice class amateurs in the exemption since they are not licensed in bands adjacent to public service bands). Some states specifically target felons, while others target portable or mobile scanners. I have only heard of one Eastern state that dis-allows base scanners, but that is nearly un-enforceable and may already have been changed. Just remember that the laws are to prevent the use of a scanner in committing a crime.

For further info, you may be able to look at www.qrz.com and www.arrl.org. Bye...

Bought mine about 5 years ago. Power supply runs hot. Slow scanning speed. This radio is a communication's receiver, not a scanner. Also not a radio for the once in a while hobbiest. The different modes and S-meter make it my favorite for doing searches. I think at the time I bought mine new it was $1050. Retains a nice trade in value, but I'd never sell it.

Terry,

I tried setting up a listening post on a United Airlines flight from the East Coast to the West Coast, USA. The flight crew immediately asked me to turn off the unit.

What listening I was able to do ended up with only hash, no signal from any where. I believe the hull of the airplane acts as a shield to any exterior RF. All internal communications is probably hardwired.

Been there, done that, nothing much to it. Hope that helps.

Jon

>
> This may be a silly question, but I had to ask. I am dusting my scanner off
> for my first Nascar race and am not a seasoned scanner.
>
> -Andy

First off there is no channel @ 464.6535 that I am aware of. The
frequency steps are 12.5KHz ie 45X.Y000 45X.Y125 45X.Y250 45X.Y375
45X.Y500 45X.Y625 45X.Y750 45X.Y875

X = Some number from 0 to 4 Y=some number 0 to 9

You didn't say which scanner you are using BUT most scanners do not tune
in 1KHz steps in the 450 MHz band. If you are using an older model (I
assume this because newer units do tune 12.5KHz steps) you will have to
try the 25KHz channel above or below the channel you wish to listen to
to determine which is better if you can hear it at all. Should your
scanner tune in 5KHz steps, again you will have to try above and below
to determine which is best (at least you will get something) as at worst
you will be only 2.5KHz off.

Good Luck
pht

not necessarily true, there are uhf frequencies in use in 470's that are
.8375 and the like (see NYPD SOD, etc.)

I too did something similar.. Some Joyriders had managed to escape from a pursuit and were hiding in some gardens near to where I live.
I was listening in to the local aerodrome when a call came out that they lost the gang in the area to where I lived and my mum noticed that they jumped our fence.

The police frequency sometimes over laps the local aerodrome

Don't forget there is a Constitution in this country. People have a right to privacy. I'm not sure what the gripe is exactly because I'm new. I just read the original message about why legislators are enacting "unenforceable" laws.

They do their best to pass enforceable laws always. Only when they are challenged, will anyone know whether they're unenforceable. There's usually a good reason.

1848. Re: Problem with DISCONE antenna

Ref: The Discone/cable issue...

I currently am using the discone in the attic and have
about 4 cables (50) ft. coming down to my basement
complex. Having run experiments with various cables
over the years, I have found that performance is a bit
better on the RG-8 when running into both a HF receiver
and a scanner. Sitting within 3 ft of my receivers is a
full tower PC with a 17inch NEC monitor...the coax
coming in, runs behind the monitor and very close to the
computer. Experimenting with some very cheap 75 ohm
stuff and some RG-6, I found that the RG-8 is better
shielded and is much quieter than the other cables in
terms of shielding out TV radiation interference, computer
monitor interference, etc. The NEC monitors, particularly
the "E"series are shielded extremely well...they exceed
the Government requirements in this regard. But, you'll
pay for it!

When you switch to the other cables on the HF receiver,
the local interference is very noticeable...one goes from
a fairly quiet background of atmospheric hiss and noise
to the obvious local radiation! The signal/noise ratio is
notably worse! I also note that I can back off the squelch
on my RS JRE 2035 scanner a bit...more signals are
present..I think a good broadband pre-amp at the
antenna is in order next! The quiet RG-8 would carry
more of the signal down to the receiver. Keep in
mind that a lower noise ratio is equivalent to an increase
in signal! Cable sensitivity looks better!

The bottom line is that the top of the line RG-8 presents
a quieter signal to the receivers...it is the best that I have
tried to this point...I am aware there is a very expensive
cable (can't remember the number) that has been discussed...
I'll try it a bit later...but at the present, I have RG-8 connected
to both the scanner and to a "sloper" antenna for HF and
the R-5000. I have a decent ground system in place also!

I think there are some double shielded varieties of RG-8 out
there...I think the older cable, that I have running to my HF
receiver is that type. All of the cable I have tried are by Belden.
I also have a belief that some of the less well shielded cable
also acts as a vertical antenna and adds to the signal along

with the noise. For those that are fighting the local noise
issue (computer, TV), there is an excellent device by
JPS, model ANC-4,..this is for the HF bands only..it works..
knocks out line noise very well...works on the RF level...
it picks up the local noise on a vertical antenna mounted
on the ANC-4 and subtracts this noise from the RF that
gets to your receiver..very sophisticated instrument!

Enough of this ramblin' on...hope this helps some of you out
there...

Leonard...

P.S. I just looked at one of the cables still coming down and it
is an old 72ohm cable TV piece. Junky stuff.

They are no longer being made probably for the reason that
they are capable of intercepting the 800MHZ cell phone freqs,
but the icom 2sra (2m) and 4sra (440) both have a wide band
reciever from 25 to 950 mhz.

Personally, I find it much more interesting how we got to the point
where this is criminal. I think most of us understand that the
spectrum inside someones wire belongs to them, and if you tap it
you are invading their privacy. However there is only ONE spectrum
of airwaves and they penetrate my home and person whether I like it
or not. In a sense I am intercepting all cell phone calls, but my
organs are not developed enough (as they are with the visual portion
of the spectrum) to decode the modulation.

If I am correct, there was a time when THE spectrum of airwaves belonged
to the people and you could receive anything (That does not mean
re-use for commercial benefit etc).

It appears to me that the special interest of the cell phone industry
has manipulated OUR law/rule makers into making it illegal to listen to
certain communications. To the best of my knowledge it is not that
I may listen to some frequency, but that I might go "legal or illegal"
at any moment while doing so depending on who is transmitting. (aren't
there some frequencies shared by cordless phones and other devices).

There is also the case of unintentionally receiving harmonic images
or some intermediate frequecy mix (a scanner enthusiast trick to
extend the frequency range of the radio).

I think that radio is non-secure by its very nature. There are tons
of grey areas where people need to be able to recieve these frequencies

in the context of test equipment etc. I have listened to many forms of communications on a spectrum analyser (looks like an osciliscope).

I also think that whatever law "might" make it illegal to use these and maybe any other forms electronic/mechanical communications should automatically exempt anyone who wants to report a crime (ie someone overhearing murder plans).

My answer: The public should be educated about radios (this is kind of happening right now) AND the cell phone / radio industry (police, fire rescue etc all included are currently are) should be offered technology to scramble their communications on OUR airwaves if they want to reduce the probability of it being overheard.

If you agree or disagree with me I invite you to express youself here without the flames.

/Jim

Here in Phoenix, they are glad for the help.
In an instance like this, just explain that you understand they are looking for such and so a car, and tell them where you saw it. So far, they've not bothered to ask how I knew they were looking for it.

Plenty, but the cell companies don't really care. Even when you verify
all personal info they will still accuse YOU of the illegal operation.
They
are not interested in trying to search out the biggest cause of illegal
cloning, which are the huge internal leaks of info from their own
employees.
I had several concrete examples of this and I couldn't get ANYWHERE
with these people. The local cops told me it was outside their
jurisdiction.

1863. How often should I post FAQs?

Newsgroup: rec.radio.scanner
Date: 1997-01-16 00:00:00 UTC
From: parnass@marconi.ih.lucent.com
Message-ID: <5blffd$e28@ssbunews.ih.lucent.com>
Source record: 211477
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I post some of the scanner radio FAQs twice a month.
They are archived at MIT as well.

Should they be posted less frequently?
Once a month? yearly?
I don't mind the current schedule.

A reader from the UK wrote that he pays for the files he
downloads and apparently uses reader software
which does not permit him to filter the articles
before downloading. He doesn't want to pay to download the
large FAQs.

I post to multiple newsgroups at the same time and thought
most modern newsreader tools could keep track of the articles
without presenting the same article twice. The old 'readnews'
or newer 'trn' are smart enough to recognize multi-group
postings.

I've been posting to the radio groups for 14 years, but
people are using a variety of new tools read netnews these days.

Let's rethink scanner FAQ posting schedule.
What should it be? Comments?

Has anyone else run across this problem (bug?) with the 2700?

If I set up a search bank with, say, a lower limit of 50.010 MHz and an upper limit of 51.010 MHz, and use a step size of 20KHz (0.020 MHz), the scanner will actually start at 50.020 MHz and only go to 51.000 MHz, giving me the even freqs (.020, .040, ...). The only way to get the odd (.010, .030, ...) channels is to use the same limits and a step size of 10 KHz, which gives me both even and odd (.010, .020, .030, ...)! Frustrating!

Does anyone else have this problem? Is there a trick to fix this problem?

Thanks,

Paul

I don't know about scanners at the Dbai duty free shops.

I was only at the airport in Dubai for a stop for passangers and refueleing. The duty free shops there are pretty good with very good prices. They did have 4-5 shortwave receivers and I bought one.

If you do find a scanner there, check the frequency coverage carefully. The shortwave I bought there was missing a low band plus the lower end (1.6-2.0 MHZ) of the short wave band.

>near my work that says they can disable this limiter for $20.00, but I
>thought it might be something I could do myself (clipping a resistor is
>not all THAT difficult, right? <g>)

Well, I'll probably catch a little spam for this, but the low tech
solution is:

Take a small piece of tin foil in place it over the earphone jack so
that it grounds against the BNC connector for the rubber duckie.

Plug your speaker in through the tin foil.

What happens is the limiter is bypassed by giving your speaker a
direct path to ground not through a dropping resitor..

Yes I know this is a poor sloppy way to do things, but this works
until you can take your 200xlt apart and solder a small wire from the
bnc ground to the ground of the ear jack.

I hope this helps you. Have a great one.

I want to buy a Radio Shack Pro 2006 scanner, with or without cell mods.

Please email to jaa155@psu.edu

I used to use one before modifying my scanner. It works great, the only
potential drawback being if you wanted to scan a frequency in the
'conversion'
range while using the converter to knock down 800mHz.

Gee, do you suppose THIS will become the case that puts that idiotic STATUTE on trial, you know, the one pushed on us by the cellular phone companies, the one that says certain parts of the radio spectrum are off-limits to even casual listeners who just want to know what's being broadcast through the PUBLIC'S airwaves?

Scanner enthuisiasts would do well to consider a contribution to the defense fund, if one is established.

Think of it.....you can actually HEAR crimes in progress, with legal receivers like the AOR-1000XLT, and yet IT'S ILLEGAL TO TELL THE POLICE or ANYONE ELSE what you've heard! BUT.....if you hear it on a wireless phone, then it's okay. Go figure.

What a country!

This is a public service posting. It may or may not be relevant to the subject of your news group but it may be of significant interest to
the readers of your newsgroup.

Flash!

The Department of Justice under the direction of US Attorney General Janet Reno and the Office of the Attorney General for the
State of California under the direction of Daniel Lungren are investigating the following credit card companies for falsifying billing
statements: If you ever made a partial payment on your credit card and had them charge a late payment fee you may want to contact
these offices about participation in the conviction of these companies for racketeering by furnishing information about false billing
practices.

First USA Bank

Wachovia Bank Card Services
P. O. Box 4635
Atlanta, GA 30302

Wachovia Bank Card Services
P. O. Box 15515
Wilmington, DE 19886-5515

Check your billing statements closely. If you have been charged a late fee even though your payment was mailed prior to the due
date you should report it to your state attorney general. If your finance charges are being listed as purchases you should contact your
state attorney general. If your credit card company is unable to funish a copy of a signed billing receipt you should notify your state
attorney general.

All the events described above could make you a party to a class action suit against your credit card company where you could
collect up to ten times the amounts you were falsely charged.

For more information contact your state attorney generals office.

>
> -Andy

Hi there, Andy!
Battery on the Unidens are good enough, but the idea of having to charge
the batteries every time you want to listen without using the batteries
alone, is no good idea at all. So:
I have a bc100xlt, and have done something smart, I think.
I have put new, chargeable batteries in the compartment and put a switch
on the radio. With the switch in first position, the batterie are
charged from the DC input connector (which I also canged of coarse
because the miniJack is much better in the long run...). With the switch
in second position, The radio is given power by the external power
WITHOUT CHARGING THE BATTERIES AT THE SAME TIME. This prevents the
batteries to be charged every time I wish to use the receiver, and also
to enshure that my battery is allways fully charged when I leaving home
with it.

Regards, Tore

Yeah, this is quite possible. A few years back, whenever I was younger, I was flipping through the channels on the TV set. Damned if I didn't hear phone calls. I didnt realize what I was hearing at the time. Look in the UHF channel 81, 82, 83 I found were the most active. By the way, this was whenever it was still legal to monitor cellular.(<--- disclaimer)

1883. How to intercept cellular telephone calls cheaply.

Newsgroup: rec.radio.scanner
Date: 1997-01-16 00:00:00 UTC
From: jackmor@iglou.com
Message-ID: <jackmor-ya02408000R1601971648410001@news.iglou.com>
Source record: 211497
Cross-posted to: rec.radio.scanner,alt.radio.scanner

As several folks have contacted me by email to
get information on the use of old Motorola
cellular telephones as cellular telephone scanners,
I am posting information for all to read.

Now, understand that monitoring private
telecommunications is a serious CRIME with a
penalty of five years in jail, so DON'T MONITOR
private communications, UNLESS the government
indicates that it does not intend to prosecute
the people who commit these crimes. Carefully
follow the trials of the Martin's in Florida
and Congressman McDermott to determine what
the government's policy will be on this matter.

Now, it is clear that the fight for freedom
will be fought with information, rather than
bullets, and that the battlefield of this
fight will be the Internet, so it is vital that
the people who value freedom, and oppose
big, oppressive, self-serving government
use the same weapons as their adversaries.

IF government officials and government employees
use scanners and recorders to violate the privacy
of the peasants, in order to obtain an advantage
over them, then it is incumbent upon the peasants
to protect their freedom by using the same weapons.

I suggest that it would be useful if
some defender of freedom, set up a Web site
and maintained information about the
weapons available to the peasants to
fight the information wars to maintain
their freedom and work product.

In this spirit, I post the following information
with the hope that freedom loving folks will
stash it away in their arsenal of information
age defensive weapons.

Many of the old Motorola phones have an
RS232 (DB-25) connector and can be put into
the "test mode" by shorting pin 21 to ground.
Pin 21 is ground on these models so

shorting pin 20 to pin 21 will do the job.
This can be accomplished by using a jumper,
or a pair of RS232 connectors, or a Radio Shack
RS232 breakout box, etc.

Once the telephone is in the "test mode"
the following commands may or
may not be operative on various models:

05# - transmit on
06# - transmit off
07# - mute on
08# - mute off
11xxxx# - set to channel xxxx
13# - power off
17# - transmit a test signal
19# - Display software version
27# - Transmit RECC data
32# - Clears all programing
35x# - set audio path to x (1 = speaker)
36# - scan
36xxx# scan at speed xxx
45# - display signal strength
48# - side tone on
49# - side tone off
50# - transmit test data
53# - speech scrambler on
54# - speech scrambler off
71# - adjust transmitter power
73# - adjust transmitter power

Note that I list the transmitter tests
so that you can avoid transmitting.

I must mention that extremely powerful information
age weapons are availiable to, and used by government.
For example, the government has been using optical
computers for over thirty years to find radar,
optical and aural signatures in information
such as side looking RADAR recordings,
aerial photographs and audio recordings.

Optical computers can find patterns in any kind of
data extremely quickly. For example, optical computers
are used to screen RADAR and aerial photographs to
find new construction and troop movements. Optical
computers have the advantage over digital computers
in that they analyse an "area" of information,
rather than a "point" of information (They
have two degrees of freedom.), and they perform
fourier transforms and masking operations instantly.

Some of you "Young Tom Edisons" might wish to study this field and make low cost optical computers available to the free market, as they would be great for vibration analysis, voice recognition, screening audio information for speech model patterns, etc.

May the force be with you.

In the case of ECPA and TDDRA, the "good reason" was lobbying from the very wealthy Cellular Telephone Industries Association. Can you say "conflict of interest"? Sure you can.

Your scanner will probably give you the best answer. Try punching in
one of those frequencies and see what the display says when you're
done. That will give you an idea of what the closest frequency is
that your scanner can handle. Then you can list them accordingly.

Remember, 99.99% of all mobile cellular telephone antennas installed are using 20 feet of RG58U. My 30 years of experience in the ham, comunications, and cellular industry tell me this: Be concerned first with the matching, then, if there is loss, use a larger cable with the same impedance as the radio. Now, considering 800 mhz, if you use over 20 feet of RG58U, then you would have done better to mount the antenna lower with less coax, than higher with more line loss, but there are alternatives to that. There is very expensive hardline, or amplification of the signal at the antenna feed point. I would never consider using a mismatched line impedance for any antenna, as in using RG6, a 75 ohm impedance cable. Remember, RG6 is a mismatch at the antenna feedpoint, and at the receiver input stage. Check the characteristics of all types of cable in the Radio Amateurs Handbook, at your local library, for the facts. Hope this helps, Rod.

I have a Pro 2035 and the Opto OS-535 interface. They work great. It took about 2 hours for the complete installation, including the time it took to review the instructions first. The installation was not hard at all.

I am also using Probe software on a dedicated 386/25 laptop and this setup is fantastic! I highly recommend the Probe software. Great service and support from Datafile, Inc and it's a very powerful and flexible program.

Good luck finding a new Pro-2035. They seem to be getting scarce at Radio Shack.

> to digital cellphone decryption equipment.

Yes the "American" police have access to digital cellphone calls - if they have a warrant they have access to any phone calls. But you can bet that will not be running around with receivers chasing RF signals. They go to the cellular provider and have a "wiretap" placed on a particular phone number.

Some cellular carriers (maybe all of them - I know of at least one) have dedicated circuits going straight to law enforcement facilities. Once a tap is in place and connected to one of these circuits, the police can monitor all calls on the "tapped" phone from the comfort of their own office. In addition, the carriers can provide information about the cellsite(s) the call used so that police can narrow down to local areas if they need to.

I have a friend that used to set these taps up for the FBI and Secret Service when he a cellular switch tech.

It should be noted that, at least here in California, only federal law enforcement will do wire taps. Local police cannot get warrants for wiretaps from California courts. This does not mean that locals are not involved as they often work with the feds.

If they don't have a warrant - they are just like the rest of us and have to find a way to "scan" the RF illegally.

As to what kind of phone was being used by Newt Gingrich - none of the articles I have read say. I assume he was on a regular landline - he was in Georgia. The call was recorded in Florida. One of the persons on the conference call was in Florida using an analog cellular phone.

Also note that this case did not involve the police. It was a couple of "private citizens" that overheard the call and recorded it. It was illegal eavesdropping.

Regards

Two of the best mail order places to get it are:

Grove Enterprises....and....Scanner World

You might want to call the 800 info operator to get their no's.

I am told that Wal Mart stocks scanners....if there is one in
your area, give them a call....or the PRICE CLUB is another
good source....if they carry 'em.

Also, check out Monitoring Times mag...if they still are publishing
currently...someone posted they went out of the business.

If they are still around, check it out at a large magazine stand.
Plus there is one more that is stocked at mag stands that deals in
selling scanners mail order....Communications ? something....

or ? Communications

bill conduit
etc.

I believe (but I may be wrong) that is legal under the "no disclosure"
law, as you were disclosing the information to someone who was a party
to the original transmission. Even if it is not, they usually don't mind
if it helps out...

I don't know anything about Autrailian aviation regs but I would bet that it is illegal to use a scanner on board a plane without, at least, the pilot's permission. Though you are correct in saying that it is most unlikely that your scanner would cause the plane to crash, it can cause interference to nav and comm equipment. Disregard of safety regs is pretty irresponsible and does nothing to make scanner enthusiasts look good. Check with the airline or the plane's crew.

If you can get the pilot's permission, then try to ask them for the frequencies they will most likely be using on that trip.

Regards

I am looking to buy a BC-9000 XLT that will do the "forbidden 800Mhz"
cell band.
Also i would like to get the optional tone board for that scanner.
Please no scanners with switches (which require conversion charts)
or 800Mhz down converters.
And with that i have a Regency MX-7000 for sale covers
25-550 800-1300 NFM,WFM,AM 20 channels. With operations manual and
AC adaptor "wall wart".
Asking $150.00 Please leave a message at the following.....

fhunt@clinic.net

Thanks for taking the time to read and respond.

1896. RS Pro 51 question

Newsgroup: rec.radio.scanner

Message-ID: <Pine.GSO.3.93.970116161821.2015A-100000@sky.net>
Source record: 211510

I recently got a RS Pro 51- 200 channel rig. I'd like to learn if any keyin combination will reveal battery state? On my former Sportcat 150 I could press WX and LO simultaneously at power-on to get a relative reading of batter charge. Any such undocumented feature for the Pro 51 that anyone's uncovered. Very useful information to have. Anybody with any keyin combos for the rig?

Nit picks with the Pro 51 - still can't directly input one freq without going to program. Can't seem to step through the preset "Bands" - Fire, Marine, WX and Air. (maybe someone can tell me how to step through these freqs slow enough to see what they all are). The LCD window is very reflective, a glare resistant window would be nice. Not a of contrast to the display at best and any glare hides the display.

Otherwise fairly decent rig - I like the ability to set upper/lower limits to a search - big step up in functionality from the SC-150 I had used. And the extra 100 channels are the best part.

>accessories for $225. Oh yes, and it was in excellent condition also.

First, It's not my radio or my price, read the top of the original post. Second, you can't buy one new for this price because they don't make them or sell them new anymore, the 582 has less receive and has been downgraded. Third, I have seen some others going around recently, and I don't think this price is too high. There was one posted a day later, without the 5W battery for $350. Fourth, it does say negotiable, so if you had any interest in buying it, no one said that price was written in stone. Fifth, if you don't want it, don't buy it.

1900. Base scanner antennas

Newsgroup: rec.radio.scanner
Date: 1997-01-16 00:00:00 UTC
From: Eric Plent <eplent@injersey.com>
Message-ID: <32DECC98.499E@injersey.com>
Source record: 211514

Can anyone recommend a decent base scanner antenna? I had, at one time, the Radio Shack discone antenna but did not get outstanding results from it (especially in the higher frequencies). I am mainly interested in the 450-480mhz range, but I do monitor the New Jersey state police on their 800mhz trunk system.

My main objective in installing this antenna on my house is to pick up a 470mhz channel located about 20 miles away. On a good night I can just about pick it up with the rear-mounted antenna on my Pro-2036, but "just about" doesn't cut it.

Any suggestions are appreciated..

- E

I believe (but am not 100% sure) that scanners are now *not* illegal to carry in your car in the state of New Jersey. Some sort of communications act was signed several years ago which said something to the effect that if you were not using the information you received over the scanner for illegal purposes, it was legal.

1902. Uniden Trunk Tracker

Newsgroup: rec.radio.scanner

From: gary.saffer@channel1.com
Message-ID: <40.46869.2433@channel1.com>
Source record: 211516

I've seen flyers for both the BC 235 XLT and the BC 895XLT, and both seem to be reasonably good radios. The only problem that I see with the 235 is that it doesn't have PL for conventional systems. This is almost inexcusable, no, it is inexcusable. Uniden has the technology to put a PL/DPL board into a radio that size, and it's just plain stupid that they didn't. OTOH hand, the 895, like the 890, has PL. It's just not clear if it has DPL as well. If it does, it is definitely worthwhile getting. As a matter of fact, if it does, I will probably sell my Pro 2005 and get one. The only problem with the 895 is the size of the thing. I wonder why they didn't build the base/mobile version into the same size chassis as the 760? After all, there's not that much in side the 890 that it couldn't be re-engineered and put into the smaller chassis.

Well, that's my whine for the day.

1907. Philadelphia Area Trunked Public Safety Update

Newsgroup: rec.radio.scanner
Date: 1997-01-16 00:00:00 UTC
From: jcardani@voicenet.com
Message-ID: <5bjpkb$hgr@mail.TJU.EDU>
Source record: 211537
Cross-posted to: phl.scanner,rec.radio.scanner

This is an update summarizing all known Philadelphia area trunked systems used for public safety - existing and planned. Southeastern Pennsylvania, Southern New Jersey and Northern Delaware will be covered.

The purpose of this document is to update the scanner listening public. Trunked systems in the Philly area are developing at a fast pace. With the introduction of the first trunked-capable scanner by Uniden, this information will be of vital interest. The Uniden Trunk Tracker product will be capable of following the Motorola trunked radio format only, ie, the Ericsson and EF Johnson systems cannot be followed with the Trunk Tracker.

Also, there is a good reference for trunked radio system users - the Trunked Radio System Users Page at http://members.aol.com/wwhitby2/trs.html

My South Jersey Scanner Page details the frequencies used and other details for the south jersey trunked systems, plus lots more. You can find it at: http://www.voicenet.com/~jcardani/sjscan.htm

Here is the trunked update as of January 1997:

PENNSYLVANIA

Commonwealth of PA

Gov. Ridge recently approved a multi-million dollar upgrade to the PA state's radio system. An 800 Mhz Motorola DIGITAL trunked radio system operating on 800 Mhz will be implemented over the next 4-5 years. All state agencies are expected to use the system.

Bucks County

Bucks county is in the planning stages of their upgrade. They would prefer to use digital technology; however, this is not a priority at this time. Interestingly, Bucks will be trunking their existing 501 Mhz frequencies. Law enforcement, fire, EMS, and county services are expected to use the system.

Chester County

Chester county is in the process of installing an EF Johnson Multi-Net Similcast system for police, sheriff, fire, EMS, county detectives, and county services. The system is expected to be online sometime in 1997, but details are difficult to obtain. Over 20 800 Mhz channels at 16 sites will be utilized. Some activity was monitored and several

Multi-NEt status channels are in use. Several encrypted talkgroups will be implemented on the system.

Montgomery County

Montgomery county is presently installing a Motorola SMARTNET II trunked system for law enforcement and county services. I am not sure if the fire and EMS will use the system. I hear that this will be an analog system. On January 12, 1997 the system's control channels started functioning, so testing should not be too far away.

City of Philadelphia

Philadelphia is still performing a study for their 800 Mhz trunked system. Several vendors including Motorola and Ericsson are in the running for the bid. Philly would like to go the digital route.

City of Bethlehem

Bethlehem has a Motorola SMARTNET II system in place for Police Fire EMS and city services operating on 800 Mhz. The communications are outside of my listening range. This system has been operational for several years.

NEW JERSEY

New Jersey State

The New Jersey State Police operate on 3 Motorola SMARTNET IIi trunked systems that are linked together. Two systems, Troop A - South (12 channels) and Troop C - Central (14 channels) are within my listening range. For each system, generally 14 Type I subfleets are used for routine troop dispatch/operations, aviation, executive protection, turnpike, and parkway; 14 Type I subfleets are used for the attorney general, investigators, corrections, gaming enforcemet, criminal justice, human services, emergency management, and radio maintenance; and 15 Type II talkgroups have recently been added. Currently the Northstar and Southstar medevac helicopters, turnpike, parkway, high ranking commanders and investigators are utilizing these talkgroups. Finally, the Department of Transportation (Emergency Service Road Patrols) and Departnment of Environmental Protection have recently joined the system, using their own talkgroups.

Camden City

Camden City is currently testing their Ericsson EDACS 5 channel 800 Mhz trunked system which has Aegis digital encryption. Simulcasting of several 460 Mhz police repeaters can be presently heard. Law enforcenment and city services will reside on this system. Fire and EMS will remain on VHF and be dispatched by Camden County communications. Several sensitive talkgroups will have the Aegis digital encryption.

Egg Harbor Township (Atlantic County)

Egg Harbor Township is currently simulcasting several VHF law enforcement, fire, and EMS channels on their Ericsson EDACS 5 channel 800 Mhz system. All township public safety and public works will use this system. Aegis digital encryption was occasionally heard on this system.

Galloway Township (Atlantic County)

Galloway is also implementing an Ericsson 5 channel 800 Mhz EDACS system for law enforcement, fire, EMS, and township services. The police department, formally dispatched by the Mid-Atlantic dispatch network, is now self dispatched on the trunked system. Simulcasting of several fire and EMS VHF frequencies were recently heard.

Ocean County

Ocean County has implemented a 5 channel Motorola Type II system which uses 506 and 508 Mhz channels. Currently the users are north and south police dispatch, sheriff's office, prosecutor's office, emergency management, and some county services. Fire and EMS may join the system in the future.

City of Trenton

Trenton is currently testing a Motorola SMARTNET II DIGITAL trunked system operating on 800 Mhz. I know little about this system except that I have not heard any analog transmission to date. I beleive that all city public safety and city services are slated to use the system.

City of Vineland (Cumberland County)

Vineland uses a Motorola SMARTNET I system 5 channel 800 Mhz system for law enforcement, fire, EMS, and city services. It has been operational for several years. This system is analog.

STATE OF DELAWARE

The state of Delaware has recently fired up their Motorola SmartZone (I believe) DIGITAL trunked 800 Mhz state-wide system. Not only all state public safety - but county and local agencies are expected to utilize this system. I have only heard one control channel operational as of the beginning of January 1997. I have not heard any testing to date.

City of Wilmington

Wilmington uses a Motorola SMARTNET I - 7 channel 800 Mhz system for Police, Fire, EMS, public works, and city government. One fleet is used for police, one fleet for Fire/EMS, one fleet for public works, and one fleet for government use. The system has been operational for many years. this system is analog.

Well, that's it. If anyone has any additional information or corrections, please send them along!

Joe

You might check out MY article in the February issue of Popular Communications comparing the IC-R8500 and the AOR AR-5000 (sorry, Bob, but I couldn't resist).

Seriously, though, I agree with Bob. It's an excellent radio. My only criticism was of the scanning scheme, allowing you to scan either one bank, or all the banks, but not just two or three banks at a time.

Still, I doubt that I would purchase one, even if I had the $2,000 to spend. Instead, I'd probably buy a Drake R-8A, a Uniden 9000XLT and an AOR AR-8000 handheld. The cost would be about the same and the three radios would be far more versatile than just one IC-R8500.

That's how mine is mounted. I don't have any notable problems, however I live in the Denver metropolitan area and most signal I listen to are fairly strong. I am able to pick up most 800 Mhz and air bands with no problem. I can even get cordless phones/baby monitors for quite a distance. I haven't tried any serious DX listening, however I doubt it would be a big problem, except for local signals interfering. Our home owners association has restrictive covenants covering external antennas of any type. Plus, I just think it looks better not having a porcupine roof.

I tried it last night. I received ok results on numeric messages at
512 baud. I have no way to verify the accuracy of the decoded
messages. Alphanumeric decoding was unusual and unreliable. Here's
an example of what you might be able to decode (this isn't the actual
text of a page)

1/14/97 11:26:35 PM
Alphanummeric RIC=1293964
Data: 2OF9-TENNESSrE W*. THE LOWER LAYER __ THE ATMOSPHERE ISpJECOMING
QUITE SATUr[TED AS WARM MOIST *

1/14/97 11:26:38 PM
Alphanummeric RIC=1293964
Data: 3OF9- AIR FROM THE SON/H OVERRIDES THE COLD4AIR NEAR THE
SURFASo. AS A RESULT, FOG mS FORMING ACROSS

1/14/97 11:26:46 PM
Alphanummeric RIC=1293964
Data: 4OF9-SOUTH CENTRAL TENNEymEE AND WILL THICKEN0yND SPREAD INTO
LAWy#NCE ANDGILE COUNTI/S

Does that give you and idea?

1918. Australian In-Flight freqs for Ansett??

Newsgroup: rec.radio.scanner
Date: 1997-01-16 00:00:00 UTC
From: woody@daemon.apana.org.au
Message-ID: <32de2e7c.534661083@news.netspace.net.au>
Source record: 211548

Greetings,

Can someone possibly tell me some freqs that would be worth listening
to while in-flight on an Ansett Australia national flight? Im going
to be taking a 4 hour flight and thought it may be interesting to
listen to whats going on while bored on the plane.

Please dont tell me the crystals in my scanner are going to down the
plane or something as im pretty sure it wont :)..

Catch ya,
Woody <woody@netspace.net.au>

Its legal in Florida if you have a valid Amateur Radio License.

I heard the same about Kentucky, but I never looked at the actual
statute.

The People's Republic of Minnesota. Born and raised there. Never "got" me, but I personally know of people there who have had their mobile scanners confiscated and/or destroyed by overzealous law enforcement officers. Just one reason why I don't live there anymore.

You're under arrest! You have the right to remain silent... ;-)

Actually if we took out all of the stuff in this newsgroup about
cellular phones we would not have as much crap to sift through when we
log on. To this day I cannot figure why a normal person would want to
monitor cellular telephones.

Back to paging. There are some private paging systems that are licensed
under the private land mobile radio service. You can legally monitor
those systems as long as you do not divulge to anyone what you hear.

Regards

Last I knew it was illegal in New York unless you had an amateur
radio license. Even then, I heard of police who would confiscate
the radio because they were unaware of the exemption and thought
they were being conned. The police said if it was really true,
you would get it back at the hearing. Of course the radio wasn't
always returned in the condition it was in when it was taken.

Anyways, when I lived in New York, I always carried a copy of
my radio license and the statute with the exemption clearly
stated.

Strong signals,
Rich Wells

>Thanks,
>Bill Crocker

I tested an ICOM R8500 for my Scanner Equipment column
in Monitoring Times magazine and liked it enough to buy one
for my own use.

Most DC-daylight receivers are a compromise, but the R8500
is an exception and works well across a wide spectrum.
Haven't had intermod or image problems thus far.

It's easier to use and the construction is much more
rugged than the R7100A, another receiver I enjoyed.
It's heavy because the circuit boards are bolted to a thick,
cast aluminum chassis.

My R8500 is pretty sensitive up through 1,400 MHz,
then starts to become less sensitive.

See the current issue of Monitoring Times (Jan. 1997)
for a full report, including my sensitivity measurements
up to 2,000 MHz in graphical form.

Reprints of articles from Monitoring Times are available
for $2.00 each plus a self-addressed stamped envelope from:

Grove Enterprises, 300 S. Highway 64 West, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $2.00.

Depends on what price you pay for it. I own one and like it a lot.
One nice feature is locking out specific frequencies during frequency
search mode. That comes in handy listening to cellular because in my
area I images on a lot of the frequencies that cause a lot of unwanted
manual scanning functions...so all one has to do is hit lockout when
it stops on unwanted frequency.

The cons of the scanner are that it is an EXTREMELY DIFFICULT scanner
to use. The functions are not obvious and you MUST read the manual.
Even after reading the manual I suggest buying "Guide to AR1000"
because this book explains the functions in lamens terms.

If you can get one for around $150 then get it!! I paid $175 used for
mine from a friend. Make sure you test the scanner before buying it.
The weather frequencies are a good test. Local police, cellular data
channels are other test.

EDCO is an importer (in Virginia) and does not sell to the public.
However its sister retail firm is EEB (owned by the same person), and
that URL is <http://www.access.digex.net/~eeb/eeb.html>

Hope that helps. Tom Sundstrom

Bruce;
There are about 6 bands between .2 and .55 MHz. The signals you heard
are probably radio location becons used by air and ship traffic. There is
a good summary article in the February '97 issue of Popular Electronics.

Bruce;
The beacons you here are probably airport beacons. Unless you have a really huge antenna they are probably local, within 250 miles of you. Try to match the letters with airports near you. In my area, SFO is San Fransisco International and PI is Pigeon Point, a light house.

So has anybody actually heard a good quality copy of the tape? I am wondering if some of these questions can be answered from the tape itself....

1. Does the recorded tape appear to start from the beginning of the call or at a point somewhere during the call? If the whole call was taped from beginning to end it would be more likely that a particular cell phone (or wireline phone) was targeted.

2. Is there the characteristic data buzz of the forward overhead voice channel signal present anywhere on the tape? If the mobile phone was moving then a power attenuation setting or channel change command would have likely been received sometime during the call. If there is no buzz, then he was likely not moving or the call was taped on the wireline side.

3. Is there any audible road noise to confirm movement of the vehicle to help with question number 2?

4. Is the audio level of the mobile phone talker (Boehner, I believe) significantly reduced from the audio level of the other talkers? A reduced audio level from the mobile talker would be consistant with a cellular system properly setup with an echo canceller. A mobile talker with a high level could still be possible, but seems to be less likely in most systems.

5. Is there any evidence of the supervisory audio tone present on the tape recording? Some energy on the tape at a SAT tone frequency would help prove that it was actually taped off of the cellular system.

You might also try cutting a piece of coax to an electrical half
wavelength of the lowest desired frequency. Or, if you are an antenna
nut like me you can cut a separate half wavelength for each of your
favorite bands. I have had very good results with half wave coax.

The method:

((Speed of light) divided by (desired freq.)) times (coax VF) = 1/2~

speed of light = 3,000,000 meters per second
desired freq. = your choice
coax VF = the velocity factor of your coax according to
the manufacturer.

Happy signal catching.

Don't tell that to Lucent Technologies! I was very surprised to hear
Newt was on an analog system in DC. Most analog users are "Joe Bag
O"Donuts" who went for the $.01 cell phone with a "contract" for
expensive service.

What gyrations? You enter the repeater frequencies (once) then press the
Search button, for a Type II system, the most common. For a Type I or
Hybrid system you also enter 8 size codes (once) then press the Search
button. This is not brain surgery.

Both radios receive conventional as well as trunked systems. These radios
are not difficult to operate.

Actually Minnesota does issue Scanner Permits. If you wish to listen to anything other than law enforcement, you only need to apply for a permit at the BCA Office in St. Paul, to listen to Law Enforcement frequencies, you need a letter of authorization from the agency head as well as the state permit from the BCA.

To my knowledge, Minnesota does not exempt ham licensees, but I am not sure on this part, since I got my scanner permit before my ham license...

Ameritech Cellular has been using RF Fingerprinting here in Detroit for about 4 months or so and so far me nor anyone that I know (and 2 of them are HEAVY cellular users) have been dropped.

> I sure don't want to be your liability insurance carrier when some lawyer's

Same moaning and bitching was said about PINs and I had not heard of anyone being raped and / or killed or even gotten into a traffic accident while dialing the PIN.

> Just my opinion, but I sure think it sucks when some "new" and "great"
> technology makes life more difficult for the average person in the name
> of saving money for some large corporation. Encrypt, authenticate, that
> is fine, but using marginal technology to shut down phones is WRONG.

And I am sure you would be more than happy to be forced to pay for a new GSM/PCS phone so you would not have to dial a PIN or "risk" RF fingerprinting shutting down your phone.

On a related note...does anyone have any figures on how effective RF Fingerprinting is to eliminate cloaning? From what I have heard the cloners here in Detroit are concentrating on AirTouch Cellular who is still using a PIN system.

Message-ID: <1997Jan17.162621.419@mtroyal.ab.ca>
Source record: 211290

is there a different freq for every single cell phone in a given area?
ie) if i found a freq with say, joe shmoe's phone line on it, will that
freq always be joe shmoe's ?

If so, wouldn't that be reason enough to assume someone could've found Newt
Gingrich's frequency, and then recorded every thing he ever said, thus
the story could well be viable?

just wondering,
matt.

>1. Will these scanners pick up cellular phone and cordless phones??

Cordless phones, yes. Cellular, no. Some of those you listed will pick
up cellular images on 896-916 MHz.

>2. What is the range for most scanners??

It depends on the scanner. A lot of them will pick up the 800 MHz band,
less cellular. Some will pick up the AM aircraft band (108-137 MHz).
The higher priced ones will pick up the military aircraft band.

>3. The SC150 says it picks from 806 to 956 MHz (Public SVC band, except
>cellular band) does this
> mean it will not pick up cellular phones.

Yes, but the SC150 will pick up cell images.

>4. Do the hand held scanners have the same reception? (of the models above)

With a good antenna, yes.

>5. Can you buy outside antena's or amplifiers?

Yes.

Here is a copy of a file I have for the Pro-51 hope it helps
Shiloe..
Also, the cellular part of this file doesnt work for the newer 51's but
the rest of the document is good.
"PRO-51"
There is an interesting test mode in the PRO-51 that,

combined with the direct search feature of the scanner, lets

you pick up out-of-band frequencies. You will have full

access to the 66-88 Mhz ranges as well as the cellular base

range of 869-896 Mhz.

Actually, there are several test modes in the PRO-51 (most of
these comments should be true for any Uniden-made Radio Shack
scanner, such as the PRO-46). I'll describe them first and
then how to take advantage of one of them to get the
restricted frequencies.

There are three data test modes. These modes completely
destroy any frequencies you had programmed into your scanner,

so it's best to use these techniques before you program your scanner. If you have already programmed it, you'll have to decide if these new capabilities are worth reprogramming.

TEST MODE 0. Clear the scanner.

A well-known method of clearing the scanner to all zeros is to hold down the 2 key, the 9 key, and turn on the scanner. All frequencies will be lost.

TEST MODE 1. Fill channels 1-25 with test frequencies.

Press the 2 key, the 9 key, the L/Out key, and turn on the scanner.

This fills channels 1-25 with these frequencies:

1 30.050 2 40.840
3 49.900
4 138.150
5 162.400
6 173.225
7 406.875
8 453.250
9 511.9125
10 108.500
11 118.800
12 127.175
13 135.500
14 66.450*
15 76.825*
16 87.425*
17 157.800
18 482.3625
19 29.000
20 54.000
21 806.000
22 857.200
23 888.96*
24 911.500
25 954.9125

* indicates not within the PRO-51's normal coverage. More on how to use these in a minute.

TEST MODE 2. Fill channels 1-17 with test frequencies.

Press 2, 9, Manual

Fills channels 1-17 with these frequencies:

30.00, 40.00, 50.00, 140.00, 155.00, 170.00, 410.00, 460.00, 510.00,
54.00,

109.00, 118.00, 127.00, 135.00, 810.00, 860.00, 950.00.

There is also a display diagnotic mode.

TEST MODE 3. Display Test.

Press 2, 9, BAND or 2, 9, MONI.

This put the display in test mode. Every annunciator and every digit element is turned on in a scan from the left side of the display to the right. To keep this test mode continuous, release the buttons before the first scan finishes. This mode does not affect stored memory. Press any key to exit this display mode.

Now, if you've decided to try test mode 1, you will find several out-of-band frequencies stored in your memory channels. Channels 14-16 hold frequencies in the blocked-out 66-88 Mhz range, and channel 23 holds a frequency in the blocked-out cellular base range. Once you have these frequencies stored in a memory channel, the PRO-51's direct search feature will let you search though these ranges. In the cellular band, the scanner searches in the correct 30 Khz steps.

You don't have to keep these frequencies in the channels they were stored by the test mode. You can move them to any channel in the scanner. HereUs how.

First move the frequency to a monitor channel:

While on a channel with one of these frequencies, open squelch completely. Press direct search button, either up or down. The direct search button puts the scanner into search mode and the open squelch holds the frequency. Then press the Monitor button. The frequency is now in the monitor channel indicated in the display.

Now you can move it to any regular memory channel in the scanner:

Enter the channel number
Press PROG
Press MONI
Press the number of the monitor channel if the proper channel is not displayed
Press E(nter)

The frequency is now permanently stored in the memory channel. You can do a direct search from this memory channel at any time.

The 66-88 Mhz range mainly covers TV audio. However, there is a strange phenomenon concerning TV audio and the PRO-51.

Channels 4, 5, and 6 fall within the 66-88 Mhz range (71.75 Mhz, 81.75 Mhz, and 87.75 Mhz respectively), yet the PRO-51 will not pick up the audio frequency while searching in this range. However, TV channel 2 audio is at 59.75 Mhz. When you add the intermediate frequency of 21.6 Mhz, you get an image of the TV channel 2 audio appearing at 81.35 Mhz. This does come in, although raspy, since the PRO-51 is receiving in narrow FM mode while TV audio requires wide-band FM mode for proper reception.

Right. If you buy a scanner from Grove, you must accept delivery of it
AND THEN send it back in order to be modified. This is what makes it
legal.

These clowns in N. Florida claim they bought the scanner from Radio Shack
anyway. Hope they don't start picking on Bob because of this!

Cellular Phone Law
Has Loophole

By JEANNINE AVERSA
Associated Press Writer
Friday, January 17, 1997 1:38 am EST

WASHINGTON (AP) -- Bob Grove makes no bones about it. For a fee, his North Carolina company will modify a radio scanner to pick up cellular phone conversations.

Isn't that illegal?

Grove says no.

But cellular telephone executives and others disagree.

To protect cellular callers' privacy, a federal law, which took effect in 1994, made it illegal for companies to import, manufacture and sell in the United States scanners that work on cellular frequencies.

Federal regulations say radio scanners ``must be incapable of operating'' on cellular frequencies or cannot be ``readily altered'' by the user to work on them.

Grove insists that he is within the bounds of the law and federal regulations because his company, Grove Enterprises Inc., neither sells nor markets altered scanners.

``There is no caveat, no direct prohibition against modifying those scanners which are here,'' Grove claims.

While those precise words are not used in the law or regulations, communications attorneys say companies or individuals that modify scanners to pick up cellular signals are violating federal provisions.

``The creative lawyers always claim loopholes,'' said Thomas Wheeler, president of the Cellular Telecommunications Industry Association.

``The intent of the Congress was clear, and I believe that will be backed up by the courts and if not by the Congress itself. It is wrong,'' he said.

Rep. Billy Tauzin, R-La., the incoming chairman of the House Commerce Committee's telecommunications subcommittee, wants to hold hearings in early February to look into abuses of the law and possible loopholes.

``Clearly, the intent of the law is to not only prevent the sale of scanners that can intercept cellular phone calls, but also to prevent their reconfiguration,'' said Tauzin's spokesman Ken Johnson.

The issue came to prominence after a Florida couple picked up on a police scanner and then taped a phone conversation during which Republicans plotted strategy for House Speaker Newt Gingrich in the wake of ethics charges. One person involved in the conversation was on a cellular phone. Parts of the tape were subsequently printed in The New York Times.

Grove said the company was contacted by the FCC a year and a half ago about possible violations of the federal provisions. Grove said the company defended its practice as legal and has not heard back the agency since.

The FCC declined to comment.

``By our interpretation we feel that this is definitely following the guidelines of the law and that we are not in violation,'' Grove said in a telephone interview with The Associated Press.

Grove Enterprises advertises its modification services on the Internet.

``Here's all you need to do,'' the company tells prospective clients at its web site. ``Call the Grove technical line ... to discuss your modification request. Mail your unit with payment plus shipping and precise instructions.''

Depending on the model, the company charges from $40 to $115 to make the changes to pick up cellular signals. Grove said the company does not get many such requests ``because there are only a few scanners presently being sold that can be altered.''

The company will modify a scanner only after it has been sold.

Mil Air freqs -may- be available via the Web site:

http://www.rmii.com/~rmedic

If you are local to Denver, try picking up the frequency guide "Scan Colorado" a statewide directory that includes Mil Air. This is available through many news stands, or through Ham Radio Outlet.

If you live closer to Colorado Springs, stop by Centennial Electronics for a copy of my "Frequency One". This is more a regional guide to the area surrounding Pikes Peak, but includes many Front Range Mil Air frequencies, as well. For ordering info, check the Web site:

http://ourworld.compuserve.com/homepages/Scan_PikesPeak

>> large FAQs.
Phone Charges possibly (no free local calls in the UK.
AOL may be his ISP and that might be his problem.
FAQ's are a fact of life on Usenet so, although I sympathise,
he needs a different news reader and if his ISP news server
doesn't allow this, then another ISP also.

>> Let's rethink scanner FAQ posting schedule.
>> What should it be? Comments?
It really comes down to the expiry policy set on the individual news
server and the expiry policy set on the person's news reader.
You can't cater for all:-(
I personally think that a general monthly FAQ is fine and that the
more specific FAQs should be made available by ftp with pointers
and index in the general faq. The reasoning for this is that a lot of
people as about specific items and they could be pointed to the
ftp site. Better still if the FAQs could be on a web page as well:-)

just a few thoughts...

Bob.

I purchased a radio antenna splitter at Radio Shack and installed it and have had exceptional results. I did notice the splitter labeled for AM and AM/FM on the two outputs, but have noticed no issues related to such. (It's been awhile since I put in the splitter so I'm a little rusty on what it said exactly)

I can pick up the Missouri Higway Patrol Troop E headquarters from as far away as 65 miles or better and get exceptional reception on the repeater frequencies.

Good Luck!

From the new FAQ "REPAIR TIPS: RADIO SHACK SCANNER RADIOS:"

[...]

GRE-Made Base Models: Dim Backlight |

The backlight in many base models, including the PRO-2022,
PRO-2004, and PRO-2005/6 is implemented by an
electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is
designated EL-501, and is identified by Radio Shack part
#10800050. A new EL panel can be ordered through your
local Radio Shack store and sent to your home for about $12
plus shipping. Radio Shack no longer sells replacement EL
panels for the PRO-2004.

Replacing the backlight is an operation which requires care
and patience. The service manual has an exploded parts
diagram which is helpful in showing how to disassemble the
scanner.

Well, I don't think you sound like a moron, I just think that whom ever
replied took your "for example" to be the frequency you literally wanted
to listen to.

The best way with the 200xlt is to enter the frequency exactly as you
have it, and let the scanner decide how it will round the frequency to
three digits... Sometimes it will display something like .XX3 when the
freq is .xx35 or sometimes it will round to the next freq ending in .xx5.

1982. Store Detective - off subject

I know it has nothing to do with scanning, but I thought that it would appeal to the sense of humour of the inhabitants of this group:

Last night I visited my local supermarket to get some milk & bread. As I walked to the check-out, I noticed a man acting very suspiciously.

I decided to follow him in the best "Dick Tracy" fashion. He seemed to be hiding from someone and then would creep to the next set of shelves. Sometimes he would reach out and take something from a shelf without looking and put it in his basket. His behaviour was really weird.

He was totaly unaware that I was folowing him with great interest. I followed him back and forth for about 10 minutes and when he took a sudden rush to the checkout, I did likewise but about 10 checkouts away.

I explained what I had seen and suggested the checkout girl called the manager - she did - I explained again what I had seen and suggested that the store detective be called.

The manager smiled benignly and said "Thats Ok sir, he IS the store detective!"

Show all of what features? I have one of these and know all the features
that it has, i don't think there are any that im missing....

I personally don't think that the Uniden Trunk scanner will be that great
of an improvement over what is already available. I scan 800Mhz systems
with my current scanners with little difficulty. I just find most PS
trunked systems boring to monitor.

Daniel, I am thinking of purchasing a AR-8000 and hope you can share a bit of knowledge with me. I have a problem currently with intermod on my present scanner (A double conversion Radio Shack PRO-39 hand held).

Is the 8000 good at rejecting off frequency signals?

How fast does the unit scan stored frequencies? How fast does it search through it's VFO?

I understand from reading on the net that the band-plan can be modified by the user with computer control interface. Is this true? Can the unit receive continuous through the 800Mhz band. Can the step size be set to 30Khz? As you may guess sometimes I listen to the cellular phone frequencies, and while that is not why I want the radio (I have three radios that do that already) it irks me to no end that the government dictates what airwaves I can and cannot listen to, and I won't buy a radio that has been forever hobbled.

Thanks so much for taking the time to reply to this post.

I agree regarding the scrambling and broadcasting, but the ECPA DOES make it illegal to listen to cellular telephone calls, regardless of your opinion on the matter. It has NOTHING to do with copyright or tresspassing!

The Cellular industry invested a lot of money and bought enough politicians to make this farce into a law, and that is the fact whether we like it or not. It makes no difference that it is a nearly unenforceable law!

Yet, here we have an apparently clear and blatant violation and nothing concrete happens. Even if anything DOES happen, it won't get the press coverage. This is probably the FIRST smart thing anyone has done in connection with this idiotic ignoring of the laws of physics. If you can't vote it out, ignore it altogether! Then 50 years from now it will get dropped with all the other stupid laws like the ones regarding parking your horses on the sidewalk on Saturday night.

Next, it will be legal to fart on a street corner, but illegal to smell it or tell anyone else you smelled it.

"DESIGN DATABASES AND DRIVE MICROSOFT ACCESS"

Last year I taught a night school class which deal with
database design and the use of Microsoft Access.

The students were mainly business people wanting to make
practical use of either Access 2.0 or Access for Windows
95. Some students wanted to be able to manage hobbies or
sports organisations.

Their first problem was to design their database, then
they wanted it in action as quickly as possible. Existing
textbooks were expensive, did not deal with design, and
contained more than the basic essential information.

The notes I wrote as courses proceeded have
been compiled into a learning guide for those who want to
build a database quickly.

Should you be interested in a copy of the learning guide
"Design Databases and Drive Microsoft Access"
the cost is US $29.95, which includes package and postage.
Just send a cheque or credit card number, expiry date and name.
Do not forget your name and address for postal delivery.

My address is:

Robert Shaw
49 Sea Vista Drive
Pukerua Bay
Porirua City
NEW ZEALAND

Comments on the usefulness of the book are most welcome.

Tis true! You can modify your radio until it picks up scrambled Secret Service comms! (good luck in doing so) It is legal to modify! Just not so to listen. Go figure. Otherwise, if it was illegal to own a scanner with cell capability, Commie Clinton and his Buddies would have made us turn our scanners in already. (yea right, like that would happen)

One certain RS Scanner only requires a special keystroke turn on combo to
get Cell Phone reception in the search band. Bet that they were using that
handheld scanner. NOTE I have one of these and have tried the Key combo
powerup and it
does Work mine was bought about 8 month ago and even more recent ones have
this same ability as far as I know. So technically the Shark (sorry
Lawyer) is right
the scanner wasn't modified.

I don't know the keystroke anymore.

The ECPA (1986) was passed by Ronnie Raygun. So it was Ron that made
some radio monitoring illegal (in the USA!)

I've read in a magazine a few years ago that the states that make having radar detectors illegal, can use that as a reason to ticket you or confiscate your scanner. I heard Florida is one state that does that but don't know that for sure. Better be careful when crossing state lines.

I admit my knowledge of trunking is limited...I live in an area where no public safety trunking is currently in operation. But I do have questions about this trunk-tracker.

Will it include the data channel in the scan list while scanning conventional channels? Let's say my local sheriff's department is on a huge public safety trunking system, with other users. I want to monitor sheriff and fire traffic on that trunking system, but I also want a few (or more) cnventional channels in my scanlist. Does the trunk-tracker account for this, or must I get two different scanners to listen, one for trunked, one for conventional.

It seems like if you missed any part of the data on the data channel, your hopes of following a trunked conversation would be limited. In which case, if you're doing trunking, you really need to sit on that data channel so you can figure out where to tune in for analog voice comms.

I haven't seen any information posted which addresses my questions, and I figure others might be interested as well. Please post to the net if you've got a reply.

The opto board will not work with nor adapt to the 2004. You will need
to try the CE 232 from Commtronics Engineering. You own one of the best
scanners ever made solidly built with a good metal case.

The beacons you mention are used for navigation. The usual international callsign allocation doesn't always hold true in this area.
I dont know if it is still there but there used to be a beacon on Nantucket island, Mass. that used the call TUK and was on 193.0khz or thereabouts. These beacons were usually listed on charts and almost never coincided with international callsigns when in the western hemisphere. I hope that is helpful.

USA Today said it was almost impossible to hear cell calls on todays
scanner and very hard to follow a convo.
Not true, most scanners get images off the cell band (894-915 on my BCT
7) and i've followed convos just by flipping the cellfreqs i do get.
i mean, not me, my dog does this.
And it's easy to record using a microcassette just off the speaker.

Why do you assume he sold it for "too low" a price. Don't you think the 2006 is a popular and reliable radio that will sell fairly easily without having to settle on a sacrafice price? I see several WTB's a month for the 2006. I'm not surprised it sold quickly.

Not too bad ?!?! That's TERRIBLE!

Tell me, how many PAYING, LEGITIMATE subscribers get dropped
every day due to this system?

I sure don't want to be your liability insurance carrier when some lawyer's
daughter is raped and killed when she gets lost and wanders into a bad
neighborhood in her father's Mercedes because the system didn't let her
stay connected to get directions...

Just my opinion, but I sure think it sucks when some "new" and "great"
technology makes life more difficult for the average person in the name
of saving money for some large corporation. Encrypt, authenticate, that
is fine, but using marginal technology to shut down phones is WRONG.

RF Fingerprinting has been in use for over 2 years now throughout the states. Corsair (TRW Wireless in the old days) was the first to go on line with RF fingerprinting in NY and LA. It is the fastest growing company in the RF Fingerprinting business. The other competitor, CTS makes a similar product called the 'Blackbird' and it is expected to be online throughout the country in certain markets. The false drop rate, believe it or not is < 1% of the total subs in any carriers network. Thats not too bad. And even with the small nuances of temperature and battery voltage, it still has a good hit rate on the real cloners. You have to remember, it doesnt only go by the RF, but also looks as th MIN/ESN combo as well as Manu. code signature that is inherent to each Manu.'s product line. If you clone a Motorola with a Nokia, they are totally different in signature and its easy to catch them...

>What should it be? Comments?

Bob, the first _neat-o_ thing I ever saw on the 'net 3 years ago was
your FAQ. I think the traffic here warrants the bi-weekly posting. If
these ng maybe posted 25 articles per day (with NO ONE asking the same
old Qs) I could see a monthly posting being ok.

Imagine the increased load of questions & answers that lack of the FAQ
would impose on our friend..

> differently than most scanners.
.....and as you said and the writing on the front says it is a receiver =
not a scanner.
>=20
> Of major frustration to me was a RF relay that "clicked" when you
> switched frequencies above or below 500MHz - this was maddening in a
> quiet room.

That is a fact. The obvious solution though is to listen to 5 other =
receivers or
scanners at the same time. :-)

>=20
> I added a really nice accessory to it which gave it shortwave
> capabilities and another 100 memories - so I had full coverage in one
> box.

What was that? Did it actually do a good job on SW?
=20
> But - as soon as I saw the AR8000 with its 1000 memories, computer
> interface, and alphanumeric display -- the R7000 was history! No =
regrets
> here.

I usually operate my R7000 under the control of a computer so I would =
have to say
IMHO it can do most of what any other SCANNER can do and maybe a few =
things more.
I have unlimited memories, more scan modes than I can remember, spectrum =
analysis=20
band tracking and much more. If something comes along that I don't have =
I'll just add it
to my control program if I want it. :-) =20

The R7000 is a most decent radio for many people. I am quite pleased =
with mine and as others=20
have said, I don't plan on letting it go. Different strokes.

Not a literal read.... The Fourth Amendment does not mention that it
applies only to the government, unlike the first where it specifically
states "Congress shall make no law...". That aside though, the Fourth
does mention the word "Unreasonable". Is it all that reasonable to
write a private message and stick it on a bulletin board, face open, for
the person it is addressed to, and expect noone else to read it before
the addressee picks it up?

Be that as it may, the FCC sure seems to enjoy making a big splash any time they bust a Ham operator, Scannist, or CB'er that's gotten out of line. I can think of no valid reason that this particular case shouldn't be persued, given it's blatant disregard for any number of laws.

Mark

Of COURSE it's my opinion.
Whose else would it be?

If this is true, then it simply proves that there are MANY laws on the books that should be repealed, and making new laws should be VERY hard... maybe a 2/3 vote.

As I think Robert Heinlein said, "Bad laws diminish respect for all laws." And ECPA is bad law.

HOWEVER...
what this couple did was illegal under the Communications Act of 1934, not just ECPA.

"Hang 'em", or repeal the law.

Source record: 211387

Im new to this scanner stuff so forgive me if I ask some dumb questions. I have been looking at some
scanners, I have a gift certificate for Service Merchandise so I need to buy one of the following:

1. Uniden SC150
2. Uniden BC148 XLT
3. Uniden BC860 XLT
4. Uniden 350A
5. Uniden BC60 XLT1

My questions are: (I know some of these are probably dumb questions but this is all new to me

1. Will these scanners pick up cellular phone and cordless phones??
2. What is the range for most scanners??
3. The SC150 says it picks from 806 to 956 MHz (Public SVC band, except cellular band) does this
mean it will not pick up cellular phones.
4. Do the hand held scanners have the same reception? (of the models above)
5. Can you buy outside antena's or amplifiers?

Any Information will be greatly appreciated,
Jason

Of course they do. These servers require user authentication; a record
of logins/posts is available to the server's admins at any time. (IIRC,
there were usenet spams from Altopia during the time I was there and
Chris Caputo, the admin, killed the account.)

Your your "right to privacy" means the government cannot invade your life without due process. It has nothing to do with some idiot using an insecure form of communication to divulge his personal secrets.

2036. Trunked Scanners Finally Here...

Newsgroup: rec.radio.scanner
Date: 1997-01-17 00:00:00 UTC
From: David Pinero <dpinero@pobox.com>
Message-ID: <32DF7387.290A@pobox.com>
Source record: 211394

I've been reading the groups about the new TrunkTracker. We all know that Uniden has a model that will apparently "do" Motorola, but I have seen at least one post someplace that says they also have a working prototype for the dreaded GE Ericsson system.

Some folks believe that Uniden got the info to build these scanners so that the trunked manufacturers could profit from forcing PS agencies to go digital (thus spending more money). I agreed with that until I thought about it some more. True, they can now milk PS agencies for more money by selling digital, but even if not -- why NOT sell trunk capable scanners? After all, it's a MYTH that trunking exists for "more security". It was a secondary sales issue to begin with. There are a lot of private industries that used trunked radios and should be scannable. So why all this offense by PS administrators? If you bought a trunking system soley because you thought it would increase security and rid yourself of scannerists, too bad. You just found out what a sales pitch is all about!

As scannerists, I do believe we will lose the control issue. After all, PS agencies will go digital, and not even a TrunkTracker is going to be able to help with *that*. That's why it's important now to advocate proactive measures by PS agencies to ensure that somehow the public can still listen in. Visit my web site for an issue brewing in Hillsborough County, Fl. for an example of what I'm talking about. ;)

Dave
http://www.pobox.com/~dpinero.

2037. CES: Uniden Trunktracker

Newsgroup: rec.radio.scanner
Date: 1997-01-17 00:00:00 UTC
From: slogan@northlink.com
Message-ID: <slogan-1701970028170001@pm1-20.northlink.com>
Source record: 211395

The 235 is related to the the current 230 handheld. Pricing should be $50 more than the current model. Here's the info on the flyer from Uniden:

300 channels in ten 30 channel banls
12 bands including aircraft, 800 Mhz, & Service Scan
Pre-programmed Service Search for police, aircraft, fire, emergency, marine, &
weather
Trunk Scan & Scan List
Trunk Search, Lockout, Delay (5 seconds)
CRX-120 Battery charger/stand, 2 rechargeable battery packs (10 hrs. each)
10 priority channels
Manual channel access
Memory backup (3 days)
Programable Search
Channel Lockout

The Base/Mobile 895 is related to the current 890. It will includes CTCSS capability, trunk tracking, and reportedly a RS-232 port. While the portable only does Motorola reportedly the 895 will also do GE trunking by incorporating the Gee-Whiz circuitry. The unit on display was not functional. No word on pricing.

Per Uniden representatives at CES the portable should ship by April. The base/mobile in the 4th quarter. The follow on units to the 3000 & 9000 should not be expected this year.

Also saw RELM at the show. They were showing their mobile, due second quarter. Pricing is reportedly very near the HS-200 handheld. The mobile is 200 channel,
Alphanumeric, and has an RS-232 port! Like the portable it is to be manufactured by Yuperitu in Japan.

EDCO was at the show showing AOR scanners. They report the AOR-7000 is in the warehouse but waiting for FCC type acceptance. Price will be $1399 MSRP. The AR-16 has been delayed indefinitely.

Since I live in a rural area where trunking is not an issue I was most excited by the Relm mobile. If I lived in a metro area I'm sure I'd be adding a Trunktracker to my arsenal.

The reality is that taping the conversation and giving it to a third
party is not just illegal under ECPA '86, it's illegal under the
Communications Act of 1934. So even if ECPA had not been enacted, what
they did would STILL be illegal.

Let's see if they enforce the laws already on the books, before they
think about making some more laws.

This was an egregious violation of SEVERAL existing laws. The people
that did it should be prosecuted to the fullest extent of the law.
No new laws are needed, if they will enforce what they already have in
place.

From Whom? Where?

"The right of the people to be secure in ther persons, houses, papers,
and effects, against UNREASONABLE searches and siezures, shall not be
violated [...]"

If I recall, in a case involving a cordless telephone, it was ruled
by the judge that it is UNREASONABLE to think that your call is not
being overheard, when you are talking into a phone with an antenna
on it.

Sheesh! And the conservatives flame the liberals for their wanting
to look after everyone else because the liberals feel that people
aren't responsible enough to do so for themselves. [sorry, but since
folks insist on keeping this discussion political, I decided to do so
too.]

Here are some repostes...of mods...:

Newsgroups: alt.radio.scanner
From: interpol@casbah.acns.nwu.edu (Interpol)
Subject: Uniden Bearcat 200XLT Scan Speedup Modification
Message-ID: <1992Mar13.182158.11346@casbah.acns.nwu.edu>
Sender: interpol@nwu.edu
Organization: Northwestern University, Evanston, Illinois
Date: Fri, 13 Mar 1992 18:21:58 GMT
Lines: 80

Speeding up the scan/search rates for the Uniden BC-200/205 XLT
You will need a small crystal or ceramic resonator in the 600-800
kHz range.

1. Disassemble the unit to access the microprocessor area.
a. Slide off the battery pack.
b. Remove the two screws from the rear of the scanner and the
two screws that hold the battery retaining spring at the
base. Then remove the spring.
c. Carefuly pry the bottom of the rear cover from the scanner
and remove the cover.
d. Locate the two small screws at the base of the circuit board
and remove them. Gently pull the front panel from the main
frame at the base and separate them. If you separate them
between the two layers. Remember that for later reassembly;
the pins will have to be lined up perfectly before you slip
the sections back together.

2. Search around the logic/CPU board (Uniden calls it the "MICOM
PCB Assembly"), and locate Y-201, which is a little
rectangular
component. This is the stock 400 kHz resonator. Your
replacement can be a bit larger if necessary, but not grossly
so.

3. Carefully desolder and remove Y-201. Put it in safekeeping because you may want it for something else someday.

4. Install (solder) your newly procured replacement clock resonator, be it a crystal or another ceramic resonator, where Y-201 came out.

5. Reassemble: Insert top of the front panel into the slot under the volume/squelch control panel. Carefully noting the alignment
of the dual in-line connector at the bottom of the board with the mating socket, press the front panel firmly into place. Be
sure that the holes at the bottom of the circuit board line up two screws and tighten them

6. Replace the rear cover by inserting the top of the cover into the slot under the VOLUME/SQUELCH control panel. Press cover into place. Insert and tighten the screws.

7. Reposition the battery retaining spring (slotted side toward notched hole). Insert the two remaining screws and gently tighten them.

8. Slide the battery pack into place. Switch scanner on to ensure that the display comes on. If not, the battery may be discharged or the dual in-line connector may have been misaligned during reassembly (step 5). Another possibility would be that the new resonator either doesn't work, is unsuitable, or may have been incorrectly installed. Another possibility (if you installed something greater than 800 kHz is that it's just too fast.

Assuming that the display comes on, leave the antenna disconnected,
and run a speed test. Speed in channels-per-second equals the number of
channels divided by the time in seconds. Using a Murata-Erie 800 kHz

Note that the channels must have frequencies programmed into them.

"Empty" or 0000.000 MHz channels run faster and throw off the calculation.

In addition to the shortened delay time, the user reports that the

panel lamp will "time out". Doubling the clock frequency halves the "light on" time. There is a variable extended delay modification in the
"World Scanner Report", to large to duplicate here. Also, in Volume 1,
Number 4, Bill Cheek reports that the UC-1147 CPU has the necessary large chunk of memory on board, so you're stuck with 200 channels. You

can get the WSR from:

COMMtronics Engineering
PO Box 262478
San Diego, CA 92196

The Scanner Modification Handbook I and II are available from the same address. They're something like $17.95 each + $3 P&H. The WSR is
$25 per year.

NOTE : I am not responsible for anything that goes wrong. Note that this

Newsgroups: alt.radio.scanner
From: interpol@casbah.acns.nwu.edu (Interpol)
Subject: Uniden Bearcat 200XLT Battery Indicator Modification
Message-ID: <1992Mar13.185815.15749@casbah.acns.nwu.edu>
Sender: interpol@nwu.edu
Organization: Northwestern University, Evanston, Illinois
Date: Fri, 13 Mar 1992 18:58:15 GMT
Lines: 161

Here's some mods to help remedy the 200XLT's low battery indicator/blank out
feature, courtesy of Bob Parnass:

BC200XLT LOW BATTERY FIXES
Troy T. Pummill, N6XMV

Here are two small articles from MT. I have not tried these mods, do so at your own risk (i.e. your milage may vary).

From Monitoring Times
Bob's Tip of the Month
May 1990, page 98

BC200XLT SHORT BATTERY LIFE SOLVED

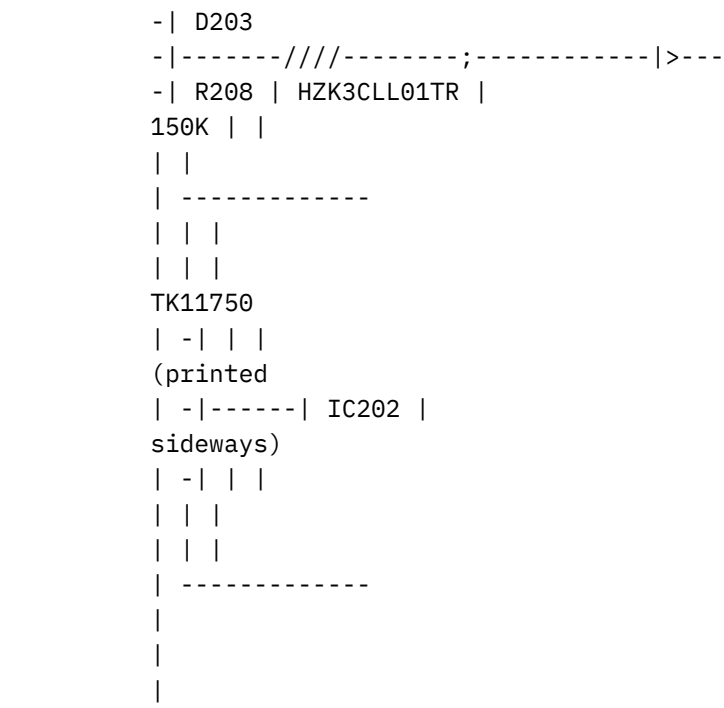
Short abttery life--sometime only an hour or two between charges--seems to be the only major complaint amoung owners of the laeading hand-held scanner, the Uniden Bearcat BC200XLT. Presumably, owners of similar sets like the BC100XLT BC205XLT, and Cobra 4030 could have the same problem. Now that is an ailment of the past.

It turns out that the batteries were not really at fault; a zener diode which determines the voltage at which the low-battery indicator would come on was defective in some units, causing the circuit to actuate prematurely. Replacing that idode and changing the value of an associated resistor provides the answer.

FREE FIX

MT contacted Uniden and was assured that they will provide the fix for free, even if the radio is outside of the one-year warranty period. If your Uniden BC200XLT suffers from short battery life, send the radioo along with a brief note describing the ailment, to Uniden Customer Service, 9900 West Point Drive, Indianapolis, Indiana, 46250.

As shown in the accompanying diagram, zener diode D203 and resistor R208 are the parts in question. D203 should be about 7 volts and R208 should be 150,000 ohms. These are miniature surface-mount devices on double- sided circuit board; if your radio is under warranty, attemping this fix yourself will void that warranty.



SHORT CUT

Mark Machcinski of Wyandotte, Michigan, came up with hisw own solution. He simply soldered a wire bridge across diode D203, disabling the low battery indicator entirely. The radio now operates uninterrupted until it blanks out when the abttery level drops to about 4.5 volts.

Yet another suggestions from a Canadian reader would bridge the original diode with a 6.8K resistor, defeating the premature recharge signal, yet preventing the battery from too low a discharge.

From MT
June 1990, page 98
Bob's Tip of the Month

BC200XLT BATTERY LIFE EXTENSION: Part II

Every time we run a helpful hint on a popular product, someone find an even more helpful hint! This one disable the low battery cutoff circuit and adds several hours of operation to a single charge. Our lab unit was still going strong after seven hours straight! Uniden will provide the fix for free, but if you're in a hurry and don't mind voiding your warranty, read on!

NOTE: This modification should not be attempted by anyone unfamilier with small circuit oard components.

The tools: You will need a small Phillips screwdriver, fine-tip soldering iron and solder wicking braid.

The procedure: Remove the battery pack, then the two screws form the bottom spring clip. Carefully pull the rear cover off, bottom first. Remove tjhe two small screws at the base of the circuit board. Pull the front panel away from the mainframe, bottom first.

At the bottom of the remaining board--to the left of the speaker magnet--are two blue electolytic capacitors; just above them are two striped components-- one resistor and one diode. Using the soldering iron and braid, carefully remove the two components without overheating the board or damaging the copper traces.

When you reassemble the radio, be very carful to note the insertion of the front panel into the slot at the base of the volume/squelch panel. Be especially careful to align the screw holes perfectly, allowing the two rows of fine pin contacts to mate correctly with the socket. If this is not done correctly (and it probably won't be the first time!) no damage will occur, but the scanner display will be blank.

Recharge your batteries after 6-8 hours of heavy use. If the scanner dies, recharge it as soon as possible to prevent loss of your memorized frequencies.

Newsgroups: alt.radio.scanner
From: interpol@casbah.acns.nwu.edu (Interpol)
Subject: Uniden Bearcat 200XLT Cellular Restoration Mod
Message-ID: <1992Mar13.190511.16655@casbah.acns.nwu.edu>
Sender: interpol@nwu.edu
Organization: Northwestern University, Evanston, Illinois
Date: Fri, 13 Mar 1992 19:05:11 GMT
Lines: 105

Yet another Uniden/Bearcat 200XLT modification, courtesy of Bob Parnass and
other good people:

BC200/205XLT CELLULAR RESTORATION

Note: It is unlawful to monitor cellular telephone conversations. It is
possible to monitor signals from the deleted ranges even without conversion.
Simply add 21.7 MHz to the deleted frequency and enter the higher (image)
frequency. Reception is virtually identical in strength to that which would be
heard on the deleted frequency.

The frequencies deleted at the factory may be restored, but the procedure must

not be attempted by anyone unfamiliar with electronic circuitry. Grove Enterprises assumes no liability for damage caused by this procedure. The modification will void your warranty.

TOOLS REQUIRED: Small Phillips screwdriver, small wire cutters.

1. Slide off the battery pack and remove the antenna from the scanner.

2. Using a small Phillips screwdriver, remove the two screws from the back of the scanner, the two screws which hold the battery retaining spring at the base and the spring itself.

3. Carefully pry the bottom of the rear cover from the radio and remove the cover.

4. Locate the two small screws at the base of the circuit board and remove them. Gently pull the front panel from the mainframe at the base and separate them.

5. Locate the (64 pin quad flatpack) microprocessor IC labelled "UNIDEN UC-1147" and the 10k ohm (brown-black-orange) leadless resistor positioned above the letters "DEN" on the IC.

6. Using miniature wire cutters, cut the resistor body in two without disturbing anything else near it. If the left solder pad comes loose, it may be peeled from the board. Brush or blow away any residue. This completes the restoration.

REASSEMBLY

7. Insert the top of the front panel into the slot under the volume/squelch control panel and, noting carefully the alignment of the dual inline connector at the bottom of the board with the mating socket, press the front panel firmly into place. Be sure that the holes at the bottom of the circuit board line up with the holes in the plastic standoffs below them.
Insert the two screws and gently tighten them.

8. Replace the back cover by inserting the top of the cover
into the
slot under the volume/squelch control panel; press the cover into
place, insert
and tighten the screws.

9. Reposition the battery retaining spring (slotted side
toward notched
hole), insert the two remaining screws and gently but securely tighten
them.

10. Slide the battery pack into place; switch the scanner on
to make
sure the display comes on. If not, the battery is discharged or the
dual-inline
connector was misaligned during assembly (see step 7).

Assuming the display comes on, press: MANUAL, 845.0, E; within two
seconds, the
frequency 845.000 should appear on the display.

Here's the last of the 200XLT mods I know of...downloaded off of a local BBS
here in Chicago:

Modification for Putting BC-220XLT In AM Reception Mode

I have come up with a crude mod for the BC200xlt scanner to allow AM reception in the 136 to 174 range. Why would I want AM in this range you
ask? well I attend several Air shows during the year and the Thunderbirds
use 140 mhz area fregs. As we all know the Uniden switches to FM in this
range, causeing very distorted reception (slope detection). Somebody else
may have already thought of this idea (you?) but here goes. Break the AIR
Trace between dual diode D31 and IC1 pin 8. Connect the center of a single
pole - double throw mini switch to the trace leading back to IC1 pin 8.
Connect one of the other poles to the trace leading back to D31. This is the
"Normal" mode(This just restores what you have cut). Now connect the other
pole to the VHI (VHF HI) line at a easy to locate point. This is the "AM"
mode. What will happen now is when AM is selected the VHF and VHF air band
will all be in the AM mode. UHF and others are not affected. When in the

normal mode everything is just like it always was. I have done this
mode
over a year ago so it's still a cloudy in my memory. But it works like
this:
The microprocessor sends a high to Q7 to select the AIR mode, by
routing the
VHI signal around D31 by means of the switch the AM detector is
reselected.
Normaly D31 blocks out the VHI signal allowing FM in the VHF HI range.
I
hope my explaination of this mod is clear. It does take some delicate
surgery to do. I also hope I haven't duplicated anyone elses idea.

Thanks

The volume level is fairly critical. Try the Trace feature - it will reveal if
the data is being received with errors.

The only pagers I've decoded use 512 baud. Perhaps the ones in your area are
1200 or 2400 baud. Future releases of SemaSoft are supposed to handle the
higher rates.

Take out a few minutes and park near the drive through. Look at who
eats what. Young ladies eat chicken. Big guys in pickup trucks always
get bacon on their burgers. Eventually, a system using artificial
intelligence will be able to place your order just by looking at your
face and what you drive.

My comment was not political, it was factual. I took a semester of
Constitutional Law as part of my Criminal Justice major - recently.
You may not want to believe it, but the U.S. Supreme Court does indeed
believe that the 4th Amendment can be construed as giving us a right
to privacy. There are several places online where you can research
the precedents, not to mention your local university or law library.

> --
> Jim

I put one of Grove's $20 Onmi II antennas in my attic last week. It has only two elements, one about 6-7' and one about 3'. They form an antenna that's essentially a 10' element. Connected it to my handheld with a 50' chunk of cable (also from Grove) that has F connectors already attached, and a F to BNC adapter. Had it mounted horizontally at first, but that didn't work too well. My attic space isn't tall enough to mount it completely vertically, so now I have it at a 45 degree angle.

Now I can receive the local airport, about 10-12 mile away, fairly well. With the rubber duck, all I got were a few scratchy fragments.

Mike

Okay, I realize that this is not strictly scanner-related, but I figured I'd ask here anyway and see if people can't point me somewhere else..

Lately, I've been reading the columns in Monitoring Times and PopComm about utility monitoring, and have been feeling slightly left out. It strikes me as being quite interesting, and I'd like to get involved - the only problem is that none of my scanners go below 30MHz.

I took a quick look through the Rat Shack catalog, and spotted only one receiver that will do LSB and USB transmissions. Does anyone have other recommendations about types of receivers, costs, desirable characteristics, and whatnot? I don't want to spend great heaping gobs of money (DejaNews shows Yaesue receivers going used for ~$1100; this I *don't* want to spend), so if I could get a reasonably priced unit, I'd probably buy it.

Ideas?

w0zz (wozz@wookie.net) wrote:

: I'm considering the purchase of an AOR AR-8000 but I'm a bit confused by
: the computer interface that is provided with the system.

There is no computer interface sold (as standard) with the AR8000. You need
to purchase a separate unit that transforms the signals, voltage levels and
connector to RS232/v24.

The best such unit that I have ever seen is the OptoLinx interface from
Optoelectronics. It allows your computer to interface to any ICOM-style
CI-V unit, the AR8000/2700/3000, a GPS receiver, an Opto Scout plus it provides
tape relay control and a HAMCOMM-type data slicer for FAX/RTTY/pager decoding.
All in one unit, price $129.95. Unbeatable! (I have one!)

: If i want to hook my AR-8000 up to my computer and control it with ScanCat
: or a similar package what do I need?

You need (besides the computer and the AR8000) you need a computer interface,
like the OptoLinx and a serial cable.

: I plan on getting the Scout reaction tuning modification

DO NOT ... repeat DO NOT ... have your AR8000 modified to interface to a Scout.
Anyone advising you to do so should be lined up against a wall and SHOT (ie.
go for a stroll in LA at night ;-).

For the last year or so (at least) it has been possible to plug the Scout
right into the computer control port on the AR8000 (no interface required).
The kit that allows you to do this is called the SAC-8000 and should be
available for $29.95 from wherever you buy the Scout.

: but I've also seen several mods mentioned to control the scanner via computer

No mods are required to control the AR8000 with a computer.

If anything needs mods, its the god-awful crappy scanner software that people
dare sell for $100 (eg. ScanCat).

: had a serial interface that could simply be hooked up with a serial cable.
: Is this true?

No. The interface is required.

Daniel.

AFAIK, America is far behind Europe and there simply _isn't_ a digital cellphone network.

I'm looking for information on getting an Optoelectronics RS-232 interface to work in a Pro-2004 scanner. The Card is made to plug directly into a Pro-2005 or 2006 but it seems that you can "pin-out" the connectors and get them into the right places on the 2004.

Does anyone have information on how to get this done... I've attempted contact with OPTO here in Ft. Laud and they are a bunch of ASSES!!! They don't want to help... they claim that they don't make a board for the unit and don't care to support it... nice business practices huh...

So if anyone has any ideas please help...

Thanks,
ML

It's hard for me to imagine that someone with a ham license doesn't know what the VLF band is used for!

Airports large and small transmit "omni" beacons in this band. Aircraft use these beacons to navigate. Some of the stations also broadcast weather along with their beacon. The aircraft radios use a filter to select between the beacon and the voice. The three letter callsigns used by these stations designate their location. It's very unlikely that you were hearing European stations at those frequencies.

Europe also uses this band as a broadcast band, much like our own AM broadcast band.

The 160 to 190 kiloHertz range is a license-free band in the United States. Operators in this band are refered to as "lowfers." A maximum power out put of 1 watt (any mode) and a 50 foot antenna, including the feedline, iare permitted.

The frequency of 500 kHz is (was?) the high-seas emergency frequency. This may be discontinued by now.

I'm certain that if you browse the 'net you can locate a listing of the omni beacons callsigns with their locations. Winter is an excellent season to DX those stations.

Good listening, 73.

Excuse me, Jungle Jim, but HUH???

1. Your formula will NOT give you the 1/2~ of the coax, but will give you the lenght for 1 wavelength.

2. It doesn't make a damn whether the coax is 1/2, 3/4, 1/7, or whatever wavelength the loss factor is always going to be the same.

3. RG-58 loss per 100 feet is as follows: 3.2db @ 50mHz, 6.4db @ 200mHz, 9.0db @ 400mHz, and 14.5db @ 1000mHz.

4. Every 3db loss cuts the signal strength in half.

One of the news reports had an interview with the female of the pair of "interceptors". She claimed that they were listening to the scanner while they themselves were in their car. The scanner was *recently* purchased at RS, indicating that it must be one that cannot by design receive cell freqs (although of course image reception is possible). She said they recognized Gingrich's voice and turned on a handheld voice-activated tape recorder - not an uncommon thing for many people to have handy - and simply held it near the scanner speaker. I doubt that subtleties like road noise from the originating cellphone, let alone SAT tones, would make it through such an interface.

Also note that there is nothing that says that cellphones have to be used from cars. (I use mine from stationary locations all the time --

when I'm at a client's site, rather than raising any question of long-distance calls on their system.) The originating cellphone may well have been stationary. I read a news story that quoted an "authority" saying that cell calls are ALWAYS handed off every few minutes; this simply isn't true if the caller is not moving and if the cell system isn't busy. Sounds to me like their "authority" was someone who read an article on how cellphones work in _Popular Science_ about five years ago.

sigh These "Security analysts and mobile radio experts" ought to
brush up on basic probability.

Sure, it's unlikely. But millions of cellphone calls happen every
day. I'll bet that at least thousands of them per day are overheard
on scanners. Eventually one of those is going to be a politically
sensitive call. It's a simple matter of random chance.

From Robert A. Heinlein, _The Door Into Summer_:

"By the laws of statistics we could probably approximate just how
unlikely it is that it would happen. But people forget -- especially
those who ought to know better, such as yourself -- that while the
laws of statistics tell you how unlikely a particular coincidence is,
they state just as firmly that coincidences _do happen_. This looks
like one."

> it's bingo, 1-2-3-4, it wouldn't take much to zero in on the call. But
> for this to happen by chance would be a rare situation."

No argument. But "rare" does not mean "impossible".

There's no proof here either way.

The issue of whether or not this particular cellcall could be received via "images", front end overload, whatever, by that particular scanner would seem to be easily resolvable: Find the scanner in question, take it to the location from which the Martins claimed the intercept happened, at about the same time of day, and originate a cellcall from the location from which the cellcall in question happened. Make sure the phone used for the test is on the same system (A or B) as the original. Do a few tries to get a selection of channels.

I am looking for a leather or simulated leather/plastic case
for my BC3000xlt. I ordered one from Grove but what I
got was a BC200 case. When I called back the lady said
"That's the case Uniden says to use for the BC3000". I
find this hard to believe due to the fact the keyboard, speaker
and battery charge hole did not come close to lining up.
I remember there was a company that made real leather cases
for handheld scanners. I have not seen any advertising lately.
I would appreciate any info on this matter.

I know DOZENS of people who routinely carry an Olympus Pearl-corder or
other mini-cassette recorder in their pocket, briefcase, or purse.

Including many lawyers. I can see the trial now. Prosecution claims
that the mere presence of the tape recorder indicates premeditation,
that no one would POSSIBLY have a tape recorder that close at hand
otherwise. Defense asks to check prosecution attorneys' personal
effects for note-corders, and finds one recorder per person, not to
mention one or two digital memo-pads. Reporters and others in the
courtroom, grinning from ear to ear, raise their recorders in the air.
Prosecution is laughed out of court. Biggest legal faux pas since
the great "the glove didn't fit" farce.

I'm in Kansas. We don't have scanner police here.
I've used my scanner in both OK & TX and never had a problem, but I don't
know the laws there.

They both have CCW laws (KS does not). I assume they also trust their
citizens to carry concealed scanners!

Joe,

You assume that the equipment was modified. I own three scanners that have this capability that were purchased LEGALLY when it was to do so.

I will reiterate that these morons who have hurt the honest scanner owner should be prosecuted.

This was no accident.

Rolo.

I was able to pick up my VTech VT1900 digital cordless phone by switching my scanner to AM mode and manually stepping through the frequencies in that band. Try picking up and hanging up the phone while doing this so you can hear a difference - it will sound like a buzz at around 1KHz. I find mine spread to dozens of frequencies over an almost 3MHz range, even though my phone is *not* supposed to be spread spectrum. I believe someone else commented that it is really wideband FM. It would make sense that you would need a wide bandwidth to carry the bit rates involved with digitized voice, but I am not sure why it would need to be this wide. Perhaps someone else could answer this.

Also, if anyone knows where to find technical specs for a digital cordless phone (of any type) on the Web I would appreciate hearing from you.

I am considering the purchase of a Uniden BC3000XLT or BC230XLT. I
would appreciate any comments or suggestions.
Was wondering if the 3000 comes with charger & extra battery like the
BC230XLT?

Is there a better place to buy than Grove (catmac.grove.net)?

How much are batteries for these scanners?

Are there better ones for about the same price that Grove doesn't
have?

Thanks,

Tom Skillman

You think that's bad... You should see the Reuter's article which attributes a similar viewpoint to Rep Thomas Bliley. First the article brings up something which I see as possibly accurate, IE: a RadioShack droid saying "Absolutely can't pick up cell calls":

WASHINGTON (Reuter) - The chairman of the House Commerce
[...]
In a statement Bliley cited published reports that the store had told the couple, John and Alice Martin, that the device could not receive cellular phone channels.

Of course, we all know what experts Radio Shack Droids (tm) are and they definately must know that there is no such thing as images which can be picked up... so therefore the Representative feels entirely trustworthy to place great competence in the statement from the expert, minimum wage employee of Radio Shack when he says that it either was modified or they are lying:

``Either the Martins illegally altered the device, or the wiretapping incident didn't happen as accidentally as they led us to believe,'' Bliley said. ``Either way, it is incumbent on the FCC to investigate.''

With idiots like this, who needs Radio Shack droids? "I've driven drunk in the past and didn't crash, so therefore drunk driving doesn't cause accidents."

Fortunately, the responsibility of the investigation does not fall on Bliley's shoulders... The article starts out by stating that Bliley sent a letter to the FCC asking that they investigate. I can hear the laughter here, of the FCC ROTFL over Bliley's trust of a Radio Shack droid's expertise.

Heck, I have a Bearcat scanner that only goes up to 470 mhz, and when I punch in a certain police department (450.5) is often gets stuck picking up a nearby cell tower... The police department on 450.5 is Pleasant Hill, CA. The area where it gets cell interference is in the Concord CA, 680/242 triangle area, less than a mile from Pleasant Hill... this is an unmodified scanner (frequency wise... it has the 10 up to 16 channel modification) and

it has NO block converter attached. I wish it was true that it could not pick up cell phones, as I really would like to listen to that frequency when I am in that area. (I have never studied which frequency it is receiving, nor investigated the cause, such as mixing with another nearby signal or other cause, but it is absolutely possible.)

The frequencies allocated for Family Radio Service are:

Channel 1 462.5625 Mhz
Channel 2 462.5875 Mhz
Channel 3 462.6125 Mhz
Channel 4 462.6375 Mhz
Channel 5 462.6625 Mhz
Channel 6 462.6875 Mhz
Channel 7 462.7125 Mhz
Channel 8 467.5625 Mhz
Channel 9 467.5875 Mhz
Channel 10 467.6125 Mhz
Channel 11 467.6375 Mhz
Channel 12 467.6625 Mhz
Channel 13 467.6875 Mhz
Channel 14 467.7125 Mhz

The Motorola Sport 7 & 7x and Radio Shack FRS-105 have
channels 1 - 7 only!

The Midland 75-510 has all 14 channels

Well if he has a 900Mhz digital cordless, he won't hear anything until they make a digital scanner. Some 900Mhz freq's are available on the scanners, but not knowing anything about his phone, it could be either digital or in one of the frequency ranges that his scanner dosen't carry. Due to the Federal Communications Act, it is illegal for any retail store to sell any scanner that is capable of recieving cell phone freq's. If his phone is programed to transmit & recieve in one of those blocked areas, he won't hear anything.

Hi all,

This looks like the NG to ask my questions. I just bought a used Radio Shack Channel Pro 2036 200 channel scanner. I bought it with the thought that I could listen to the police & Fire Dept in my city (Walled Lake, Michigan). I got a copy of the Radio Shack book but their freqs are wrong(out of date or something).

So I'm looking for help in getting these freqs. Now that I've been reading this NG for a couple of days, its obvious that there is much more to do than listening to police & fire depts. Any suggestions for what I might pickup in my area would be appreciated.

This could be interesting, Thanks
Don

HI,

After all the postings on this news group, I still don't get a
feeling about the XPLORER's capabilities. A friend
of mine (owning an R10) said it was too sensitive to be useful
(capturing all kinds of junk). On the other hand, the R-10 seems a bit
unsensitive. Both AREN'T CHEAP (300$ for the R10, 900$ for the
XPLORER), so it would be wise to ask before anyone goes and shells out
300-900$ for one of these toys.
Can anyone give a hunch regarding reception range of these units, as
function of the transmitter power (both base and mobile), antenna type
(anyone have experience with directional antennas?) and line of sight?
How does the EXPLORER compare with a top of the line Scanner (100
channels per second scan rate, more sensitive and less than 400$), for
for simple as well as TRUNKED systems?

When responding, please email directly in addition to posting
here, so that no responses are missed. Please note that you
must edit the reply email address (remove the extra spaces).
This has been done in an attempt to reduce the amount of junk
mail received here from automatic mailers. Thank you.

regards,
inno

The name of the game is gain (or its complement, loss).

Antenna gain is another factor. If you have an antenna with g3db of gain,
ADD it to the cable loss.

To complicate matters slightly. - Amplifiers can be used to increase
signal levels. Usually their gain is also specified in db. Treat like
antenna gain. But be careful, they often cause more problems than they
solve.

All connectors introduce loss. And it gets worse as frequency increases.
UHF connectors introduce 0.3db (I think) loss at 30 MHz. BNC have 0.3db
loss at 200MHz, N connectors have 0.3 db loss at 500MHz.

Example:
Antenna gain is 3db = +3db
cable loss is 5db = -5db
2 BNC connectors @ 0.3db each = 2*(-0.3)db = -0.6db
system gain = +3 -5 -0.6 = -2.6db gain, or 2.6db loss
Treat this loss as others have indicated when working with signal
strength.

I have the Icom discone. It's been in storage for the last 2 years, but I had it up for several years before that. Its a good scanner antenna. It's also a good transmitting antenna, although the gain is a little bit on the low side. (Its not as obvious, but the gain also aplies to receiving.)

I've still got the coax, and yes it as N connectors, as does the antenna.

When working with VHF (>30MHz), a controlled impedence connector (BNC or N) is just about a must. The UHF connectors (pl-259) are really only good up to about 30MHz, which is about the lower end of this antenna.

about
>the fact its 75-ohms- it will work just fine.

Sure, it'll work fine, IF you can live with the signal attentuation
caused by the 50/75 ohm mis-match between the antenna and coax, and again
from the coax to the radio. Is can be about the loss as RG-8 (which is 50
ohms.)

Better yet, use RG-213 or 9913.

And get rid of those "UHF" connectors. They also attentuate greatly above
30MHz. (They were invented in a time when 50MHz was considered about the
top of the usable spectrum.) Use BNC or N connectors.

He is carrying VHF and HF radios, but they are aviation bands. VHF for
over land (about 150 mile range), HF for over ocean avaition traffic
communications.

Otherwise, his principal communications are digital via satelite, and a
little voice, also via satelite.

www.cnn.com has a link to his groups web page.

500-720MHz are the UHF TV channels. You have to put them somewhere...

Scanners wont do any good in that band, unless they can receive video.

2123. TrunkTracker: It's Here and it Works!

Newsgroup: rec.radio.scanner
Date: 1997-01-18 00:00:00 UTC
From: tswisher@freenet.columbus.oh.us
Message-ID: <5broua$sr@login.freenet.columbus.oh.us>
Source record: 211208

I've got a TrunkTracker in front of me as I write this, which I'm reviewing for National Scanning magazine, and I've got an answer for the non-believers out there who are asking if it exists and if it works..... It really does exist, and it really works, quite well.

I have to say that this thing has put the fun back into scanning. I've had more fun over the last couple of days effortlessly listening to local PD and FD traffic which was previously difficult to monitor (at best). I've monitored two working fires and a carjacking (witnessed by a police officer) from beginning to end, along with the myriad other events that one hears from a large public safety organization, and it's been a lot of fun.

I've heard a great deal of moaning that the '235 is too hard to program, and that too many "gyrations" are needed to program a trunked system. Actually, it's quite easy to program. After selecting "Trunk" mode, all one needs to do is program in the system frequencies; select type "E1" or "E2" using the "Data" key, and hit search. For Type I systems, one must also select a fleet map, common versions of which have been conveniently pre-programmed in the radio.

After hitting the "Search" key, the radio will find the data channel, and start searching. When the radio finds an active talkgroup (or subfleet, whichever you wish to call it), the ID code will pop up on the screen and you'll hear the communications on that talkgroup. Just as when you are searching frequencies (instead of talkgroups), you can hit the "Hold" key to stop on a particular conversation and stay there as long as you like. You can also enter the found ID in a scan list, lock out IDs you do not want to listen to, and so on.

I found it easiest to write down all my confirmed talkgroup codes and then program them into the scanner following the talkgroup plan used locally; since I work for a local fire department and am familiar with the plan, this makes it very easy to find a particular talkgroup by going to it manually.

I'll have a complete review in the next issue of National Scanning (due out in February).

Re: CI-V Commands

I am interested if anyone has a copy of the Icom CI-V Computer Command Manual or the Optoelectronics CI-V Scanner Command Reference.

I remember seeing the Optoelectronics commands on the net somewhere. I just don't remember where.

If anyone knows where I could get a copy of these manuals. I would appreciate a email or a reply on the newsgroup.

Also which of the two manuals is better ? I wish to design a program for the Optoscan 456 and want to know which of the manual is better for this purpose.

Thanks ... Kevin Fisher

I have been using the interface for over a year now with probe software.
I think it is great! My scan speed is 120 channels a second and some of
my scan files are 3,500 frequencies big. The computer screen displays
signal strength, delay time, all frequency information and I log all
hits into a file. As soon as you exit the program, the radio functions
as a normal scanner. My only real complaint is that there is no
downloading into radio with the opto interface. The interface that Bill
Cheek sells you can download frequencies to computer. I hope this helps
some.

I had the same problem with a PRO-2005 I previously owned. I took it to my local RS store. Radio only. No accessories. They sent it to the RS Service Center in Tulsa, Oklahoma. It cost me $60 for parts and labor. They also checked the radio out and provided a printout showing the radio met original specs.

I was very satisfied. Though some folks will say it was a steep price, the turn around was about 8 days and the price seemed quite reasonable to me.

Now, if these moronic Congresscritters had done this in the first place, we wouldn't have been saddled with this stupid, unenforceable ECPA ban on cellphone capable scanners, and perhaps idiots like Gingrich and his ilk would realize that you can't talk in the clear on a radio transmitter without a good chance that somebody is going to be able to hear you.

Kinda makes you wonder how these fools can run the country, doesn't it?

I wont bother listing all the features here. You all probably know them
better that I!

I bought this in March of 1994 so it has FULL cell coverage(Make your
own tapes of Newt!)Disclaimer: it is againts the law to listen or tape
phone conversations. Ask the Martins of N. Florida!

I have the foam container(Don't know what I did w/ the box)
Carrying case
wall charger
NiCads
Manual
Will throw in all extra Freq. book I have.
I bought this from Ace Communications.

Some features
1,000 channels(10 blocks of 100)
.5-1,300 UNITERRUPTED range(Yes, as I said CELL)
Whip antenna
Teloscopic RS antenna
Wire reel clip-on antenna
Case with clear plastic over the keys
Etc...
Condition is excellent.
If you need to know more Email me and I'll send you a .gif of the page
in the
manual that list all the features.

Make me an offer I can't refuse! I need a new metal detector!

2132. BC-890XLT/Pro-2036 Cell M

Newsgroup: rec.radio.scanner
Date: 1997-01-18 00:00:00 UTC
From: mike.balistreri@pcohio.com
Message-ID: <24.32834.3897@pcohio.com>
Source record: 211217

I have a question regarding unblocking the 890/2036 scanners for 869 - 894 MHz that I hope someone can help me with. First a li I little history . . . I found a mod in a large collection of mods that suggested a rearrangement of several tiny 100k Ohm chip resistors on the font panel/ microprocessor board. There are three of these little guys each surface-mount soldered between a pair of pads as shown below, where each =R= indicates a chip resistor. Each of these are marked with "104", a code for 100k Ohms. They are about 0.05"W x 0.08"L x 0.02"T

There are what appears to be two additional pairs of pads to the right of the three sets on which the =R='s are currently mounted. BUT, the two additional pairs might not be used with =R='s mounted horizontally, as you might infer from their present orientation! (This seems to be the case as the the top two O's on the right are electrically connected with a dead short.)

Can anyone tell me if 1) modifying the arrangement of these resistor chips will alter the frequency coverage of the radio, 2) if yes, what are the blocking/unblocking options, and 3) how do you modify them to unblock 869 - 894 MHz.

If you have a *digital* 900 Mhz phone, I don't think you'll be able to "hear" anything that is said on the phone. All you will hear is some sort of a staticy sound. Anyone else want to comment on this?

Huh????

1) Are basic boolean (from the logician George Boole)
operations any easier in LISP than, say a native assembly
language for a particular uP?

2) What kind of through-put would be required of a uP to perform
LISP compiled code ... oops - this isn't "sci.electronics.design"
or "comp.arch.embedded" newsgroups ... never mind

>

I don't know the answer to that question. But if a big 'coast guard
cutter' like the USS Uniden breaks the ice first ... is it safe to swim?

i was listening to my local police one day when the dispatcher said some to the effect of "we just had someone call in who was listening to us and he saw the car drive by his house". so i'd imagine they appreaciate the help.

>
> |\

I replaced R3 with 220 ohms for the discriminator output
from my frg9600, and it works at 100%.

I was about to modify my other interface that I use with my
FT50. This has to have the volume right up & i wonder if this
causes distortion- so I hope a lower value for R3 fixes things

I didn't realize that this was a political newsgroup... But, I may add...
What Mr. Newt and the congressman were discussing was nothing out of the
oridnary, much less against the law. The conversation had to do with
reaction to something that Mr. David Bonyer was most likely going to do.
If anything, this is a sham that these
"innocent-bystanding-good-american-mom-and-pop-apple-pie-citizens" are
being played up as heroes when what they did, if it did occur in the way
that they state, is a clear violation of federal law. And may I add, these
two aforementioned citizens are local movers and shakers in the Democratic
Party... Ulterior motives? I think not, just doing what any good citizen
would... Wouldn't you turn over a tape of your next door neighbor's
cordless call about his inside stock trading? And risk federal
prosecution?

Just my $0.02

I understand that some scanners will pick up cell frequency "images" even
though they will not pick up cell frequencies directly. My newbie
question is, how do you know if you're on a cell frequency or a cell
frequency "image"?
Also, I have a Pro-2036 which I'm learning to navigate. Any tips would be
appreciated. Is a CTCSS worth pursuing?

I think the point is, sure other people violate the ECPA. HOWEVER, the ones doing so were openly opposed to the law in the first place, and recognized it as ill advised/asinine legislation.

Now, the ones who acted on, and passed the legislation are the ones who have been caught violating it. The supporters of the law are guilty of breaking their own laws ! .. I think that's the point to be made here.

From: cold.war.relic@nota.net
Message-ID: <32e09dc0.1898700@netnews2.worldnet.att.net>
Source record: 211237

The argument by by Public servants that the what the public dos'nt know won't hurt them .....I say BS. Just remember those great words spoken by Johnny Cochran "hi we's from the government we's her to hep you" ha ha Mr. Cochran was speeching for all freedom loving Americans when he made that statemnet to judge Ito. If it is a dangerous person their after such as a malitia or the tim Mcveighs of the world they have speacial secure channels or cell or land line. But what the local blue meanys do and what they say is the publics and the media right to know. Racials slures abound many a police dept's radios as weve seen. Framing individuals to to confesscate their automobile ect.
Even here locally if your carrying a large amount of cash and cant prove where you got it THEY WILL IMPOUND IT! its already happend serveral times. Its none of their damn bussiness where you got it unless they have clear evidence that you obtained it through some illegal practice. If it were not for those little inexpensive devices such as scanners ect much more of this crap would go on. You have more to fear from the local dim witts than you ever will encounter with uncle sam. Wake up America who taxes you the most local or US? most folks never have a brush with federal law enforcement. But I'll bet the local yocalls have taken your money from time to time over 5 mph, or property taxes, or huge sales taxes such as we have. The revenue generating schemes of the state and local goverments far out way the feds and touch more none criminal element (average joe, not a malitia nut, abortion bomber, just plan old me or you. Besides police admit that most legitimate cases are cracked through citizen tips, scanners allow you to keep an eye on cops help them when their in the right and know who the criminal element is in your area. Wonderful little device of Democracy. At least uncle sam gives you a chace a wacking off some taxes legally for your mortgage ,interest paid ect. The local servants however, well there is no option in my state you got to pay all what they ask No deductions. Well sorry for getting off topic. I love scanning and we need to lobby to keep them, after all they will not ban carrying hand guns!! Has any body ever been shot with a scanner?

Hi,
I have an old uniden bc100xlt handheld scanner. I was wondering if anyone knew of a way to keep the display light on all the time. Any help would be greatly appreciated.

thanks
Bryan

2161. DEMOCRATS ORDER GINGRICH BUGGING!!!

Newsgroup: rec.radio.scanner
Date: 1997-01-18 00:00:00 UTC
From: hamilton <hamilton@dimensional.com>
Message-ID: <32E0FCF6.D4E@dimensional.com>
Source record: 211246

FROM MSNBC, 1/17/97:

WASHINGTON ï¿½ Security analysts and mobile radio experts are scoffing at
the idea that a hobbyist could have accidentally intercepted and taped a
cellular telephone call in which House Speaker Newt Gingrich, R-Ga., was
heard discussing his pending ethics violation hearing with other GOP House
leaders. Such a feat is so improbable, several experts claim, that some
level of professional assistance had to have come into play.

At the center of the controversy are John and Alice Martin, a Florida
couple who have admitted taping the Gingrich call. The Martins say they
accidentally stumbled onto the call while driving in their car, listening
to a recently purchased police scanner. The couple claims to have
recognized Gingrichï¿½s voice and turned on a hand-held tape recorder to
preserve a ï¿½part of history.ï¿½ The couple then gave the tape to Rep. Jim
McDermott, D-Wash. Someone then leaked the tape to The New York Times and
the Atlanta Journal-Constitution.

The Federal Bureau of Investigation has begun an investigation of the
taped call; the interception and disclosure of a cellular phone call are
felony offenses under federal wiretap statutes. ï¿½No one here is giving
much weight to the fact that a couple of amateurs were able to pluck this
entire conversation out of midair without some level of sophistication,ï¿½
an FBI source said. He declined to elaborate, emphasizing that the
investigation was ï¿½only in the preliminary stages.ï¿½

Attempts to reach the Martins for comment were unsuccessful.

Thereï¿½s little chance a ï¿½scanner buff or rank amateur could zero in on
[this call] and get the quality and clarity of transmission that was on
that tape,ï¿½ said Bill Cheek, a San Diego, Calif.-based professional
ï¿½radioist.ï¿½ Cheek, an Internet celebrity among those who traffic on
newsgroups dedicated to scanning, publishes the ï¿½World Scanner Reportï¿½
newsletter and has written three books on scanning, including the
ï¿½Ultimate Scanner.ï¿½ Cheek said the Martins would ï¿½really have to be a
super expertï¿½ to have pulled off the interception. And even an expert
would have had to have some help, Cheek notes, ï¿½like someone tipping an
expert off to the fact that a cell phone conversation was happening then
itï¿½s bingo, 1-2-3-4, it wouldnï¿½t take much to zero in on the call.ï¿½ But
for this to ï¿½happen by chanceï¿½ would ï¿½be a rare situation."

Though all new scanners sold since 1993 are prohibited by law from having the capability to pick up cellular phone frequencies, some low-quality scanners do pick up what is called the ï¿½imageï¿½ of a cellular call, says Ted Rappaport, electrical engineering professor at Virginia Tech. An ï¿½imageï¿½ occurs in a radio receiver when the receiving equipment must modify the high frequencies of a cell-phone call so that they can be heard by the human ear. If a scanner is close to a cellular phone base station, it increases the likelihood of stumbling onto a cellular callï¿½s ï¿½image,ï¿½ Rappaport says.

Taping an entire cellular phone call on the basis of picking up the callï¿½s image is ï¿½absolutely not a trivial thing,ï¿½ Rappaport says. ï¿½The likelihood of picking up something from a cellular phone imageï¿½ using one of todayï¿½s commercial scanners ï¿½is plausible, but highly improbable,ï¿½ he said, not unlike ï¿½ trying to find a needle in a haystackï¿½ and to be successful, ï¿½you have to know where the needle is or have a good idea of the location of the target.ï¿½

And Rappaport should know ï¿½ he developed the capability to find that cellular ï¿½needleï¿½ with a device called Cellscope. The device allows law enforcement agents to target a specific cellular phone call even on the move. It was Rappaportï¿½s device that allowed the FBI to finally track down the infamous computer hacker Kevin Mitnik in 1995.

Professional surveillance and security experts know how difficult the task is that the Martins pulled off. The clarity and duration of the interception, as indicated by the published transcript, ï¿½indicates that a surveillance specialist monitored and taped [Gingrichï¿½s] phone call,ï¿½ said James Ross, president of Ross Engineering, during a radio interview on the G. Gordon Liddy show. Rossï¿½ company (www.rosseng.com) is a Washington, D.C.-based firm that specializes in countersurveillance and privacy protection.

Ross, who previously worked in various security positions for the U.S. government, said the taping could have only been done with equipment such as Rappaportï¿½s Cellscope device, ï¿½which are only available, legally, to licensed telephone companies and law enforcementï¿½ organizations. And even then, such devices have to be monitored and operated by ï¿½highly skilledï¿½ people, Ross said during the radio program.

Members of Congress, habitual users of cell phones, have been jolted by the Gingrich story. Informal conversations over the past few days with Hill staffers reveal that several members are considering dumping their

analog cell phones for the newer digital models. Digital cell phone calls
are much more difficult to intercept due to the nature of the digital transmission, which when scanned, sound like static.

Additionally, Rep. Billy Tauzin, R-La., new chairman of the House Telecommunications Subcommittee, said he would call for hearings on the issue of cellular phone security. Those hearings would be aimed at the privacy issues surrounding cellular phones and exploring the possibility of a technological fix.

How does a "trunked scanner" know which conversation you want to continue to monitor out of the many that are being transmitted at the same time? It would seem to me that some sort of interactive process would be needed. The only way I can do it with my Pro-43 is to lock out the control channel and keep hitting the scan button until the familiar voices are back.

>
>AN

There are three main types of 900 MHz cordless modulation techiques:
1) Spread spectrum digital- forget trying to monitor this, it's spread out across the spectrum and is digitally encoded.

2) Digital modulation, also next to impossible to monitor because of the zillions of encoding possibilities.

3) Analog modulation, you can hear these phones. Search between 902 and 928 MHz. Most analog phones will look for a clear channel, and they have between 10 and a few hundred channels, depending on the model- so it's necessary to search the entire band. I've found some activity in my area between 902 and 910 MHz, so there are some out there, it's just a matter of hitting one while it's on. Be persistant!

Hope this helps, happy scanning!

I looked for scanners in Dubai and Fujairah on several different occasions, and found none, I don't think they are legal per se. I found lots of shortwave receivers however, and at very competitive prices!

You shouldn't need to modify that model.

I have one, and when set to the 800 mhz freqs, I seem to get all kinds
of cell traffic.

Even to the extent that if I don't turn it off when using my cell
phone, it picks up the call I am making, every time.

We are talking about the same scanner, right?

Red alert light in the upper left to warn of highwat patrol by keying
in on the mobile extender?

Set the band to 800 frreqs, and give it a shot. keep the squelch open
as most phones these days only transmit at .6 watts.

Good luck.

>trunked systems boring to monitor.

If you live in an area where the trunking is relatively analog and
"simple", you're right. It's not too bad to continue monitoring the
way you might normally have, minus the ability to focus in on one
agency. But that's becoming a rarer and rarer example of how an
agency goes trunked. The system being implemented here in
Hillsborough is the GE Ericsson system, and what are either
scanner-blocking "buzz saw" noises, or sounds of encryption, make
passively monitoring the system very difficult.

The nice thing about the TrunkTracker is that even if police insist on
going digital, we will now be able to at least monitor medical and
fire operations which are unlikely to invest in the encryption scheme
of things, so it WILL even the odds a bit.

Not at this time. The FBI is investigating, and although IANAL, I believe there is a three year statute of limitations before charges need to be filed. No big hurry.

As far as violating Florida laws... there is an article in todays paper that states that Florida will not press charges UNTIL such a time that one of the participants of the call asks that charges are filed. It appears that Florida does not want to press charges until they are assured that there is someone party to the conversation who will testify that the conversation did indeed take place and that it was private. Sure, it is almost obvious that what they did was illegal, but without someone party to the case willing to testify, there is no case.

heres the juice.....ok alot of cloners have been trying to "beat" the RF fingerprinting system and heres how i hear its done"dont clone myself" they use ESN readers and watch or certain ESN prefixes i.e. c3 for mots then they check the SCM and see what it is handheld bag etc etc they then match pairs to the phones that they want to clone...put a mot flip's pair into a mot flip works about 75% of the time......

has anyone else heard about this?

It's easy to get power and voltage mixed up when speaking
about decibels.

For power: 3 dB loss reduces power by 1/2 and
For voltage: 6 dB loss reduces voltage by 1/2

When speaking of voltages, dB = 20 log (v1/v2)

When speaking of power, dB = 10 log (p1/p2)

You can derive one from the other if you use the relation
between voltage and power:

p = (v * v)/Z

Power being the square of the voltage divided by the impedance.

> trunked systems boring to monitor.

I used to think that until I recently was trying to hear about road conditions on a GE trunked system. I tried to follow the conversation of a highway-maintenance group, but the group swapped channels with fire and police after each transmission terminated. Furthermore, while the group had changed to a different channel, my scanner remained locked onto the "We Bring Good Things to Life" jingle after the each transmission.

I wonder... Will the Uniden scanner switch back to the control channel before that silly jingle begins to play on GE systems? How slow will the scanning rate be if the scanner has to monitor any programmed control channels as it makes each lap?

I was under the understanding they can do conventional, just like a normal scanner? The review I read said coverage was like a normal scanner, 29-54, 116 - 174, 440-512.... If it will accept 118.600 (ATC), why wouldn't it accept 863.1275? They are sold less than the 9000 because the 9000 isn't that hot of a scanner. I plugged my 9000 into the same antenna as my RELM HS-200, and recieved about 4 times better on the HS-200. Same freq, same antenna... I did a lowband (46.44, SRVFire), San Francisco (488.7625), and a few business 800 freq'.s.

While trying to modify my Radio Shack PRO-46 by clipping the wire, I think I may have messed up the radio. I'm not sure exactly what the problem is, but here are a few of the things its doing which is odd to me.

When I press WX is keeps scanning 162.4-162.5.

For awhile I wasn't able to recieve anything (I had a working scanner next to me to verify someone was transmiting on the frequency).

Once in awhile it recieves in the 30 MHz range as well as 450 MHz. When it is recieving something, the WX is still messed up.

I'm not sure what I may have done, but if anyone has any ideas or suggestions, I would greatly appericate it. Please reply via E-Mail if possible.

Here in Massachusetts are State Police are now on a Smart Net type2
trunked system that is virtually imposible to stand listening on a conv.
800 Mhz scanner. There are so many other state agencys using the system
as well as alarm tones that you go out of your mind. The minute this
scanner is availible they will sell thousands in this state alone to
people who couldn't care less about PL, DPL or conventional freqs. we
all have many other scanners to cover all of them... just give us one

for all are trunked systems and we have it all coverd...

I wasn't. I was LMAO that Harold would post a blatant ad for Pop Comm
letting us know we can read old news in a month and a half.

> Harold Ort has been
> in the radio biz a long time and is a highly respected journalist.

That is nice but I don't consider him better than anyone else on here. I =
have=20
seen other respected journalists on here that don't use it to sell their =
rag.
In fact they actually dispense information that shows up in the mags =
months later.
No, I didn't expect Harold to publish his article on here but to just =
post an ad
and nothing else. Sleazy IMHO.

> I
> wouldn't expect him to go into detail here for the few people who =
don't
> get Pop Comm.

Well, you brought it up. I doubt if the amount of people on here that =
don't
get Pop Comm would fall in the realm of few. Many experienced monitors
chuckle at the mention of Pop Comm. =20

> I was excited to hear of this development and I eagerly await the =
magazines arrival.

Do you really feel it will contain more information on the Uniden =
Trunked scanners than=20
what will have passed through this newsgroup in the next month and =
half? I doubt it.

Yea, get a CE-232 from Commtronics. Works like a charm on the 2004.

Hi,
Name is Gary, I have an older bearcat 210xw 20 channel base.
It will work but has to warm up for 15-20 minutes before anything will
come over it. Also the display does not show up for about 5 minutes.
I was wondering if anyone might know what parts I could replace to fix
problem or is this radio destined for the garbage can? when somthing
does come over it, seams wavy sounding also.
I would appreciate any help!
Gary

Message-ID: <jkauluku-1901971937470001@news.hawaii.edu>
Source record: 210972

I've got a whole bunch of out-of-date aviation charts (low and high altitude, approach charts, etc) taking up space in my room. Although not current for navigation, they have lots of aircraft-related communications frequencies (like approach, tower, and center) and also ground navigation frequencies. If anyone wants all of them (or just for the airport near your house, maybe) let me know and you can have them for the price of a stamp or two.

e-mail me at jkauluku@hawaii.edu

This is called Federal preemption and in this instance the FCC is the licensing authority. Any rights and priveliges under an FCC granted license are *presumably* not subject to change or further regulation by the whim of a lesser authority. A licensed Ham with a mobile or handheld transceiver shouldn't run into a problem but a scanning receiver could be in a gray area of the law. The FCC might choose not to excercise their preemptive authority.

Message-ID: <01bc0677$c26c8ce0$57682299@systech>
Source record: 210976

I am looking for an indoor antenna. I live in an apartment at present, and have been using a telescoping antenna on my Uniden 9000. It does a good job for the local police, air, and marine, and with the HAM bands - but gets fuzzy on other bands.

The Sky Scan is advertised on page 11 of the January 1997 Monitoring Times for $ 99.95 - complete.

Does anyone have any experience with the antenna, or the company distributing it? Or, are there similar ones I should look at.

Any help is appreciated, Steve Colegrove

I just read Cheek 3, The Ultimate Scanner and the CE-232 interface only
does 2 way comms with the
PRO 2004/5/6 series. THe 2035/2042 series is one way only, to the
scanner. You can upload freqs to the scanner but not download back to
the computer. However, with the 2004/5/6 series you can upload and
download plus all the other logging features.

Dan:

All the early cordless phones used this split. I have an old (& still working) Murata brand phone that uses the same split. Certainly keeps the casual scanner op's from getting much of the conversation, but the handset is much more likely to pick up power line garbage and the range isn't anything to write home about.

No direct cell mods available for this unit. You can hear cell images
from 894-916 Mhz.

The unit lends itself well to virtual downconverter technology, but it's
difficult to describe the modification in text. Check out the images as
noted above!

Maybe I'm being a bit simplistic here, but can't most scanners receive
cellular by tuning to the image of the cellular frequencies?

M>scanner is very prone it cellular imaging and intermods. IMHO, if you
M>are going to buy a new scanner, buy the Uniden bc9000.

I couldn't find a Pro-2036 listed in the current RS catalog, but the
2045 looks suspiciously like a Uniden scanner. It is also the only RS
scanner with CTCSS included, so that makes it more likely that it is a
Uniden. It's also likely that some of the lower end scanners are Unidens
in disguise, but I am not sure.

> Is there a better place to buy than Grove (catmac.grove.net)?

You might try Ace Communications at: http://members.gnn.com/IDAINC/bc2.htm

I've had good luck with them and recommend them when I can.
I am not affiliated with them in any way, just a satisfied customer.

>
> How much are batteries for these scanners?

Ace has a price list for anything you need.

RE: All the talk of Newt and his cell phone conversation intercept.
Would the crime of a cell phone intercept be upheld by the Supreme Court,
if it ever got that far in the court system, or would the courts finally
decide that the law was so poorly written, that there is no way such a
case could be properly heard and upheld. If I recall the law (and I
haven't read it that close), it was illegal to listen to a cell phone call
on your own cell phone, but OK on those old UHF TV's that pick-up Channel
70-83, and on your dental gold fillings. <Grin>

Hi,

The OS456 walks the walk and talks the talk. I use a 2005+os456+PROBE2.0 in windows 95
with the SB32. By using the equalizer in the SB32 I get better audion and can record sound directly to the hard disk. I hav reached 865 ch/s on my P120 but it wont stop on any channel. 45-55 is the best speed.

I would endorse this combo any day.

Andrew,
I would strongly recommend the MAXON 210+3. I'm dissapointed in the
PRS-101s I have as they are simplex only and suffer from IMD terribly.
Just after I purchased two PRS-101s because there were no GMRS
repeaters in my area, a local ham club is considering putting up a
Vertex GMRS repeater. Now, I plan on purchasing a Maxon SM-2000 mobile
unit and two 210+3 HTs. Anyone want a couple of barely used PRS-101s
for a good price?

Anyone can target a specific phone number and listen to only that cell phone, it ain't hard. (monitor the cellular data stream!). and for that matter you can also follow a person through cells and channel changes (aka freq changes).
On the other side the probability that these fools (the Martins) had this equipment is highly improbibly, most people don't even know it exists non-the-less where to get it, but (a big one) coincidences do happen and if they were to find this call and just HAPPEN to have a tape recorder ready and the cellular carrier temporarily forgot to shuffle the phones (change the channels on the phones to make more efficent use of the availabe channels) for about 20 min. and they were stupid enough to have taped the call and give it to their local Democratic congressman (generic term if ya don't like it sorry, congressperson) who just happened to offer imunity for all illegal actions commited (They can't do that just like the cops can't actually drop the charges although they often so nicely offer) and then she (congeressman) gave this to her buddy on the ethics committee and then he leaks it to the NY times.
Alot of and's huh? Not impossible but highly improbile.

just a thought while the debate rages on.

A handheld frequency counter displays a frequency of a transmitter close to the counter. Rat Shack has one for about $100 and a scanner freq should have one. It is well worth the money.

Ken Klimasewski <n1kk@idt.net> wrote:

>Anyone using a ICOM R71A receiver as a tunable SCA decoder?

I did years ago, when I still owned an R71A. Attached
is some of the info posted on Usenet back in the 1980s, before ECPA.
Excuse the formating:

1. LISTENING_TO_SUBCARRIER_TRANSMISSIONS

1.1 Introduction

Bob Parnass, AJ9S

SCA, which stands for Subsidiary Communications Authoriza-
tion, is a method by which another channel of information
can be sent "piggyback" to the signal of a conventional FM
broadcast station. This information, transmitted on a sub-
carrier of the main channel, is ignored by the ordinary FM
receiver unless equipped with a special adapter. An article
in Monitoring_Times claimed that connecting a vlf receiver
to an FM broadcast receiver would permit SCA detection.

Compelled to try this suggestion, I found a way to confuse
my ICOM R71A into tuning below 100 kHz1, and after receiving
substantial inspiration from Will Martin, Phil Karn, and
others I now can report success!

With the R71A in the FM mode, tuned to 67 kHz, I connected
the ICOM's vlf antenna input through a 0.005 ufd capacitor2
to the earphone jack of a $16 General Electric AM/FM port-
able radio, and can now listen in on the world of SCA!

In the first few minutes of tuning around, I've heard the
Physicians' Network, Muzak, farm commodity reports, and
several data transmissions.

I built a simple SCA interface, consisting of a capacitor
and resistor, into a plastic film canister. The resistor
provides a load, preventing damage to the AM/FM radio's
audio output stage, which normally expects to deliver its
power into an earphone or extension speaker.

----

1. Parnass, Bob, "Trick the ICOM R71A below 100 kHz", in Monitoring_Times,_April_1985.

2. The capacitor is needed with the GE radio I used to block DC. It also forms part of a high pass filter.

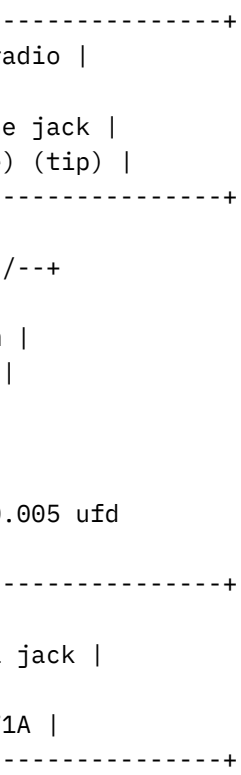

Figure 1. Connection of R71A to AM/FM Radio for Subcarrier Detection

Most activity is heard with AM/FM radio tuned to the FM broadcast band, and the R71A set to 67 kHz FM. Aside from the Muzak, commodity reporting, and the Physicians' Network, I also heard an announcer reading from Popular_Communications on CRIS, the Chicago Radioland Information Service. This service carries programming of interest to the handicapped. I heard WXRT transmit different programming on both 67 and 92 kHz FM subcarriers.

A listing of FM stations carrying SCA signals may be found in Bruce Elving's FM Atlas and Station Directory.3

---

3. Elving, Bruce, FM Atlas and Station Directory. Ninth edition. FM Atlas Publishing Company, Adolph, Minnesota 55701.

If a television set is substituted for the AM/FM radio, and the R71A set to 60 kHz FM, one may be able to detect the audio from a local scrambled TV channel. It worked for me.

- 4 -

1.2 Tricking_the_ICOM_R71A_to_Tune_Below_100_KHZ

Bob Parnass, AJ9S

The ICOM R71A general coverage receiver is designed for VLF reception down to about 97 kHz.

The following steps will confuse the microprocessor-based controller sufficiently to permit reception down to 0.0 kHz:

1. If all 32 memory channels contain frequencies, use the FUNC and CLEAR buttons to clear a memory channel.

2. Place VFO/M switch into the M (Memory) position.

3. Using all the manual dexterity you can muster, rock the MAIN TUNING knob back and forth, while simultaneously rocking the MEMORY-CH rotary control to switch back and forth between a memory channel with a frequency in it and a clear memory channel.

Continue rocking both the controls until a frequency of 0.000.0 appears on the digital display.

4. Depress the WRITE button. This stores the 0.000 MHz frequency in a memory channel.

You can now rotate the MAIN TUNING knob clockwise to tune up from 0.000 MHz to the frequency you want. Be careful: if you rotate the MAIN TUNING knob counterclockwise, the radio will immediately revert to 29.999 MHz.

To tune below 100 kHz in the future, just recall the 0.000 MHz frequency from the memory channel and use the tuning knob to tune upward. That way, you don't have to use two hands every time you tune to a VLF frequency.

I used a Wavetek 180 sweep/function generator to verify that the R71A is indeed receptive to signals below 100 kHz.

1.3 Notes_on_Data_Transmissions_Using_SCA

David I. Emery

Bob:

As for postman's holidays I'm typing this on a CRDS UNIVERSE 6835 68000 computer system here in my living room at home. It is linked by 212A modem to my lab computer at work which

is in turn tied by ethernet (ISO protocols) to 11 other computers at work including frog. The 6835 is available for various forms of hacking including decoding SCA traffic and RTTY, so I do not lack for sophisticated and powerful hardware and OS support at home (the machine I have here has 12 serial ports with full modem control on 8, all implemented with Zilog Z8530 SCC chips). As one of the designers of this hardware (I designed the VME version, and am architect of our multiprocessing 68020 processors) I am lucky to get first call on lab prototype systems as they become surplus.

I am not surprised that your poor R-71A developed spurs with volts of audio on it's input. I am sure that you are aware that the usual means of connecting a SCA adapter to a FM receiver is through a small capacitor tied directly to the discriminator output pin before the deemphasis network (more or less the same place the stereo chip connects).

By the way, FM stations also use 91 khz subcarriers (the FCC currently allows anything between about 60 and 100 khz, I forget the exact limits), so a tunable means of looking at subcarriers with some selectivity so it can handle multiple subcarriers on the same main carrier is very desirable.

As I mention in my posting, main carrier audio bleed into the detected SCA audio is inevitable when using an FM tuner or receiver that does not have filters optimized for very flat group delay over their bandpass. I am told that the professional SCA tuners built for Muzak and other audio services use special ceramic IF filters that have almost an order of magnitude flatter group delay characteristic than the cheap Japanese filters that almost all (even high end) FM tuners seem to use. I hope someday to acquire some of these filters for my tuner. (They might help with satellite MCPC demodulation).

I suppose that someone who is good at designing filters could design a compensating network given measured characteristics of an IF system, but for demodulating data it isn't really necessary to suppress main channel audio that many db. (I, for one, cannot stand Muzak so being able to listen to it completely free of main channel bleed is not a priority). I have heard that many Muzak services use compressor/expandor systems a la Dolby or DBX which have the effect of suppressing perceived main audio bleed much further. (If you intend to actually listen to SCA programming you might try to find out if it is companded and if so re-expand it's dynamic range at your end - it will probably sound much better)

What follows is the text of my original posting :

Some Comments on SCA Monitoring

First, I have had good luck with a SCA adapter made by a company called Communications Poly Services, Box 3251, Westford Mass, 01886. Their model is a SCA-3.

Unless the tuner any SCA adapter is used with has very good IF filters with nearly constant group delay across their bandpass, the main carrier modulation will cause phase modulation of the subcarrier to some degree. (This is in fact the principle behind many group delay measuring systems). This causes some unavoidable bleed of main channel audio into the SCA audio. The only cure for the problem is better IF filters (or better alignment of the ones you have)

Signals Observed in the Boston Area

- More or less standard Audio

1. Muzak (some 10-15 channels of supermarket, store, and restaurant music, some almost listenable, some obnoxious) At least two stations carry the same exact feed (I think of MUZAK) in very close time synchronism, I suspect that they get it from a satellite feed.

2. Readings for the blind of daily newspapers and magazines.

3. Audio of sister AM stations (a technique used to piggyback audio over a studio transmitter link).

4. Physician's Radio Network (Will Martin's comments apply, I can't even interest my medical student wife).

- 7 -

5. NBC radio network feed (seen some years ago) right off the wire cue beeps and all.

6. Educational programming from local community colleges.

7. Audio of carrier current college AM station being distributed to power lines in dorms (seen some years ago) on sister FM station.

- Non Audio signals

1. Transmitter remote control and monitoring (in use for many years) Older systems transmit continuous 1-3 khz tone as FM on 67 khz subcarrier, tone's exact frequency represents meter reading. Newer systems transmit sequences of ASCII characters using start stop transmission on an FSK'd tone FM

modulated on a 67 or 91 khz subcarrier (103 modem tones are sometimes used I believe since the chips are so widely available). What one sees on the FM transmitter output is usually telemetry reporting transmitter parameters (plate current, VSWR etc) back to the studio, by using the FM signal to do this the station can avoid having to pay for a telephone line. The command link to the transmitter is completed through a subcarrier on the studio transmitter link (which usually gets filtered out before the signal is fed to the transmitter)

2. Dow Jones Pocket Quote stock quotes. This signal is 4800 baud asynchronous (start stop) transmission direct keyed (FSK) onto a 67 khz subcarrier with a shift of about 10 khz from mark to space. Mark is low and space high in frequency, the signal uses 8 information bits and a parity bit, and a stop bit. The quote data is in a binary format that can be deciphered with a little effort, a variant of standard ticker symbols are used with prices in packed binary. I understand this service is or was offered in more than 100 cities. I am not sure whether the prices are delayed 15 minutes as is the standard for broadcast tickers or are live.

3. A direct 67 khz FSK keyed 9600 baud data stream carried by a local university radio station, that I am told contains a dial up bulletin board. Students can call the radio station and post notices which get broadcast every so often on the 9600 baud feed.

4. Paging services. I have been told that there are at least a couple of SCA subcarriers used for paging. I do not know what exact format the paging is in (whether it's start stop transmission of characters (using a UART or equivalent) or long strings of bits (using dedicated LSI)).

5. Remote control of electric utility loads. The local power companies are experimenting with controlling their off-peak loads (such as cheap-rate water heaters) with SCA subcarriers. Currently two stations carry the 1070/1270 hz FSK 300 baud control commands as audio tones on a 67 khz subcarrier.

- So far unidentified (I'm lazy)

1. FSK audio signal (known to be such from spectrum plot) carried as fm modulation on 67 khz subcarrier. Apparently frequency shifted from about 3khz to about 5.5 khz this carries 1 to 5 second bursts of what seems to be 1200 baud keying. I don't know what format the data is in or what information is carried.

Other SCA Signals

There are other signals which I have heard or read are transmitted on SCA (but haven't actually seen or yet demodulated).

1. Commodity news service (CNS) frequency division multiplexed multi-channel low speed baudot commodity wires. This signal, which is in a format similar to that used to transmit low speed newswires to radio stations and newspapers for many years (since the mid 60's) consists of about 24 subcarriers at 120 hz intervals starting at a c.f. of 420 hz. Each subcarrier is FSK'd with a frequency shift of 60 hz from mark to space. Most of the CNS wires (there are different ones for different products) are transmitted at 56.88 baud in 5 unit baudot code. There are both 45.45 baud baudot and 74.2 baud baudot circuits on the CNS mux however.

2. Commodity pocket quote system. This is a similar system to the stock pocket quote. A calculator size device picks up a SCA subcarrier and displays selected quotes on a LCD display. I do not know if the format is similar to the stock quote system (4800 baud direct FSK of a SCA subcarrier).

3. Dow Jones news stories. Some years back I saw ads for a Dow Jones service that would supply your home computer with late breaking financial news in various categories (you could select). I was never able to actually see the SCA transmission for this service in the Boston area, but from the text of the ad it was fairly obvious that they were using SCA. More recently this kind of service has been supplied on a dial up basis by Dow Jones, and by Rueters through a spread spectrum transmission on a satellite that allows use of 2-3 foot dishes.

4. UPI and other wire services. A recent story about UPI's data communications said that they were having trouble with their satellite (they also use spread spectrum) distribution system in certain large cities where there are many 3.7-4.2 ghz terrestrial systems in use, and that they were going to use SCA to distribute wire services. I do not know what format they are

using (could be similar to CNS) and would greatly appreciate hearing from anyone who knows of any actual wire service SCA transmission anywhere (I'm writing a USENET story on picking up wire services). [I know of a local FM station which has been thinking about using a 91 khz subcarrier to relay their AP service from their transmitter and studio site to a remote news studio to save money on telephone lines.]

5. Nationwide paging. There has been much talk of setting up a nationwide paging system that would use SCA subcarriers fed from a satellite downlink to simultaniously page people over very wide areas. Paging receivers would look through their local FM spectrum to find the station carrying the paging. At one time PBS was going to rescue themselves from Reagan's financial oblivion by selling this service through all the National Public Radio outlets. I believe I have read that while this fell through, that someone else has tried to set this network up.

6. Software distribution. There has been talk on and off about broadcasting home computer software over SCA subcarriers. I have read about experiments involving transmission of programs on telephone request (you call up and ask for a copy of Zorc or whatever and they send it - possibly encrypted - over the subcarrier.) I think the idea is that it is a lot more efficient to send a program at 4800 or even 9600 baud through cheap SCA hardware than 300 baud over phone lines.

7. Electronic mail. It has also been suggested (and supposedly tested) that SCA subcarriers could be used as a distribution medium for electronic mail. I would hope that encryption would be used .

Some Audio services heard of but not heard ...

1. Traffic reports broadcast to commuters in their cars.

2. Commodity prices for farmers.

3. Financial news and commentary.

4. A dentist's office background music and information service

And if you thought this was enough, has anybody looked at the subcarriers on the sound carriers of their local TV stations? TV stations are allowed, just as FM stations can, to transmit various narrowcast services on subcarriers on their sound carriers. Much of the available spectrum will go to

the new stereo sound signal and the secondary audio (bil-
ingual signal), but there is space reserved for other uses.

The principle use for TV subcarriers I have observed is cue
channel audio for Electronic News Gathering (ENG) teams. The
director in the studio can talk to the "talent" over this
link since most of the microwave systems used to relay the
video are one way only and there is therefore no backchannel
(except VHF/UHF radio). Many of these ENG subcarriers are at
40 khz or 55-60 khz (pre stereo).

Another use of TV station subcarriers is transmitter
telemetry. For years some of the Boston area stations
transmitted a 40 khz FM subcarrier carrying a FSK modem sig-
nal modulated by a repeating pattern of bits (similar to
satellite PCM telemetry formats).

You are more than welcome to pass this stuff to others
interested in data transmissions (I hope someone out there
trys the TV sound carriers too... tapping the discriminator
on the audio chip in a VCR might be good way to connect -
TV's have all that horizontal sweep energy floating around
waiting to get coupled into your receiver)

Dave

1.4 More_Notes_on_Data_Transmissions_Using_SCA

David I. Emery

Bob:

Thanks for the compliment, I have also enjoyed reading your
frequent postings to net.ham-radio. I sometimes wonder how
you get time to do anything else as you always have a new
tidbit on something almost every day!

I'd be curious to know whether you have tried to demodulate
and interpret the SCA data signals you have mentioned
receiving in the Chicago area. I have played with decoding
stock market quotes and utility load shedding commands (and
the MIT b.board) on and off by using IC phase locked loops
and/or a very ancient telemetry discriminator I acquired on
the surplus market coupled to a high quality Pioneer fm
tuner I bought for the purpose at a good price from a
discounter.

Some of the data you receive will be modem tones FM modulat-
ing an SCA subcarrier, recovering these is best accomplished
by connecting an appropriate modem to the audio output of
your receiver in FM mode. So far I have seen a couple of
stations using 103 (the standard FSK 0-300 baud kind) tones

- I suspect that many ordinary modems would probably work for those. I have also seen a higher speed FSK modem used that seems to shift from about 3 - 5 khz (there is no standard *modem* that does this, but some microcomputer cassette interfaces use these sorts of frequencies). I have been told that in some cities FM stations transmit FDM multiplexed low speed baudot (or ASCII) tty signals (Commodity News Service). Receiving these requires some sort of tunable FSK converter capable of picking out the desired FSK tone and rejecting it's neighbors 120 hz away on either side. The best units for this purpose are Frederick Electronics 1202RB's which have been showing up on the surplus market occasionally.

A large percentage of the data is transmitted by directly keying the SCA subcarrier (FSK). This method is almost universally employed for the higher speed data transmissions (up to 9600 baud). Recovering this requires some sort of FSK demodulator. This can be accomplished by using a phase lock loop chip, or by directly tapping into the discriminator of an FM receiver tuned to the SCA subcarrier.

I suspect if you dare dig into your R-71A you could probably bring out the DC coupled output of the FM discriminator and feed it into a small op-amp circuit that would square up the FSK data (with a Schmitt trigger) and convert it to more or less RS-232 levels so you could feed it into a serial port on some available computer. Such a circuit would be pretty simple to design and build, the only hassle might be coming up with a negative voltage for the RS-232 (I don't know what voltages kick around in a R-71A, as I have yet to scrape together the necessary funds to buy one with all the options I want). You would want to connect to the discriminator before the deemphasis network for best results with higher speed data (much of it is either 4800 baud or 9600).

I would be very interested to hear if you are able to find any wire service (AP, UPI or Reuters) transmissions on SCA. UPI has been saying it was considering using SCA to distribute news to it's clients and I am quite curious as to what format they have chosen.

Most of the actual data is in some variety or another of ASCII asynchronous mode transmission with start and stop bits, so a standard serial port set to the correct baud rate can be made to read it easily. It does take some programming however to convert what you read to sense (and 9600 baud is a little fast for some machines).

On another topic AM stereo works by phase (or modified phase) modulating the carrier with the stereo difference information while it is AM modulated with the sum informa-

tion. There is no subcarrier and certainly not a subcarrier 60 khz away (as you know at the present time AM radio channels are 10 khz wide (soon to be 9 khz) and there is no way you could stuff a 60 khz subcarrier in that). Some AM stereo systems use a 20 hz pilot to tell the receiver it's stereo but as far as I know none transmit the stereo information itself on any form of subcarrier, they all use some sort of quadrature modulation.

All of this is apropos of saying that I don't know why you found stations claiming to be AM stereo radiating significant energy at 60 khz from their carrier frequencies (or why your radio acted like you were).

It could be, but that's a big no-no. 123.1 is for SAR, and the
FAA and FCC (CAP is regulated by NTIA, not FCC, but must obey FCC
rules on FCC-controlled bands, including the aero band we're
talking about here) don't let SARCAPs (practice SAR) missions
use this frequency - there are others for practice missions.
123.1 is for use by *actual* search and rescue mission personnel
only, at least in theory. From the terminology used, like a
frequency designated "gold," I doubt that this was CAP; I've
never run across any CAP wing using colors for frequency designators.
Since the military has its own aero band and SAR frequencies, it
probably wasn't them. Without knowing where you heard this, I don't
know if it could have come from one of the states with a state agency
as the primary air SAR agency. My guess is that this was a non-CAP
civilian SAR organization, possibly a state Department of Transportation
SAR mission. Exactly what they were doing...search me.

Only if you're using a ham radio; scanners aren't covered under the FCC's preemption, since they're not really part of a ham radio station. The moral of this story is, if you want to listen legally...

1) get a ham license

2) buy a good dual-band 144/440 ham transciever with 800 MHz receive and lots of channels

3) in your car, use the ham radio as a scanner.

Best solution: 1) get a ham license 2) buy a good dual-band ham transciever with 800 MHz receive and lots of channels. 3) use the ham radio in your car as a scanner. No permission required anywhere in the USA - Federal preemption. Is this "as good as" a scanner - IMO no, and it's certainly way more expensive, but it *IS* legal (no flames to the contrary, please - it's part of a Federally licensed, Part 97 radio station - no state or locality can outlaw this.)

The way I understand the internals of a device like a Scout
to work, they can't make the software "ignore the FM band"
because it isn't really the software that's doing the work;
the Scout's internals are basically the same as a frequency
counter, plus software to handle the memories, etc. When
it receives a signal, analog circuitry tries to rectify it
to a square wave, which is then fed into a counter and used
to drive a display. If the strongest signal is in the FM
band, the only thing it can do is report the signal, or
maybe make a little light come on that says "sorry- FM
broadcast band detected" which wouldn't really help. The
situation with narrow-band recievers like scanners is
completely different, since they are tuned by software-
driven front ends, and the software can be programmed to
not let you tune it to certain frequencies. I hope my
explanation helped (I hope it was correct, too, but I'm
pretty sure it was.)

The law can NOT be upheld for the simple reason that it CONFLICTS with other law that has higher priority.

Since owning a receiver that can pick up these broadcasts is LEGAL, and POSSIBLE, and the FORESEABLE CONSEQUENCE of these facts, then one must assume cellular calls WILL BE monitored. Which, on the face of it, MIGHT allow for a law making DOING SO illegal.

BUT....from time to time, even infrequent, casual, monitoring will reveal ILLEGAL ACTIVITY......and when there is enough information contained in the overheard conversation to identify things like the identity of the perpetrator, the intended victim, etc, it may well be illegal to do NOTHING with the information.

Imagine hearing plotters about to bomb a crowded building.....

"Did you call in the warning?" "I called, but they put me on hold" "Did you call back?" "The line was busy" "Oh shit, there goes a few dozen bystanders" "what do we do now?" "nothing" "how much longer until it goes off?" "ten minutes"

Okay, what do YOU do?

If you do nothing, can you live with that afterward?

What a country!

If you want to get nutty, a company in Illinois called Metro West sells
a NMH battery packs for the BC3000/2500 (and also drop in chargers) I am
not sure of the price, but I do know that if your old pack is in good
condition they will give you some credit towards the purchase of the
long life battery pack. Their Phone number is 708-354-2125

Aloha y'all...

The subject line basically says it. I am looking for scanner
freqs for all islands of Hawai`i. I am on the island of O`ahu
and have enjoyed the scanning I have done so far. I am particularly
interested in business and 800-MHz police freqs, but am looking
for basically anything.

Thanks in advance...

Pat Mason, AH6Z
Mililani, Hawai`i

2275. FS:Icom R100(full 800Mhz) & Night Logger II w/Tape recorder & MFJ1278b

Newsgroup: rec.radio.scanner
Date: 1997-01-19 00:00:00 UTC
From: Paul Campana <pcampana@voicenet.com>
Message-ID: <32E29C2F.393C@voicenet.com>
Source record: 211059
Cross-posted to: rec.radio.scanner,rec.radio.swap

FS:

1. Icom R100 Communications Receiver. Full coverage from 100Khz to 1.8 Ghz. 100 channels w/preamp/ant. It came from Icom with the cell portion unblocked. It is in very good condition with only a slight nick on the top front plastic housing (A hand held tipped over and hit it). It has only been used as a base radio and includes a motorola ac adapter and an F-Nconnector for an Ext ant. I have the manual,box, and mobile bracket but not ALL of the packing. Asking $400+Shipping

2. Night Logger II automatic tape reorder activator. I will include a RS tape recorder with it(it has the tape window missing but work perfectly). Both have less then 10hr total operation on them.$60+Shipping

3. MFJ 1278B multimode controller. Packet,Ritty,etc. Unit works fine but the case is dented. I have one set of cables,books, and DOS software, NO ac adapter(12vdc). Make offer

Fell free to email me with any questions you might have.

You can probably find a new one. It's in the 1997 R.S. catalog. If it's been discontinued, you can probably still find a R.S. that has one (probably at a discount price). Last Friday I saw 2 at a local pawn shop, new in box at $225 ea. Look around a little.

Depending on where you live, you could be picking up
Non Directional Radio Beacons (NDBs) used for aviation
navigation. They broadcast between 190 and 535 kHz, and
it's usually a three letter identifier unless they broadcast
a voice message. (BRA is in Asheville,NC) The range on the
ones around me isonly 10-20 nautical miles by air, so only
a few miles on the ground. Loran is a sequence of pulses
centered about 100kHz. I'm not sure what bandwidth it covers,
though.

I'm ready to modify my FT-50R for the MARS/CAP mod but only because this opens up the UHF transmit to 480 MHz or so. I want this to operate under my Part 95 license (KAF8111) on 462.6/467.6 and 462.675/467.675. Besides no being type-accepted, does anyone know of any compelling reason NOT to perform the keypad solder jump 1 removal mod? Please post or email me if you feel I'm going to make a grave mistake in accomplishing this mod. Thank you in advance.

I had a local Rat Shack salesman (!) insist that Uniden has never made scanners for RS. Being the Grand Poobah of Electronic Enlightenment, he proclaimed with an all-knowing chuckle, "A lot of people believe that old story." Now, I know that some older ones were indeed Unidens in Rat's clothing, and that GRE makes several for the Shack.

Are any current RS models Uniden products?

Thanks....

Hi Dan,

Yes, all pre 1984 cordless phones used the 6 Meter band for the Handset
(49.830, 49.845, 49.860, 49.875 and 49.890) and the 160 Meter band for
the Base Unit (1.655, 1.690, 1.705, 1.730 and 1.755).

Prior to 1980, they used 27.995 Mhz for the Base unit and 49.860 Mhz
for the Handset.

The corless phones in the UK still use the 160 Meter band for the
base unit.

Corldess Phone frequenices for the UK

Channel Pairs Base Unit TX Mhz Handset Tx Mhz
1 1.642 47.45625

It's true!

First generation cordless phones used frequencies around 1.7 MHz
as the base frequency. They used FM modulation, and usually used
the power lines (or phone lines) as the transmitting "antenna".

I don't believe the 46MHz frequencies were released yet, and only
a few 49MHz "kiddie-talkie" freq's were available.

I still have my "first" cordless phone somewhere. It is a 1.7/49
model, and it was terrible! I think it is a Uniden
"Extend-a-phone". The handset is one piece, and does not have an
external 49MHz antenna. The base TX'es on 1.7MHz and uses the
power line as the TX antenna (to make things worse, the house I
was in at the time had portions of the power line in armored BX
cable!).

The handset 1.7MHz antenna is a regular AM radio type ferrite bar antenna, and the 49MHz receive antenna is a length of wire snaked along the back-side of the handset. By holding the handset, *you* were the antenna! Your hand capacitively coupled to the loop through the case.

Unfortunately, if you changed hands, handed the phone to someone else, or placed the handset down, the signal level dropped and the base hung-up!

The handset also suffered the same directional problem as a typical bar-antenna AM radio. You had to orient the handset "just-right" to get maximum signal and/or null-out power-line noise. Not a very good system!

Thank Gawd for 900MHz!!!

Cheers,
Paul Grohe

Hi Paul,

these were actually second generation cordless phones! The first generation cordless phones (pre 1980), used 26.995 Mhz (FM mode) for the Base Unit and 49.860 Mhz for the Handset. They were manufactured by a company call "Mura".

I came across one of these several years ago when I was still into CB radio and hung out and CB channel 3 (26.985 Mhz). I had a neighboor that had one of these and always picked up the bleedover when they used their cordless phone.

I had an old Realistic DX-302 that could pick some of these old style cordless phones from several blocks away. I remember one unit that Radio Shack sold back then, that was cordless handset, that had to be dialed from the Base Unit and had the range of about 50 feet. The base unit frequency on these so call 50 foot range cordless phones could be heard from over 2 miles away!

> Has anyone else seen this phone....just wondering!

Hi Dan,

The cordless phones prior to 1984 had their base unit frequencies
allocated to the 180 meter band (1.6 - 1.8 Mhz). The handsets
were allocated to 49.830 - 49.890 Mhz band. Most of these phones
only had a range of about 150 feet at best, but could be monitored
from several blocks away, with a decent general coverage SW receiver
and antenna.

Warren,

The Radio Shack Pro-2036 doorstop is the same scanner as the Uniden
bc 890xlt. I call it a doorstop because it is worthless it a metro
area that uses 856-857 Mhz for its Fire Department freqs. This
scanner is very prone it cellular imaging and intermods. IMHO, if you
are going to buy a new scanner, buy the Uniden bc9000.

You may be able to fix it by disassembling the scanner to get to the back of the keypad. Clean the printed cricuit board(only the traces for the keypad, not the radio) with alcohol pads. Also clean the back of the buttons. I say to use alcohol pads because they dont have water in them, while rubbing alcohol does.

2298. Martin - Gingrich tape

Newsgroup: rec.radio.scanner
Date: 1997-01-19 00:00:00 UTC
From: Dan Evans <dfe@earthlink.net>
Message-ID: <32E23650.640E@earthlink.net>
Source record: 211082

I was intrigued by this story about a couple that taped a cell phone conference call. Apparently, their local congressman in was in Florida talking with Newt Gingrich and other Republicans in Washington and they made a tape of the call and turned it over to the ethics committee.

Assuming that they were following this congressman in order to hear his cell phone conversations; how would they find out what frequency his phone was using?

Is it possible for someone to follow a cell phone user to monitor his calls? It seems to me that it would be nearly impossible to scan through all the frequencies before the conversation is over.

>George

I bought mine new about 5 years ago. It has continuous coverage from 500 kHz to 1300 MHz. I think some of the newer ones are cell blocked but I'm not sure. Performance is pretty good above 30 MHz but anything below that, such as shortwave broadcast or domestic AM band, doesn't do well with the supplied antenna. The audio on it could also be better, in my opinion. It's not an easy radio to listen to in noisy environments.

What attracted me to it was the fact that there are no breaks in coverage and you could scan any frequency in any mode (AM, FM narrow, FM wide - no SSB) - TV audio, domestic FM broadcast, air, military air, the dreaded cellular, public service; and with the right antenna, shortwave broadcast, AM broadcast... you name it, it covers it (as long as your dealing with AM or FM)

One bad thing about it is programming the thing is a pain in the ass. Everytime I add or change a frequency, I have to tinker with it to get it right. There is no logic to its programming steps. The simplicity and ease of programming of a Radio Shack scanner will not be found in this one.

As far as its value goes I couldn't even guess. I see them selling used sometimes for around $150 to $200.

Source record: 211087

I bought the RS Pro-2037 about a week ago. I like it! I was concerned about the baklite display, but it's really not a problem. Nice green background light with black numerals and letters. The touchpad is firm and easy to understand. Front peg legs make for nice tilt angle viewing. Although I'm using the stock antenna that came with the radio, and it works fine, I am planning on setting up an external one here soon. Overall I would recommend this radio to anyone who's looking for a good down to earth basic model with some well worth the sale price features.

Hamfest - Sunday February 16, 1997
Sponsored by - The Long Island Mobile Amateur Radio Club
Where - New York State Armory, 63 Babylon Turnpike, Freeport, New York
Time - 9:00 - 2:00 (doors open at 7:00 am for sellers)
Admission - $25.00 / 6 ft table (LIMARC Supplied): $ 6.00 General Admission All others

If you are interested in selling at the Hamfest, you MUST reserve you table(s) in advance. Please note tables will not be sold the day of the Hamfest. Currently we have sold approximately 60% of the 100 + tables, so please do hesitate to reserve your space now.

Make your check out to LIMARC and mail it to:

Hamfest
22 Springtime Lane East
Levittown, New York 11756-4419.

For any additional details on the Hamfest call the LIMARC information line at 516-520-9311 any time 24 hrs/day.

There will NOT be any amateur radio exams given at the Hamfest.

Directions:

1. Take the Northern State Parkway, Southern State Parkway or Hempstead Turnpike to the Meadow brook State Parkway South to Exit M 7 west, Babylon Turnpike. You will see the
New York State Armory on you left side as you exit onto Babylon Turnpike.

2. From Sunrise Highway you can pickup the Meadow brook Parkway Noth the exit M7 west, Babylon turnpike to the Armory just on your left side as your exit onto Babylon Turnpike
west.

3. If you are Coming from any of the following bridges: Throgs Neck, White stone or George Washington follow signs to Long Island Via the Grand Central Parkway to The Northern State and follow above instructions from paragraph 1.

If you are coming from the Verrizano Bridge, take the belt parkway, to Long Island to The Southern State parkway and following the above directions in paragraph 1.

Door Open at 7:00 am for sellers and 9:00 am for the general public.

To Check out our Stun Gun offer ..keep readingï¿½

What is a Stun Gun?

A Stun Gun is an electrical self-defense device that puts out a high voltage and low amperage shock. By merely touching a person with the stun gun, he is immobilized for several minutes with no permanent harm. Stun Guns are considered reasonable force to resist attack. They can be used many times to ward off attackers before the batteries need replacing.

Our Current Best Seller is the "Talon 250"ï¿½."The Finest Stun Gun in the World!"

Features:

Curved Head.
Strength: 250,000 Volts.
Power requirements: 2 X 9V Duracell Batteries (included).
Complete with hand-strap and belt clip.

Effects of the "Talon 250":

The Talon 250 Stun Gun does not merely rely on pain for results. The stun gun works on the muscular and neural system. A short blast of ï¿½ second duration will startle an attacker, cause minor muscle contractions and have a repelling effect. A sustained blast of 1 to 4 seconds can cause an attacker to fall to the ground and result in some mental confusion. It may make an assailant unwilling to continue an attack. A sustained blast of 5 seconds can overwhelm and control the attackers neuromuscular system IM-mobilizing him, causing disorientation and loss of balance. He will probably fall to the ground, feeling weak and dazed for some minutes afterward. Full recovery in this instance takes about 10-15 minutes. The "Talon 250" is effective through 1/2inch of clothing.

TALON 250 STUN GUN: ï¿½95 (Batteries included)

Dave,
The Pro-62 is a very nice radio. You should have lots of fun with
it. Go to Radio Shack and pick up a copy of Polic Call Plus. Lots of
good info on scanning and listings for frequencies in your area.
Good luck!

Strong signals,
Rich Wells

Don,
First off, what makes you think the frequencies you have are wrong?
Check out the number of mobile units listed for your frequencies. If
you live in a small town, there might not be a lot of chatter on your
frequencies.
You might also want to scan through the licenses in your area and
see what frequency bands are active. Most action can be found in the
39-40, 42-42, 150-160, 450-451, 453-454, 460-465MHz and 850-861 MHz
ranges. Learn how to use the search feature on your radio and try
scanning these and other ranges. When you get a transmission, try
to look it up under the frequency directory in Police Call to
figure out who it is.
For more help, go to http://www.dejanews.com/ and search for
"How To Find Scanner Frequencies" and read the article written by
Bob Parnass. Be sure to retrieve the full article and not just
one of the "pieces" that the search engine finds. Open one of the
"pieces" and then click on "Get all 7 segments".
Good luck in your quest!

Strong signals,
Rich Wells

From: Rich Wells <rjwells@vnet.ibm.com>
Message-ID: <32E25F3E.41C6@vnet.ibm.com>
Source record: 211108

Sounds about right. You'll only get 5-6 hours depending on amount of
traffic you receive and the volume setting you use. To get the most
use out of ni-cads, make sure you charge them fully(14 hours or so)
and let them drain down till the 3000 starts beeping!

And listening while it is plugged into the wall is fine. Don't
expect to be charging the batteries too much though...it will keep
them "topped off" if they are already fully charged.

##
Hi Brett,
Read your downplay of PL259 connectors above 30 mhz.
I've been using them for years, both as a scannist and in the _1950s_ as
the main connector for RG8 (which at that time was the best coax) on
X,K, and S band ECM (electronic counter measure) antennas for the B52
ECM package while developing experimental antennas at the Boeing ECM
antenna R&D lab.
Seems to me that the VSWR was well below 1.5 to 1.
What data are you basing your statement on?
Something must have changed drastically.
Thanks,
Temp Berdan

From: mshannon@lysias.com
Message-ID: <32e18dd0.203059569@news.sfo.com>
Source record: 211118

In the umpteen posts on Newt, few of which I bothered to read after they started repeating the same stuff, no one seems to have mentioned another possibility.
That this was a conspiracy, yes, but not a political one. Rather the CTIA was behind it to focus attention on cellular monitoring as part of the groundwork for new legislation.
New laws that would establish the Scanner Police who would have the authority to confiscate scanners (and whatever else) from people who make posts, ask questions, provide answers, re cellular monitoring. Perhaps also to make it a felony, where the first offense is now a misdemeanor.
The people who designed cellular made it easy to monitor as well as clone, and rather than spend billions to fix their mistakes, they pushed the ECPA through Congress.
They, the CTIA, have enormous clout, and they just might get it done.

>Matt Brummer wrote:

>> Please let me know of any other states to include.

>Unless one has a ham license, it is illegal in Minnesota as well...

In Florida it's illegal if the unit is "permanently installed".
Permit required in Indiana unless you're a ham or news media.
Kentucky prohibits mobile monitoring of law enforcement.
Michigan prohibits it without permit except for hams.
Minnesota requires a permit for mobile law enforcement monitoring.
Nebraska: "Possession of police-band receivers prohibited for purposes
of personal gain or evading arrest". Yeah. Uhuh.
New Jersey: Permit required for public safety monitoring
Same with New York.
North Dakota you need a permit if it's a company car if I read it
right.
Oklahoma: use is prohibited if you're commiting a crime :)
South Dakota: same as North Dakota.
Vermont: "Mobile monitoring prohibited for purposes of furthering a
crime"
West Virginia: "Monitoring to violate a law prohibited."

So many go without saying, but sound ambiguous. Hope this helps.

ANNOUNCEMENT
Shortwave & Radio Catalog
of Hypermedia Links
http://itre.ncsu.edu/radio

Shortwave / Radio Hypertext Catalog on the World Wide Web (WWW)
serving the radio enthusiasts since March, 1994
#50 #50

AVAILABLE ON-LINE NOW
ISSUE #50

A new on-line catalog of hypertext links to FTP, GOPHER, and WWW files and services for the Shortwave Listener and Radio enthusiast is now on-line. This issue includes links to broadcaster schedules, digital audio files, graphics, mediumwave, shortwave, FM, Ham Radio, FCC, and other files associated with radio.

Over 1400 hypertext links (and still growing) are listed. These include direct links to Shortwave, AM, and FM broadcasters, Solar reports and images, Scanner information files, audio files, internet broadcasting, ham radio info, radio reviews, info for the novice and much more. All these available with a click of your mouse via Netscape, Internet Explorer, or whatever browser (return key for NCSA lynx users), and the catalog is searchable!

The URL to put in your hotlist/bookmark file or Home Page:

In plain english, they can record us, but we cant record them.

As if the deck isn't stacked in their favor as it is, they make
it illegal to create 'proof'. Its ok for you to lie to me, but my using
a "mechanical witness" is not. I'm not talking about violating the
resonable expectation of privacy here. Personal and legal use only.
If you publish, you can be sued, and if you tresspass you can be sued.
And different than now, publishers should have to deal with tresspass
and invasion of privacy after the fact.
(tresspass and copywrite are important in this context)

Look over your sholder at almost any store, check out your workplace,
run another red light, Come on folks, they use hidden cameras on TV
and local news all the time...

Neil R. Ormos <ormos@mcs.com> wrote:

>How do the Uniden 9000XLT and AOR AR-8000 compare to the IC-R8500
>in terms of RF performance?

The Bearcat BC9000XLT is a favorite. However, the ICOM R8500 I have
is markedly more "bulletproof" than my two BC9000XLTs. They are in
very different price classes, too: R8500 costs about $2000
vs. $380 for the BC9000XLT.

In practical terms, if I hear a signal on the R8500, I'm
more confident that it is a legitimate signal transmitted
on the frequency to which I'm tuned than I am when using a BC9000XLT.

Example #1: An intermod product from strong paging transmitters
on 158.7 and 163.25 MHz is generated within the BC9000XLT (and
the new PRO-2045) near 154.155 MHz. The R8500 does not have
the intermod in this case.

Example #2: While the BC9000XLT is no slouch, I can hear images.
Images of cellular radiotelephone conversations
pop up in the 360 MHz range.

Example #3: The BC9000XLT hears cell signals near 1005 MHz, too.

Example #4: There's another source of ambiguity in the
BC9000XLT -- the 322.6 MHz 2nd local oscillator beats with signals
in the VHF-high band and the result appears on another
VHF high band frequency according to the relation:

f1 + f2 = 322.6

For instance, I can hear the 155.535 MHz Cook County Sheriff's
repeater on 167.065, too.

No receiver is perfect, but I wouldn't part with either the
R8500 or BC9000XLTs. They each excel in their own ways.
The R8500 is great for tuning into all "corners" of the spectrum
and is solidly built. It's one of the few receivers with
outstanding RF performance on both on shortwave and VHF/UHF.
I prefer it over the older R7100A and R7000 which I enjoyed, too.

My R8500's VSC is much more effective than the 9000's Data Skip
in distinguishing between voice and nonvoice signals.
The R8500 has a narrow FM bandwidth setting not in the BC9000XLT.
The additional selectivity is handy for separating adjacent

channel interference when listening on interstitial channels.

The BC9000XLT equipped with the optional CTCSS decoder makes
a potent fedband scanner. I consider the BC9000XLT's Auto Store
unsurpassed. Twenty banks of 25 channels is just about the right
memory organization.

For further information see these articles in Monitoring Times
magazine:

March 1995 - BC9000XLT product review
June 1996 - BC9000XLT tips and modification
Jan 1997 - R8500 product review

Reprints of articles from Monitoring Times are available

Sounds good to me, Dave. Maybe if each scanner owner and ham radio operator in the country beat upon his/her congressmen and senators at this most opportune time, along with appropriate copies to the print and broadcast media, a suitable firestorm could be started for the repeal of the ECPA and the disclosure that the cell phone industry bought the legislation.

I have been a scanner nut for many years now. Tonight I seen something I have never seen before.
I went to a friends house and we were discusing the cordless phone frequencies.....he told me he had a 1984 cordless phone that could not be heard on the base side......insisting he was crazy I pulled out the trusty freq. counter and got a reading fron the handset on 49.890 mhz....and then tried to get a reading on the base side. Guess what? No reading.....so we hooked a probe up to the freq counter and I clipped the end to the base antenna....I got a reading of 1.77 mhz.....It just so happens that I brought my AOR2500 down so we could try coppying CW and RTTY on a MFJ he just got......so I whipped it out and tuned down to 1.77 mhz and bigger that shit I could here the base side (both sides of the conversation) I still can't believe this.
The phone was made by Cobra (Dynascan Corparation) in 1 of 1984 and sold by Radio Shack.
The model Number is CP260BA and has some security switch (dip switch) on it.
My question is WHY. And How did they get a license to do this? The range on it is poor.
I have never heard of this before and would have called someone a liar if they had told me this.

Has anyone else seen this phone....just wondering!

Let me be clear, the should be worth about 250 each, not for the set. I am not firm on the prices, but I won't "give" them away, either. these are already modded for cell band use, and the 855 has the 100 channel mod.

Easy, look to see what frequency you are monitoring. If it's between
869.000 and 894.000 you're getting the real thing. If you are somewhat
above that, say 25 MHz above those freqencies, then you're getting an
image.

>
> Are there better ones for about the same price that Grove doesn't
> have?

Tom,
Both of these are fine radios and will serve you well. The
3000 is a triple conversion unit loaded with features. The
230 is a little older technology and uses double conversion.
Basically, the 3000 will give you twice the channels, auto-
store, more search pass frequencies, a per channel attenuator and wider
frequency coverage.
The price differential between these two radios is about
$120 or so($210 vs $335). Obviously, the 3000 is the way to
go; if you can afford it and think the extra features are
worth the extra money. I think they are. And if you live in
a high RF area, the triple conversion nature of the 3000
will pay off in saved frustration in no time!
Batteries run around $30 for the 3000 and $25 for the
230. And they are much easier to change on the 3000 than
on the 230. The 3000 only comes with the AC adapter.
Besides Grove, you might also want to check into ACE
Communications, Hobby Radio Shop, Scanner World and Communication
Electronics. Everyone runs specials from time
to time so it's best if you do some shopping around. And
some places give you more money off if you buy via the
web rather than over the phone.

Sounds like the set-up I have but I have no problems with sound. The quality is not the greatest but good enough. I have a 6' cable with 1/8" male phono plugs at both ends and I plug into the headphone jack of my scanner (actually my ham radio) and the other end into the MIC (or line in) jack to my recorder. My Uniden scanner requires a 3/32 plug so I must use an adaptor to a 1/8" phono plug for it to work. The only thing I really have to be careful is the volume on my radio NOT to be very high or the sound will be VERY distorted! Play with the volume on your scanner and see if it helps. My microcassette recorder, a Panasonic RN-402 which also has a headphone jack and what I do when I record from my scanner is monitor the volume level so not to overdrive and cause distortion.

Oh Yeah, those old cordless phones has the Tx on the base side just above the Broadcast Band...must've been a old sucker, though. BTW, I've got a friend who thinks her OM is steppin'out and she's asked I assist. He wants a cordless for his birthday, but he wants 900. Well, we'll just get a older, cheaper analog model. But how do I disable that darn automatic frequency change every time he goes off hook. If I can fix thge frequency, look at it with my counter, then give her a handheld and she'll do the rest. Any ideas, folks?

Happy Hunting

2360. Frequencies to monitor launches from Vandenberg?

Newsgroup: rec.radio.scanner
Date: 1997-01-19 00:00:00 UTC

Does anyone know of frequencies to monitor to get a clue when a rocket or missle launch is about to happen from Vandenberg Air Force Base in California. I live in Burbank a couple of hundred miles away and want to watch some launches, hopefully up close, but if not, at least from my location here. Is there a warning broadcast to private and commercial pilots when a launch is about to happen? Anything that I could receive with the right equipment?

Jake in Burbank

2364. WANTED: 450 Mhz. crystal or synthesized ALPHA NUMERIC pager

Newsgroup: rec.radio.scanner
Date: 1997-01-19 00:00:00 UTC
From: Patrick Cook <pcook@dimensional.com>
Message-ID: <Pine.SUN.3.95.970119015415.14337A-100000@nova.dimensional.com>
Source record: 211161
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.swap,rec.radio.amateur.misc,rec.radio.scanner

Hi everyone:

I am looking for a 450 Mhz. crystal or synthesized ALPHA NUMERIC pager capable of receiving (or recrystallable to receive) the frequency of 449.750 Mhz. Reason being one of our local clubs has a repeater on the 449.750- repeater pair capable to transmitting to pagers as if the pager was a radio receiving packets.

The pager **MUST** be 512 bps. POCSAC on the 70 cm meter band and a Motorola brand (There are several companies here in town where I can go to have the crystal installed). I'd prefer an Alpha Numeric pager over a numeric one because of the various message codes that are uninterpretable by a numeric pager.

I have an AT&T numeric pager capable of receiving a frequency of 158.700 Mhz. for trade.

If you wish to recrystalize the 70 cm. pager before shipping or if you have a pager that meets the aforentioned requirements, please drop me an email at pcook@dimensional.com to discuss logistics of such a trade. Each party pays for their own shipping and handling charges.

If you'd like to BUY the AT&T pager, email me at the above address to discuss price (I'm willing to offer $30 bottom price).

Many thanks in advance and 73's for now my friends!! :-)

Minnesota Statutes 299C.37 - Police communication equipment; use, sale
Subdiv 1(a) No person, other than ... persons who hold an amateur radio
license ... shall equip any motor vehicle with any radio equipment ...
capable of receiving any radio signal ... from any police emergency
frequency ...

> The states I know of: ....

According to the Listener's Lawbook (Terranella, Grove Enterprises,
ISBN 0-944-543-10-3), scanners are prohibited in cars in:
FL, IN, KY, MI, MN, NY, VT, WV
In all cases, hams are exempted. Additionally, the FCC (Opinion and Order
93-410) has ruled that state and local laws restricting ham transceivers
that can receive out of band are preempted by federal law.

Yes, I recall the early USA cordless phones.

Used to hear the 1.7 MHz phone transmissions while I was SWLing
for beacons between the top of the AM broadcast band and
the 160 meter ham band. Reception required a decent (large)
outdoor antenna.

I logged cordless transmissions on these frequencies during
the 1983-1985 period:

1.6663, 1.6717, 1.7284, 1.7353, 1.7530, 1.7600,
1.7652, and 1.7717 MHz

Ace Communications is not considered to be among the most reputable, at least not by people who've done business with them. I would suggest Tucker as a alternate source for the 9000. They're not necessarily the cheapest, although they are competitively priced on the items that I have purchased from them.

>70-83, and on your dental gold fillings. <Grin>

Some years ago, a person in- I think was Iowa or Oregon- was
prosecuted for monitoring cordless phone.
He appealed to the state Supreme court and the conviction was
reversed.
The state appealed to the US Supreme Court, who refused to hear the
case.
On the basis of that precedent, it is possible that prosecution would
be declined. However, no one can predict this for sure.
Monitoring cellular, as well as cordless, used to be a misdemeanor,
not a felony, for the first time.
I don't know if the law has changed since then.
Will try to find the citation for this case and post it if anyone is
interested.

Could be one of two things :
1) One of your radios uses double conversion and you are
getting an image onto this same frequency
2) They are indeed sharing this frequency and each is
using a different PL tone.

I would suggest getting a frequency guide and find out what
frequencies each are using. If they are both licensed for this
same frequency, then #2 is the answer. If not, use the IF of
either/both radios to see if one frequency is showing up as
an image(actual_frequency +/- (2 * IF) = heard_frequency).

For what its worth... This is nothing new. The police department, CIA and FBI can enter ANY telephone exchange and monitor ANY phone call, and there is no device that can detect this. This is for our "protection". Also, the US has an extremely large office area, staffed with many people, just to monitor phone conversations via satellites and microwave transmitters.

Yes. All the Realistic and Uniden scanners in Canada are exactly the
same as they are in the USA. They don't cover the Cellular band.

I just picked up a BC9000 and it has those frequencies blocked out also.
It pisses me off to be sure. I do have other means to listen to
Cellular if need be. Cellular is probably the last thing that I would
listen to anyway. Nonetheless, I'm dissappointed that Uniden didn't see
fit to make a '9000 specifically for the Canadian market.

2386. XPLORER INTERFACE WITH GPS

Newsgroup: rec.radio.scanner
Date: 1997-01-20 00:00:00 UTC
From: "James F. Boehner, MD" <jboehner@csra.net>
Message-ID: <32E3FE23.5E18@csra.net>
Source record: 210783
Cross-posted to: rec.radio.scanner,alt.radio.scanner

For those with the XPLORER or thinking to get one to interface with a GPS, I received some disturbing news.

Opto advertises the XPLORER interfacing with a Trimble GPS unit. Apparently the XPLORER works with any unit with a NMEA-0183 output, as is advertised. Unfortunately, thats not true. There are two outputs available for GPS units, TTL and RS-232 outputs. I could not get my XPLORER to interface with the Magellan 3000. I sent in the XPLORER to OPTO, and they told me it worked fine with the Trimble unit. I called Magellan and they admitted TTL output from the Magellan 3000.

In short, the XPLORER and the Magellan 3000 are not compatible. Apparently a TTL to RS-232 converter is necessary.

Is there anyone who has info to purchase or build a TTL to RS-232 converter (SMALL!-THE WHOLE IDEA WAS FOR PORTABILITY)? Any help will be greatly appreciated. The OPTOLYNX supposedly can do this, but it's not very portable!

I hope OPTO will consider making a small converter in the future.

the
price and service. It is a very nice scanner. You will pick up 25-1300 MHz (minus
cellular) with 500 memory channels. You can scan 300 channels per second in the search
mode. I highly reccomend this unit, but the optional CTCSS tone board is a must.

The LAPD never taped the conversations that OJ made to his mother
and other people! The only calls that they would have taped are
the 911 calls made during the chase.

The LAPD also had the Cellular Phone Company locate phone the phone
for them.

The only tape(s) that I heard of are the ones that were made by
various Scanner listeners during the chase!

Source record: 210789

Does anyone have any freqs for the IMSA cars for daytona. My wife and I are planning on attending the 24 hour race and would like to listen in on the drivers. We have attended races at Watkins Glen and really enjoy being in the know. We hear about spins and cars to watch before the PA or TV anouncers (we also listen to them on the scanner) say anything.

Just some info if anyone cares about our set up. When we are camping at the track and not in the grandstands. We have a pro-34 hooked up to an amplified Radio Shack speaker (the kind made for hooking up to your walkman). When we crank the scanner thru the speaker we can hear it over the racecars and all. When we are up in the grandstands we have an AOR-1000 hooked to a pair of aircraft headphones. The headphones have seperate volume controls on each pair so we can each adjust the volume to our personal taste. The reason for the different scanners is that when we are in the grandstands one of us holds the scanners and the AOR makes it easy to start scanning at any channel during a scan just by pressing the bank key where you want to start scanning. Its more of a hands on thing. When were at the camper were more laidback were doing other stuff aswell as watching the race, cooking, eating, talking to passers-by that hear tha scanner and think we're with a team of officials or something. We just program in our favorite drives the corner workers and let the scanner be.

Thanks
Ben

>>Besides not being type-accepted...[why not use my Amateur HT on
>>GMRS...]

That's the major violation...you're violating FCC rules.

Is it done all the time? Yes. Is it legal? No.

It sets a poor precedent in your sphere of influence - whatever that may be. It violates the "spirit" of Amateur Radio.

I, personally, refuse to recommend performing this particular modification to the 300+ Members of the SoCalifornia Repeater Users Group, which I am President. There are a couple excellent GMRS HTs available in the $200. price range for true GMRS work.

It's up to you, of course. Will the mod negatively affect any sensitivity specs of your HT? I'm not sure. Will it violate your warranty? Maybe.

s
> heard discussing his pending ethics violation hearing with other GOP
> House
> leaders. Such a feat is so improbable, several experts claim, that som=
e
> level of professional assistance had to have come into play.

The Martins do seem to be rather...unsophisticated... people, and the
claim that they recorded the call for the benefit of an unborn
grandchild sounds stupid to me (yet, the Martins IMHO are stupid
people...). How many people here recall who the Speaker of the House was
20 years ago? OK, I think it might have been Tip O'Neil, but does the
average person --let alone the average contemporary 20 year old kid--
care about Tip and a phone call of his?

But if this was some plot by the Demoncrats to make Newtie look bad,
they're either sacrificing the Martins on a cross, or shame on them for
not coming up with a more plausible story!

=

> At the center of the controversy are John and Alice Martin, a Florid=
a
> couple who have admitted taping the Gingrich call. The Martins say the=
y

Accidentally stumbled on the call in question, while deliberately
tuning in cellular phones!

> The couple claims to have
> recognized Gingrich=B9s voice and turned on a handheld tape recorder to=

Does Newtie have a distinct voice? I think they initially just found
the subject matter to be of interest, and then later realized who some
of the players were. It will be interesting to learn what else was on
that tape, prior or after to the Newtie call, and any intelligence on
the tape that was erased/recorded over, but can easily be recovered by
the FBI. Maybe they were in the habit of recording a variety of
cellular calls, for the amusement of themselves or others, or even for
potential blackmail usage.

> preserve a =B3part of history.=B2 The couple then gave the tape to Rep=
=2E Jim
> McDermott, D-Wash. Someone then leaked the tape to The New York Times
> and the Atlanta Journal-Constitution.

Gee, I wonder how a tape delivered to a Congressman could have
subsequently found it's way to the media? ;)

=

> The Federal Bureau of Investigation has begun an investigation of th=
e
> taped call; the interception and disclosure of a cellular phone call ar=
e

=B2
> an FBI source said. He declined to elaborate, emphasizing that the
> investigation was =B3only in the preliminary stages.=B2

Sounds like the FBI hack is ignorant about scanning. If the emphasis
is on "entire conversation," my understanding is that the politician
using the cellular phone in Florida was *parked* in a restaurant parking
lot while his family was inside the restaurant. Hence, negligible
cell-hopping & the eavesdroppers having to do some quick searching to
recover the traffic on another freq/cell site.

=

> There=B9s little chance a =B3scanner buff or rank amateur could zero=
in
> on
> [this call] and get the quality and clarity of transmission that was on=

> that tape,=B2 said Bill Cheek, a San Diego, Calif.-based professional
> =B3radioist.=B2 =

Apparently, Billy heard the tape. I haven't. Don't know what was
meant by "quality and clarity of transmission" (sic), unless it means

that there's no background noise such as any ambient sounds from within
the Martin's car other than the scanner audio (i.e. can't also hear the
Martins giggling & plotting in the background), which implies the
recorder was plugged-in to the scanner's audio output.

> Cheek, an Internet celebrity among those who traffic on

But
> for this to =B3happen by chance=B2 would =B3be a rare situation."

Utter BS. Call can be found by general fishing (searching),
spot-fishing (only monitoring a certain cell site), or by specific
targeting (how many times have you had some cute blond drive by you
talking on her cellular, and you immediately start searching thru the
CMT inputs with the antenna off util you lock in on her, then add 45 to
the input freq to get the output?!). The Martins were politically
active. They could have easily been doing some general fishing, and
gotten interested in the political content of one call, which they later
realized was a Republican cabal conference call...

k
> down the infamous computer hacker Kevin Mitnik in 1995.

Great, but not really relevant. We're not talking about punching in
a MSN/MIN/NAM into a gizmo & have it automatically alert, track & record
calls by the targeted phone. We're talking about 'fishing.' Besides,
there's plenty of software & peripherals sold on the hobbyist market
that does the major functions of Ted's Cellscope (and for probably
thousands of dollars less than what the Fedz buy Cellscope for).
=

> Professional surveillance and security experts know how difficult th=

,=B2
> said James Ross, president of Ross Engineering, =

How does one judge "clarity" based on a transcript? Again, I'd tend
to agree that it is difficult for a hobbyist to follow a moving party's
call without loosing at least a few seconds of conversation when the
call switches to a new cell site/channel. Is that the ASSumption that
these "experts" who were interviewed by MSNBC made? A real "expert"
wouldn't assume...

> Ross, who previously worked in various security positions for the
> U.S.
> government,

Um, is that supposed to instill confidence in & respect for his
opinions? ;)

> transmission, which when scanned, sound like static.

They've been told that standard cellular phones were NON-SECURE. =

They're just too lazy to always keep that in mind. Secure cellular has
been available for gov't execs with a need in the DC area for 'many'
years.

=

> Additionally, Rep. Billy Tauzin, R-La., new chairman of the House
> Telecommunications Subcommittee, said he would call for hearings on the=

> issue of cellular phone security. Those hearings would be aimed at the=

> privacy issues surrounding cellular phones and exploring the possibilit=
y
> of a technological fix.

=

Golly, I guess this means that the ECPA of '86 wasn't good enough?! =

Isn't that what many of us tried to tell those Congressional MORONS over ten years ago -- that the best way to truly protect something was =

by mandating technology like encryption, instead of just passing a law that says "Don't listen in!" If Congress had their act together (or at least not listened to the lying, soothing words of the cellular industry, who didn't want to shell out the $$ on real protection), they would have mandated encryption many years ago. But alas, apparently the best way to get them to take real action is to get one of THEIR people caught up in a public mess as a result of the deficiency/vulnerability.

The Computer-Aided Scanner FAQ
Version 1.0

by Michael Alexander, Copyright 1996
malex007@earthlink.com

This is Release 1.1 of the Frequently Asked Questions (FAQ) about Computer-Aided Scanning. As with early releases of software and humans there are bound to be mistakes, important things missing and topics that could be expanded upon or enhanced in some other way. I would appreciate hearing what suggestions you have for improving this FAQ. Send comments to malex007@earthlink.net. The mention of any products in this FAQ should not be interpreted as an endorsement of the product or its manufacturer. On the contrary, I suggest that you look at the claims made by vendors with a critical eye and consider that their prime objective is to get you to part with your hard-won dough at virtually any cost.

Section A: Why Bother?
Section B: Computer-controlled scanners
Section C: Making the Connection
Section D: Interfaces
Section E: Scanning Software

Section A: Why Bother?

Why would I want to connect my scanner to a computer?

With the right software and interface, you can enhance the capabilities of your scanner as well as avail yourself of capabilities that the scanner would not ordinarily have. Here's a quick look at some of the potential benefits of computer-aided scanning:

-- increased scanning speed;
-- ability to automatically load and reload frequencies into the scanner;
-- decode and log CTCSS, DCS and DTMF tones
-- access to frequencies that are locked out or not available on the scanner;
-- ability to dump frequencies from a CD-ROM into the scanner.
-- manage frequencies in a wide variety of ways using a database;
-- visual display of signal strength
-- tape recorder control
-- and more....

Notice, I said "potential benefits." Exactly what capabilities you'll have depends on the combination of scanner, interface and software that you use.

Section B: Computer-controlled Scanners

What scanners can be controlled by computer?

Given time, money and technical expertise, probably any scanner can be controlled via computer. However, scanners that are readily adaptable for computer-aided controls are as follows:

AOR: AR5000, AR3000, AR3000A, AR8000, AR2700
Icom: R7000, R7000-2, R7100, R7100-2, R9000, R8500
Radio Shack: PRO-2004, PRO-2005, PRO-2006, PRO-2035, PRO-2042

AOR5000
This is the AOR's newest top-of-the-line base scanner. It covers 10khz to 2600 Mhz (no gaps); and features an RS-232 port for computer control. Price: $2200-$2300.

AOR3000 and AOR3000A
Base scanner covering 100 Khz to 2036 Mhz. The A model is cellular blocked. It features an RS-232 port. Price About $110

AOR8000 is AOR's top-of-the-line handheld scanner. It sells for about $600 to $630, depending on whether it is a blocked or continuous model capable of receiving cellular frquencies. If you purchase an AOR, or any other scanner for that matter, from a Canadian or overseas dealer, there is a good chance of your getting hit with customs fees. I don't know what the logic is for how customs fees are assessed, but it seems to be about 5 percent of the purchase price.

AOR2700
Handheld scanner that covers 500 Khz 1300 Mhz. It sells for about $200, about half of its original cost because it is slated to be discontinued.

Radio Shack PRO-2004/5/6: These scanners are no longer being manufactured. Used PRO-2006s, the most current of the three models, regularly sell for $275 to $350. New PRO-2006s typically sold for $375 to $400.

Radio Shack PRO-2035: The PRO-2035 is no longer being manufactured but is still readily available (new) from many Radio Shacks in the United States as well as in Canada, Europe and elsewhere. Because this model has been discontinued, it is heavily discounted to about $200 (down from the original list price of $400) by Radio Shacks across the country as well as by mail order companies.

The PRO-2042 is Radio Shack's current top-of-the-line scanner. It sells for about $430 to $500 and is readily available from many Radio Shacks across the country as well as Canada, Europe and elsewhere. Best prices are generally available from mail order companies such as Pioneer Data (503-982-5115). Check Popular Communications and Monitoring Times for the ads and telephone numbers. One word to the wise, mail order companies will stiff you by adding hefty $20-$30 shipping and inflated "handling" fees.

Section C: Making the Connection

How to I hook the scanner up to a computer?

The way that scanners and computer "talk" to each other is by means of an interface. You need an interface that understands RS232 or CV-I and software. Some scanners have the interface built in; others require that you purchase an interface that is either installed in the scanner or connected between the scanner and the computer.

How much does an add-on interface cost?

External interface costs between $100 and $300.

How much does software cost?

Software sells for $30 to $150.

Can I listen to frequencies that my scanner is not capable of receiving?

For the most part, no. If your scanner does not receive frequencies between 800 Mhz and 900 Mhz, hooking it up to a computer will not give it capabilities that the scanner itself does not have. There is one interface, the Optoelectronics OS535 when installed in either the PRO-2035 or PRO2042 Radio Shack scanners can be made to receive frequencies in the cellular telephone range. (More about that later).

What computer platforms can I hook up my scanner to?

Virtually any computer can be used to control your scanner. However, unless you're planning to write your own software, you have but two basic choices: IBM PCs and compatibles and Apple Macintosh. Not surprising, the majority of computer-aided scanning programs run on IBM PC and compatible machines. As you would expect, there are both commercial and shareware versions available. This FAQ describes the current offerings and providers pointers on where to get demo versions as well as shareware.

What else do I need?

A cable, of course.

PC: You need a standard RS232 serial cable, which will plugs into a comm port on the PC on one end and into the interface on the other end.

Mac: You need a standard hardware handshaking modem cable, with 9 pin on one end and RS232 on the other. You may also need to use a variety of adapters to go from the RS232 25-pin to RS232 9-pin.

If you don't have a spare comm or modem port, buy a switch box that allows you to switch between two devices (about $10-$15 by mail order).

Section D: Interfaces

Product: OptoScan 456 and OptoScan 535
Price: $299 (either model)
Manufacturer: Optoelectronics
Address: 5821 NE 14th Ave., Fort Lauderdale, Fla. 33334
Telephone: 305-771-2050
Fax: 305-771-2052
Email: N/A

URL: http://www.optoelectronics.com

Supports: OptoScan 456 is designed for the Radio Shack PRO-2005 and PRO-2006; the OptoScan 535 is designed for the Radio Shack PRO-2035 and PRO-2042.

The OptoScan 456 (OS456) is an add-on computer interface board designed to fit into the Radio Shack Model Pro-2005 or PRO-2006 receivers.

The OS456 allows for complete computer control of the receiver. It will not only tune the radio, but increases scanning speed up to 65 channels per second (depending upon the software used). It also provides decoding of CTCSS, DCS, and DTMF (Touch Tone) and much more.

At 65 channels per second, the OS456 can scan at more than twice the rate of an unmodified Pro-2005/6, ICOM R7100, AOR 8000, or any other scanner using computer control. The faster your receiver can scan, the less chance you have of missing any conversations.

The OS456 and OS535 include built-in CI-V to RS-232C serial interface converter for application in which a receiver is connected to a computer. Its purpose is to convert the CI-V interface voltage levels to RS-232C levels compatible with most personal computers. This feature eliminates the need for an external interface converter box. In addition, the RS-232C interface provides pipeline tuning, resulting in the ability to increase the scanning speed of the OS456 by up to 65 channels per second and to increase the scanning speed of the OS535 by up to 80 channels per second (perhaps as high as 100 cps).

In addition to providing the PRO-2035 and PRO-2042 with computer-aided scanning, the Opto 535 can also be used to capture frequencies in the 800 Mhz cellular range. The key is to obtain the code to "unlock" this capability. The unlock code is 27568114936463053849. This code is entered via Probe, Scancat or other popular scanning program .

Cellular reception capability exists only when the scanner is hooked to a computer. Depending on the software you use, you may or may not have to unlock the cellular feature each time you wish to monitor those frequencies.

One alternative is to purchase the OS535 from a Canadian, European or other supplier outside of the United States. These interfaces have readily accessible 800 Mhz reception ability and need not be unlocked.

The Opto 456 does not have this feature because the PRO-2005 and 2006 can readily be modified to receive cellular telephone transmissions.

The OS456 and OS535 are supported by most of the popular scanning software programs such as Probe, Scanstar, Scancat, Scannerware For Windows, And Radio Manager For Windows.

One of the most exciting features of the OS456 and OS535 is that these interfaces can be used with Optoelectronics' Scout, for Reaction Tuning. The Scout will automatically tune the PRO-2005/6 and PRO 2035/42, ICOM

R7000, R7100, and R9000, or AOR AR8000 and AR2700 to the frequency it records. The frequencies may also be recalled from the memory of the Scout to tune the receiver.

Features

-- Interfaces with the Pro-2005 or 2006 VHF/UHF scanner
-- Decodes CTCSS, DCS, and DTMF (Touch Toneï¿½)
-- Scans up to 65 channels per second
-- Built-in CI-V, to RS-232C serial interface converter jack
-- Receives VHF/UHF from 25-519.995 MHz and uninterrupted 760-1299.95 MHz
-- Supports AM, FM-narrowband and FM wideband modes
-- Supported by the following software programs:
Probe, Scanstar, Scancat, Scannerware For Windows,
and Radio Manager For Windows
-- The Scout; automatically tunes the Pro-2005/6 when equipped with the OS456
-- Import files from the PerCon FCC database into either Probem ScanCat or RCSI

Product: Optoelectronics CX12AR
Price: $99
Manufacturer: Optoelectronics
Address: 5821 NE 14th Ave., Fort Lauderdale, Fla. 33334
Telephone: 305-771-2050
Fax: 305-771-2052
Email: N/A
URL: http://www.optoelectronics.com

Supports: AOR 27000, AOR8000, Icom 7000/-2, Icom 7100/-2

This interface has been replaced by the OPTOLINX (see below) but is still widely available. The interface supports both full duplex (as used by the AR8000) and half-duplex modes (with ports for 3 radios, used for equipment that supports CI-V, such as Icom receivers, the Optoelectronics Scout, etc.)
- Includes an external power supply
- Provides a computer-controlled relay output, for use by tape recorder, etc.
- Provides a generic squelch status line input (usable with the AR8000) -
Connections to the CX12AR are through 3.5mm stereo mini-jack patch cables (full duplex) or 3.5mm mono mini-jack patch cables (half duplex)
- Includes a "Flexible Flat Cable Adapter" to convert the 7-pin FFC connector of the AR8000 to two 3.5mm stereo mini-jacks, one of which provides data, the other of which provides squelch information.
- Includes 25-pin RS-232 cable and 2 3.5mm stereo mini-jack patch cables
- Approximate size is 10 cm (W) x 5 cm (D) x 3 cm (H)

Product: Optoelectronics OPTOLINX
Price: $129
Manufacturer: Optoelectronics
Address: 5821 NE 14th Ave., Fort Lauderdale, Fla. 33334
Telephone: 305-771-2050
Fax: 305-771-2052
Email: N/A

URL: http://www.optoelectronics.com

The OPTOLINX PC-Radio universal interface replaces the popular CX12AR. The OPTOLINX sits between a wide variety of radios, scanners, decoders, frequency counters, frequency recorders, GPS receivers and other devices and the RS-232C serial port of a PC.
It features:
-- special provisions for connecting the AR2700 and AR8000 to a PC for full featured computer control scanning, while enabling the user to control multiple radios at one time;
-- interface the AOR AR3000A with the DC440 decoder and the OPTOLINX to allow for decoding of DCS, CTCSS, and DTMF.
-- interface with an NMEA 0183 compatible GPS or LORAN receiver. and any communications receiver with a data port to receive longitude and latitude coordinates for any signal the receiver receives.;
-- interface to the Scout frequency recorder for the downloading of Scout frequencies in memory;
-- use the M1 Frequency Counter with Optolog software for computer controlled datalogging of all frequencies the M1 captures.

Product: AOR CU-8232
Price: $125
Manufacturer: AOR
Address:
Email
URL
Supports: AOR AR8000, AR2700. Not sold in the U.S., but can imported from Javiation (http://www.demon.co.uk/javiation) and other companies.

Feature Highlights:

-- Transfer frequencies and other data from one AR8000 to another
-- Does not need an external power supply (it's powered by the AR8000)
-- Includes 9-pin to 25-pin adapter
-- Includes 9-pin gender changer
--- Includes two Flexible Flat Cables to connect AR8000 to CU-8232
--- Approximate size is 75 mm (W) x 30 mm (H) x 123 mm (D)

Product: AR8000INF
Price: $100
Manufacturer: EDCO
Address: 325 Mill St., N.E., Vienna, Va. 22180
Telephone: 703-938-8105
Fax: 703-938-4525
Email: N/A
URL: N/A

Supports: AOR AR8000, AR2700. Similiar to the AOR CU-8232 but does permit cloning from one AOR8000 to another.

Feature Highlights:

-- Does not need an external power supply (it's powered by the AR8000)
-- Inlcudes PC sotware
-- Extra shielding to reduce interface is available as an option
-- Squelch status line on one of the RS-232 pins
-- Approximate size is 6 cm x 5 cm x 2 cm

Product: CE-232
Price: CE-232 (kit): $194.95; CE-232 (assembled): $244.95; CE-232 (assembled and installed): $344.95; CE-232 (assembled and installed in an external box): $344.95
Manufacturer: COMMtronics Engineering
Address: PO Box 262478, San Diego, CA 92196-2478
Telephone: 619-578-9247 1:30pm-5:30pm
E-mail: bcheek@cts.
URL: http://ourworld.compuserve.com/homepages/bcheek

Supports: Radio Shack PRO-2004, PRO-2005 and PRO-2006. COMMtronics claims the CE-2323 is also compatible, although with less functionality, with other base and handheld Radio Shack scanners. Contact the company at the above address for more information.

System Requirements: The CE-232 interfaces with any IBM PC or compatible with a minimum of 512 KB RAM capable of running MS-DOS 3.1 or higher and. It also operates on PCs running Windows 3.1, Windows For WorkGroups 3.11 and Windows 95. The CE-232 connects to the computer's serial port (COM1 or COM2) via standard serial cable (not supplied with the unit).

Feature Highlights:

-- Automatically program 1-999 channels from ASCII text file
-- Automatically reject birdies or other undesirable frequencies
-- Operate the scanner via the PC's keyboard
-- Automatically log frequencies for unlimited periods of time,
-- Automatic lookup that displays line of data related to a particular frequency
-- Text editor for editing and reviewing log and configuration files
-- Script language to automate scanner operations

Product: RS-232 to TTL Cable Converter
Price: $130
Manufacturer: Applied Computing Systems, Inc.
Address: 120 Longview Drive, Los Alamos, New Mexico 87544
Telephone: 505-672-4003
Fax: 505-672-4103
Email: sales@acsys.com
URL: http://www.acsys.com

Feature Highlights:

-- Does not need an external power supply
-- Comes inside a 25 pin female RS-232 housing.
-- Comes with a six foot 3.5 mm (1/8 inch) cable.
-- Half-duplex. Full-duplex version under development.

The RC-125 Tone Interface Box

RC-125i Computer Interface

-- The New RC-125 hardware interface module:
-- Allows complete computer control scan of the following radios:
-- RC-125i for ICOM R-7000/ 7100/9000.
-- RC-125a for AOR 3000A/8000.
-- AOR 8000 requires special cabling.

Features:

-- Hardware interface module that contains built-in level converter and squelch detector.
-- This eliminates the need for the CT-17.
-- This allows programmed scanning using CTCSS, DCS, & DTMF with:
-- ICOM R7000, R7100/9000, & AOR 3000a/8000.
-- You must use ScannerWEAR 2.0 and above to implement full features of the RC-125 interface.
-- (2) CI-V ports, may be set for half or full duplex.
-- (1) RS-232 computer port (1) RS-232 radio port.
-- Audio Input port for speaker or discriminator audio. (Note: most tone traffic needs discriminator audio.)
-- Squelch input port for fast squelch detect.
-- Optional daughter board for LTR trunk following.

Section D: Scanning Software

The features and capabilities of computer-aided scanning software described in this FAQ were culled from documentation and other material supplied by the manufacturers of the software. Where possible, I have included my observations based on first-hand experience with a particular product but I have not tested every product on the market to verify the claims made by the manufacturer.

All reputable software vendors provide demo versions of their products, which can be downloaded from a variety of sites on the Internet. I suggest that you try whatever software interests you before you actually buy it.

Common features of commercial and shareware scanning software:

-- Scan between frequencies
-- Scan individual and multiple banks
-- Scan frequencies maintained in a log
-- Specify search limits, search steps, delay mode, demodulation and other scanner capabilities in separate windows
-- Decode CTCSS, DCS and DTMF codes
-- Tape recorder control
-- Skip birdies and other undesirable frequencies
-- Fast scanning
-- Frequency database
-- Loads and scans PerCon FCC data on CD-ROM
-- Log active frequencies and tones and maintain chronology
-- Signal strength detection,
-- Squelch on a specific signal strength range

What commercial software is available for PCs?
In no order of particular importance:

ScanCat Gold--Computer-Aided Technologies
Scanstar
Radio Manager
Probe

What shareware software is available for PCs?
ARUtil
Comm 3 (?)

What commercial software is available for Macs?

At the moment, there are no commercial software programs available for the Macintosh. However, it is possible to run PC-based software on Macs equipped with SoftPC and SoftWindows PC. As you might expect, the programs run slower than they ordinarily would but are still quite useful for programming, managing frequencies and other benefits to make it worthwhile. If you already have a Mac and SoftPC or have no plans to buy a PC, it's an option worth consideration.

What if just invest in a PC just to run a scanner?

If you can afford it, or you're that serious about scanning, it makes sense. You'll have more software alternatives to choose from and you'll run the scanner at top speed. Many outmoded PCs built around an Intel 80286 or 80386 are suitable for controlling a scanner and can be bought for a few hundred dollars. If you got this route, keep in mind that you're probably going to run MS-DOS on a machine with only 1-2-4 megabytes of RAM so look for software that does not require much memory.

What shareware software is available for Macs?

WAVE, by Adaptive Technology, which controls Radio Shack PRO 2004/5/6 scanners equipped with an Optoelectronics 456 interface and Radio Shack PRO 2035/42 scanners equipped with an Optoelectronics 535 interface.

AOR8000 Toolkit, by Eddy Works, controls an AOR8000 equipped with one of the three popular interfaces available.

Descriptions of each product:

Product: WAVE (shareware)
Price: $95 sent to buyer electronically; $120 on disk
Manufacturer: Adaptive Systems
Address: 215 Fishing Lane, Wood dale, Ill. 60191
Telephone: (708) 766-2887
Email: mikeasl@aol.com
URL: Not available

Supports: Radio Shack PRO-2005 or PRO-2006 with OptoScan 456 or Radio Shack PRO-2035 or PRO-2042 with OptoScan 535.

System Requirements: Apple Macintosh with System 7.1 or higher (7.5.1 recommended); 1 MB RAM; 2 MB free hard disk space. Also requires specially configured serial cable for optimum performance (see program documentation). Optional: Speech capabilities available if Sound Manager 3.0, Speech Manager 1.0 and a voice are installed. Note: The Mac Classic, Plus and SE do not support Sound Manager 3.0.

WAVE requires a specially configured cable to access all of the features of the program. See the documentation that comes with the demo version of the program for more details.

Feature Highlights:

-- Scan between frequencies
-- Scan frequencies maintained in a log
-- Specify search limits, search steps, delay mode, demodulation and other scanner capabilities in separate windows
-- Decode CTCSS, DCS and DTMF codes
-- Tape recorder control
-- Speech options reads out frequency and time
-- Skip birdies and other undesirable frequencies
-- Chronology of hits

Product: AOR8000 ToolKit (shareware)
Price: $30
Manufacturer: EddyWorks, a subsidiary of The Eccentricity Group
Address
Email
URL: http//www.mich.com/~eddy/works.

Supports: AOR8000 equipped with either AOR CU8232, EDCO AR8000INF, or Optoelectronics CX12AR interfaces.

System Requirement: a Macintosh running System 7 or higher.

Feature Highlights:
-- Auto program frequencies and labels
-- Drag-and-drop organization of frequency banks
-- Balloon Help
-- Displays same typeface as seen on AR8000's LCD.
-- Edit search banks and scanner settings
-- Edit auto-mode bandplan table

Software for PCs.

Product Name: Probe
Suggested Retail Price: $99.95
Manufacturer: DataFile, P.O. Box 20111, St. Louis, Missouri, 63123
Telephone: N/A
URL: DataFile@GEnie.com

Supports: Radio Shack PRO-2004/5/6 or PRO-2042 scanner equipped with Optoelectronic's OptoScan 456 or 535 computer interface; IBM or IBM compatible computer using MS /PC DOS version 3.3 or higher; 640K RAM, hard

disk, serial port (COMM 1, 2, 3 or 4). Optional: Printer.

Note: Version 2 is about to be released at $99.95, normal price will be about $120. There will be an update to this FAQ soon.

Features:

-- Fast scanning, up to 94 FPS with the OptoScan 535
-- "On-line tuning" from frequency and log file viewers
-- True database engine (dBASE format)
-- Loads and scans PerCon FCC data on CD-ROM
-- Log active frequencies and tones including DTMF
-- Comprehensive scanning screen information
-- Status indicators for frequency, codes, and more
-- Scan up to 99 banks to scan at one time
-- Up to 4000 groups of 99 banks
-- Signal strength detection,
-- Squelch on a specific signal strength range

Product Name: AOR Searchlight
Suggested Retail Price: $
Manufacturer:
Telephone:
URL:

Supports: AOR AR-3000A or AR-3000; 25 MHz 80386 IBM PC compatible or above; 4 MB RAM; Microsoft mouse; at least two RS-232 serial ports (one for mouse); 2 MB free disk space; Microsoft Windows 3.1 (or higher) or Microsoft Windows for Workgroups 3.1 (or higher) running in enhanced mode. Requires a specially configured serial cable (company provides instructions). Optional: Printer; Windows multimedia compatible sound card (highly recommended). A cable with a 3.5 mm plug is required to connect the audio output of the radio to the PC sound card (connectors on the sound card vary).

Feature Highlights:
-- Runs under Microsoft Windows
-- On-line context sensitive help
-- Unlimited number of disk based memory banks.
-- Includes utility to import AOR Spectrum Coordinator memory
-- Copy data to/from clipboard
-- Memory scan and Programmable Band Scan
-- Graphical analysis showing full statistics compiled as the SFW is in progress and includes text based reports and a log file.
-- Spectrum analyzer display
-- Supports Windows Sound Recording (requires a Windows compatible sound card)

Product Name: PC-MANAGER for DOS
Suggested Retail Price: $
Manufacturer:
Telephone:
URL:

Supports: AR8000 with AOR CU8232 remote control interface

System Requirements: 80286 PC compatible (or higher); Microsoft DOS v3.0 or PC-DOS v3.0 or higher ; 1M byte of DOS memory (640k bytes of base memory); Microsoft mouse or equivalent (strongly recommended); 1MB free hard disk space or twin 720k bytes floppy disks; at least two RS-232 serial ports (one for mouse if used). Optional: Printer.

Feature Highlights:

-- On-line context sensitive help
-- Memory, search and auto mode data; cut and paste or edit each line of text in a number of text windows
-- Auto line number when adding memory data.
-- Renumber each line of search or memory data.
-- Set password, search and scan parameters with simple dialogs.
-- Send memory, search or auto mode data to your radio or print it out.
-- Edit auto mode data to define your own setup and send it to the radio.
-- Import and export memory and search bank data into raw format (for interoperability with your existing data)
-- Choose the serial port parameters to suit your radio.
-- A built-in terminal is also provided for full control of the AR8000

Product Name: PC-MANAGER for Windows
Suggested Retail Price: $
Manufacturer:
Telephone:
URL:

Supports: AR8000 or AR2700 with AOR CU8232 remote control interface

System Requirements: 80486 PC compatible (or higher); Microsoft WindowsTM 3.x or Windows 95; 8MB RAM; Microsoft mouse or equivalent (strongly recommended); at least 2MB free hard disk space; at least two RS-232 serial ports (one for mouse). Optional: Printer.

Features:

-- Comprehensive and powerful editing features for memory, search, auto mode and pass frequency data including intelligent cut/paste, line renumbering and syntax checking (for auto mode data)
-- On-line context sensitive help
-- Set the password (not supported with AR2700), search, scan and many other parameters of the radio with simple dialogs.
-- Send memory, search, auto mode or pass frequency data to your radio or print it out.
-- Edit auto mode data to define your own bandplan setup and send it to the radio.
-- Execute searches and scans within the radio for maximum tuning speed (approx. 30 channels/s)
-- Execute duplex searches and scans from the PC (not available with the AR2700)
-- Record audio from the radio automatically during searches and scans in an audio log (PC sound card required, not included)

-- Display the spectrum when searching, measure frequency and signal strength

Product Name: Scan*Star for Windows
Suggested Retail Price: $159.97
Manufacturer: Signal Intelligence
Telephone:
URL:

Supports: Radio Shack PRO 2004/5/6 equipped with an Optoelectronics OS456, Radio Shack PRO-2035/42 with an Optoelectronics OS535, , R7000, R7100, R9000, AR3000, AR3000A, AR8000 with interface.

System Requirements: IBM PC or compatible (386 or faster) with 4 MB RAM running Windows 3.1, Windows for Workgroups 3.11 or Windows 95,.

Features:

Operate up to ten radios at one time

-- Combine groups, banks and search ranges and scan at once
-- Mini-status monitor
-- Spectrum analysis display
-- Scan by carrier squelch, sound squelch, PL/DPL code or signal strength,
-- Search and store mode finds frequencies and builds new groups,
-- Log activity to disk or printer,
-- Use any serial port, even COM3/4 when COM1/2 in use,
-- Import and export data in other formats,
-- All scanning parameters selectable on a per-channel basis.

Product: Radio Manager for Windows 2.0
Price: $30
Manufacturer:
Address:
Telephone
Email:
URL:

Supports: Icom R-7000, OptoScan456

System Requirements: 80386 and higher IBM PC and Compatibles with 4MB RAM, Windows 3.1 or Higher (running in Standard or Enhanced Mode); a hard disk with 2MB free disk space.

Feature Highlights:

-- Each channel has a class and service description
-- User defined banks and channels (as many as 998001 channels!)
-- User defined Delays and Priority Intervals
-- Lock-out individual channels or entire banks
-- Lock-out Review shows individual channels that are locked-out
-- Unlimited number of search ranges and bank files
-- 5 Preset buttons for easy access to favorite channels
-- Scan and Search up and down
-- Select Delays for individual channels

-- History Window shows last 999 active frequencies
-- Look Up feature displays information on known frequencies
-- On-line Help
-- Number of files only limited by free disk space

Product: Scan*Star for Windows Plus
Price: $159.97
Manufacturer: Signal Intelligence
Address:
Telephone
E-mail
URL

Supports: AOR AR3000, AOR AR3000A, AOR AR8000, Icom R7000, Icom R7100, Icom R9000, Radio Shack PRO-2005 and PRO-2006 with OS456; Radio Shack PRO-2035 and PRO-2042 with OS535 installed in Radio Shack PRO-2035.

Product: * Scan*Star Professional Edition
Price: S79.97
Manufacturer: Signal Intelligence
Address:
Telephone
E-mail
URL

System Requirements: 386 or better PC with 2 MB RAM, hard disk, EGA, VGA or MONO display. DOS V5 or V6 loaded high or OS/2 V3 (Warp). Serial ports required for adios and tone readers. Some radios require RS-232 to TTL converters. Operation in DOS prompt under Windows not supported. Any serial port can be used, including COM3 or COM4 when COM1 or COM2 already in use.

Scan*Star Professional Edition Information

-- Spectrum analysis on OS456, R7100, R9000, AR3000
-- Scan by tone with OS456 or DC440 and another radio.
-- Scan multiple groups, banks and ranges at the same time.
-- Four level alarm system for priority channels.
-- Channel and bank organization limited only by PC memory.
-- Comprehensive report printing & data logging.
-- Import & export data.
-- Upload & download radio memory.
-- Terminal window for TNC, decoder or modem.
-- Monitoring assistant for logging while "tuning around".
-- Background scanning.

Product: * Scan*Star Commercial Edition
Price: S129.97
Manufacturer: Signal Intelligence
Address:
Telephone
E-mail
URL

System Requirements: IBM PC 386 or better with 4 MB RAM, hard disk, VGA or SVGA display. DOS 5 or 6 loaded high or OS/2 V3 (Warp). Serial ports required for radios and tone readers. Operation in the MS-DOS prompt under Windows not supported. Any serial port can be used, including COM3 or COM4, even if COM1 or COM2 already in use.

Feature Highlights:

-- Multi-radio scanning, search/slave and peer strategies.
-- Scan 4 radios at once!
-- 32 bit code for max performance on new processors.
-- SVGA support, 800x600 and 1024x768 resolutions.
-- CI-V port sharing minimizes serial port requirements.
-- Improved terminal window with modem, dialing & macros.
-- Radio detail recording for channel usage analysis.
-- Spectrum analysis on OS456, R7100, R9000, AR3000
-- Scan by tone with OS456 or DC440 and another radio.
-- Scan multiple groups, banks and ranges at the same time.
-- Four level alarm system for priority channels.
-- Channel and bank organization limited only by PC memory.
-- Comprehensive report printing & data logging.
-- Import & export data.
-- Upload & download radio memory.
-- Terminal window for TNC, decoder or modem.
-- Monitoring assistant for logging
-- Background scanning.

Signal Intelligence offers three products for use with Microsoft Windows: The SE edition, the Plus edition and the Industrial edition. All editions feature a common set of features, and are upward compatible.

Product: Scan*Star for Windows SE -
Price: $99.97
Manufacturer: Signal Intelligence
Address:
Telephone
E-mail
URL

Requirements: IBM PC or compatible, 386/486/586 running Windows 3.1, Windows for Workgroups 3.11 or Windows 95. VGA display, mouse and hard disk. Minimum system 4 MB RAM (8 MB RAM recommended). Serial port(s) required for radio device(s). Disk space to install: under 3 megabytes, disk space
requirements for logging are a function of sampling rate, number of channels and activity, and can be substantial.

Scan*Star SE for Windows Features (Also Plus and Industrial Editions)

The SE edition is an entry level package, and is priced to be competitive with other Windows based scanning products. Users with only one radio and modest requirements should consider the SE edition. The SE edition has the following features:

-- Combine groups, banks and search ranges and scan at once,
-- Full featured radio data manager,
-- PL/DPL and DTMF logging with OS456, OS535 or DC440 and any other radio,
-- Mini-status monitor
-- Spectrum analysis
-- Scan by carrier squelch, sound squelch, PL/DPL code or signal strength,
-- Search and store mode finds frequencies and builds new groups,
-- Log activity to disk or printer
-- Use any serial port, even COM3/4 when COM1/2 in use
-- Import and export data in other formats
-- AR8000 unlock and band plan editor

Scan*Star Plus for Windows Features (Also Industrial Edition)

The Plus edition of Scan*Star for Windows has all SE features, and adds the following:

-- Operate up to ten radios at one time,
-- Monitoring Assistant for spectrum browsing,
-- User defined database fields with Dbase field associations,
-- Spectrum analysis
-- Sub list scanning for trunk groups, duplex channels or frequency hopping.

>mom, etc., do any jail time? Didn't think sooo...And no they DID NOT
>HAVE A WARRANT TO WIRE TAP HIS CELLPHONE! If they did that evidence
>WOULD have been admitted into evidence.
>
>

I have never seen any proof that the cops RECORDED the call, only the assertion (which I believe) that they used the Cell system to find and track him. I don't think this would be covered by ECPA. This might be related to a pen register setup for cell phones, and I am uncertain how ECPA treats Pen Registers.

On top of that, they wouldn't need a warrant if the other party to the call, ok'd it. Also, since flight from prosecution is an offense allowed (to be intercepted) by ECPA, then they probably thought they could get a judge to issue the warrant after the fact. They've got 48 hours to do this.

Ofcourse, if it was illegal, it might be why we didn't hear a peep about OJ's ride during the criminal trial.
cheers

Bullshit. The call was made TO THE POLICE, and they can legally tape
any call to which they are a party, whether they have the consent of
the other party or not.

2403. Re: PRO 2006 OR 9000XLT Wich one would buy?

Newsgroup: rec.radio.scanner

Source record: 210826

Only a user-modified Pro-2006 can directly tune cellular frequencies.

From what I'm told, the 9000 does a pretty good job of receiving cell freqs. in the 365 to 400 range when used with a wide-band antenna. Because my antenna is cut for milair I only hear the occasional cell call breaking through, and then only when they are closeby.

They can't tape the calls that he made to his mother and friends!

I think the tape that he is referring to was made by a scanner
listener that leaked it to the press. The only thing that the
LAPD did was track down the location of the phone.

2405. Looking for N.J.

2406. Directional antennas for the 800-900MHz public service band

Newsgroup: rec.radio.scanner
Date: 1997-01-20 00:00:00 UTC
From: innovative_technologies@actcom.co.il.NOSPAM
Message-ID: <E4BBBs.9y6@nonexistent.com>
Source record: 210829
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.antenna,sci.electronics.design

Hello,

This post might be resemble a previous posting, but is intended to pinpoint our problem: We need a small, low cost, directional (not necesserily with gain, just good front to back/side ratio) antenna for the 800-900MHz public service band. We would like to integrate it on the main board of our system to lower costs and lower dependance on external suppliers, as well as keep size small, and that is why we would like to etch it directly on our PCB. Can anyone give a pointer to such a small, low cost commercially available antenna, or better yet, a PCB layout or general guidelines for such a design?
Thank's all for any help offered.

When responding, please email directly in addition to posting here, since our newsserver isn't very up-to-date. Please note that you must edit the reply email address (remove the .NOSPAM postfix). This has been done in an attempt to reduce the amount of junk mail received here from automatic mailers. Thank you.

regards,
inno

>The roofing material is asphalt shingles over plywood.

bob,
It should be better because you're improving your line of sight.I
also have the radio shack discone,but I mounted it atop two 10'
interconnected steel poles and mounted it to the chimney.No guy wires
needed.If you have a chimney all you need is the two poles and two
chimney straps.Try to use one cable,that is ,if you need >50ft. use
100' cable rather than two 50 footers with a connection in the
middle.Also as an added precaution I ran electricalwire(regular
3-strand house wire) from the poles to a 4 foot section of copper
tubing buried (actually driven with a sledgehammer)into the ground as
sort of a lightning rod.I'm in western suffolk and I reach manhattan
with no problem.(40-50miles).Post your progress.
good luck
-bob-

How does one receive SCA on a scanner?

2411. Cellular phone/OJ

Newsgroup: rec.radio.scanner
Date: 1997-01-20 00:00:00 UTC
From: tosca@cts.com
Message-ID: <32E3DBCA.62B5@cts.com>
Source record: 210834

If you can remember back to the OJ fiasco, there was a "leaked" recording of OJ's cell phone calls to his mother among other people, that was recorded by LAPD w/ their fancy smancy cellular detection equipment. This was done without the benefit of a warrant. This "evidence" was of course never admitted into evidence at trial because it was gotten illegally. My question is this: Did those asshole cops who broke the ECPA do any jail time? Were they indicted? Were they arrested? Of course not. But it is curious that after the OJ arrest, and all of the bullshit that the defense was digging up at trial, Dutch Boy (Van Atter), and the Nazi (Fuhrman) both decided that NOW would be an excellent time to retire. Curious isn't it? Do you think they were worried about losing their pensions over ALL the bullshit they pulled including monitoring the cell phone calls?

And if you do not think that most police departments do not have the equipment to monitor cell phone calls check out the following web page at:(www.law-enforcement.com)

I would welcome any intelligent comments. AOL'ers need not respond.

I believe the only difference between it and the 760 is the addition of another circuit board inside. 100 channels probably won't be enough to monitor most 800MHz activities, I reckon.

>
> Why not buy it from a dealer who has a 30 day return?
This goes for anyone not sure of a scanner.

FOr instance: i did just that with the new radio shack scanner, the 1000 channel model. Four days later I took it back. Just a piece of junk. My BC 210xlt is more sensitive and gets more ranges than the new 1000 channel model.

Always deal with dealers who have this 30 day return....this way get to discover the bad things right away....it's like with Circuit City and Good Guys....who have this 30 day return on their sold stuff.

All you need is a Bank Card and a bit of time.

Grove Enterprises and Scanner World has a 30 day return too. Plus you save money. That other company i was thinking of is Ace Commu nications...see Monitoring Times for their ads. That makes three good companies to deal with in mail order.

The LAPD, which until late 1992 was one of the finest law enforcement agencies in the world, had plenty of reasons to believe that OJ had murdered 2 people. That means that their interception of his cell phone conversations were not illegal.

I was not talking about the call to the police, but the call to his
mother. Furthermore, Marcia Cunt never tried to admit that tape into
evidence, otherwise it would have come up in the 1538.5 motion at the
prelim. Nuf' said asshole?

Has anyone monitored anything on the Cosby homocide investigation (other than the media.)

I heard some detectives rolling code from San Gabriel to LA on Friday night talking on 506.3125, but I think they may have been bomb squad units.

Any hints on frequencies?

Al> Phil

I sold automotive (and other) merchandise for over 40 years and the
things that sold quickly were underpriced and the things that moved
slowly were overpriced. I would say several days would be "fairly easily"
but "in under 10 hours" would be very easily. I priced a used Harley
45 cid racer at $225 once and everyone asked me what was wrong with
it that it was so cheap, so I upped it to $275 and let myself be
dickered down to $250 and we were both happy. (He broke his arm by
running off the road while adjusting the carb a week later.)

The LAPD never taped the calls that OJ made to his mother! They taped
the 911 calls made during the Bronco Chase. They also had the cell
phone company track down the location of the phone.

I agree!

The LAPD would NOT have taped the cell phone calls that OJ made to
his mother! They only taped the calls that were made to their 911
system during the Bronco Chase.

The reports that I remember hearing, indicated that they had the
cell phone company track the location of OJ's cell phone.

What immunity? I have never heard the Martins or their lawyer mention
this. The Martins claim to have been acting out of a sense of being
good citizens. They say that they now know that they might have broken
the law and are liable to be prosecuted.

These claims that there was discussion of immunity appear to be just some
right-wing fantasy(lies) that are intended to inflame the gullible.

Oh ok. Is that reasonable suspcion or probable cause?

Have you read the Bill of Rights? Have you heard about the Fourth
Amendment? Did you drop out of high school before you sat through 10th
grade civics? Are you THAT FUCKING STUPID? Oh, I forgot, have you EVER
done criminal defense work at the trial or appellate level? State
supreme court? Federal court? Federal appeals court? Didn't think so...

Did you pay somebody to take your GED for you in jail? How many packs of
smokes did that cost you?

Get the fuck out of this newsgroup. I have spent WAY to many years in
school to read your ignorant prattling...

2431. Re: AOR AR2700 Question

Newsgroup: rec.radio.scanner
Date: 1997-01-20 00:00:00 UTC

-=> Quoting pkhart@erols.com to All <=-

pk> From: pkhart@erols.com

pk> Has anyone else run across this problem (bug?) with the 2700?

Hi Paul,

pk> If I set up a search bank with, say, a lower limit of 50.010 MHz and
pk> an upper limit of 51.010 MHz, and use a step size of 20KHz (0.020 MHz),
pk> the scanner will actually start at 50.020 MHz and only go to 51.000
pk> MHz, giving me the even freqs (.020, .040, ...). The only way to get
pk> the odd (.010, .030, ...) channels is to use the same limits and a step
pk> size of 10 KHz, which gives me both even and odd (.010, .020, .030,
pk> ...)! Frustrating!

Clear, try to find out of there is a "Ofset" button on the scanner, it will
solve the problem. It does exactly what you described above. But an upper-
limit is an upperlimit, so the last freq. probably will be left over.
Then you can set the upperlimit to 51.010. It will work, you'll see.

If the AOR-2700 works the same as the -8000, you do the following.
Push VFO 1-2, set first freq to 50.010, push (func) (2) to initiate
freq.step-menu, push (pass) and there's (at the right of the word 'step')
"offset". Turn dialknob to set 20 Khz-step in display.

pk> Does anyone else have this problem? Is there a trick to fix this
pk> problem?

Hope this helpes....

I'm sure you're right - after all, it does have a tunable front-end;
the user can't adjust the tuning - it "sweeps." My explanation was limited
to the Scout, which is an untuned device. Since the poser of the question
asked about both, I suppose both our explanations may help him out.

If anything it's understated. The "Florida couple" are very active in
the Democratic party. Intercepting the cell call was no accident.

What I want to know who actually did the intercept and what equipment
they used to do it.

I wish you'd quit spouting that clueless bullcrap. There are a lot of reasons why a judge will exclude evidence. Whether it was obtained legally or not is just one consideration, and legally obtained evidence can be excluded for other Constitutional or procedural reasons. Besides, OJ's phone was not "tapped" when he called the police himself and they recorded the call.

For sale: Radio Shack PRO-39 handheld scanner.

Covers: 30-54, 108-174, 380-512, 806-960 MHz (no cellphone "gap").

Scan speed is 25 channels/second. Scans frequency ranges at 50
frequencies/second. There are 200 memories in 10 banks of 20.

Scanner includes rechargeable ni-cad batteries. It charges
batteries while inside the scanner. One charge is good for a few
weeks of use.

Scanner is in excellent condition. No dents, dings or scratches.
Includes:
- original rubber duckie antenna.
- original owners manual.
- six nicad AA cells.
- homemade leather case.

$175 shipped to lower 48. Call Jim at 716-381-3102 (home before 10)
or 716-654-2487 (work).

Might just happen. The Constitution blatently protects posessing
weapons, but Clinton & Co. are out to eliminate them. And there's no
constitutional right to scanners...

2445. OJ/cell phone

Newsgroup: rec.radio.scanner
Date: 1997-01-20 00:00:00 UTC
From: tosca@cts.com
Message-ID: <32E4074C.684A@cts.com>
Source record: 210868

If you had read the case law, you would understand the reasoning behind the allowance of pen registers. Pen registers are allowed because you give out the numbers you dial to the phone company for billing purposes. You do not give out your conversations.

Furthermore, fleeing from law enforcement is NOT AN EXCEPTION TO THE WARRANT REQUIREMENT FOR CELLPHONES. Nor, is one party agreeing to have the conversation recorded. Did OJ's mom agree for the call to be recorded? Of course not. And lastly, you DO NOT GET A WARRANT "AFTER THE FACT". That is why you have a warrant process. You go to a judge or magistrate and show him/her your probable cause BEFORE a search or interception to get a warrant. Not the other way around, such as the "See I told he was he was guilty" Moreover, less that 1000 warrants are issued each year to tap telephones in the United States.

Finally, I understand you are somewhat retarded since you are on AOL, however I will say this: Before you start talking out your ass, you might want to consider going to law school and taking constitutional law. You get that during your second year, if you could make it that far.

Hello all,

I have an opportunity to get a BC9000XLT. I am a bit new to scanning and have a few questions. I am reading through the FAQ as well.

The questions I have regarding the BC9000XLT is :

Is it a good all around scanner? What can I expect to pick up with this unit ?

Can it be modified to pick up cell ? From what I understand, most all of the new scanners can not pick up cell. Are there any mods for this unit?

Have there been any problems with the unit loosing the saved selections?

Sorry for the questions but I would like to be prepared and know what I am getting before I buy it.

Please reply via private email.

Regards,

Hi there,

I have a Dutch Scanner page on the web, but my provider is cutting me off, because i am too successful. I have many Dutch and foreign visitors on my web site. The visit me because they are looking for frequencies, software, news and info about their hobby.

Next week i am starting a domain for this scanning site. Maybe you want to sponsor me and advertise in a very direct way to your future customers.

Send me an email if you want info on the very reasonable prices,

Jan

I don't have the manual you need but perhaps I can help.
Radio Shack can order owners manuals and service manuals if
you do your own repairs.

Like sears you need all the numbers. ie mod# PRO-34 stock# 20-135
your numbers will be different. It has been awhile since I've ordered
but I don't remember the prices being out of line.

The Pro-60, 62, 26, 51, 29, 66, and 25 all have 800MHz capability.
The Pro-60 and Pro-62 are both superb HH's with wide coverage (up to
999.9875 and 960MHz, respectively) AND triple-conversion.
(Un)fortunately, RadioShack has discontinued both of these models just
recently... they are both selling for something like $100 off regular
retail.

>>...[the] Uniden BC890XLT...is worthless in a metro area that
>> uses 856-857 Mhz for its Fire Department freqs. This scanner
>> is very prone it cellular imaging and intermods.

I respect the heck out of folks like Bob Parnass and others who share with us first-hand/on-hands information about equipment here.

But I bought a BC890XLT back in late 1994. And the damned thing works perfectly for me here in Riverside, CA - a rather large "metro" area. I have no intermod problems...nor any imaging problems...and I have programmed it with frequencies in about every band there is.

Yes - I have seen one perform weirdly in Anaheim, California. But there is so much microwave-like activity shooting across that region that I have problems with my 440mHz HT, too.

I dunno...you and Bob "blast" the merits of the BC890XLT. Yet I haven't regretted my purchase of one.

I guess the bottom line is: do your homework and know what you want as far as scanner performance is concerned. Join a scanner organization or Amateur club for further first-hand information.

Gaps in 800MHz band for cellular freq's are required by Federal law. New scanners cannot pick up those frequencies and in fact are designed so as to be nearly impossible for the average Joe to modify to pick them up. The same law also makes it illegal to monitor cordless phone calls

Hi Robert,

On Sun, 19 Jan 1997 ,
in the newsgroup rec.radio.scanner,
"Robert H. Eisner" <rheisner@worldnet.att.net>
from AT&T WorldNet Service thoughtfully posted:

> these were actually second generation cordless phones! The first
> generation cordless phones (pre 1980), used 26.995 Mhz (FM mode)
> for the Base Unit and 49.860 Mhz for the Handset. They were
> manufactured by a company call "Mura".

You are correct...and I stand corrected....Make that the "second
generation" of cordless phones used 46/49MHz.

I remember seeing those Mura phones in Popular Electronics long
ago (sold by JS&A - The "BoneFone" folks). They even LOOKED like
CB walkie-talkies!

For "s#!ts and giggles", I dug through a few old issues of
Popular Electronics and Radio Electronics of that era. The July
1981 edition of Radio Electronics had a review of the various
cordless phones available at the time. They even included a
schematic and circuit level description of one of the phones!
Although they never mentioned anything about sound quality...

(If anyone is interested in the article, please see your local
public library - it is quite a few pages).

Cheers,

we (USA) have the best government MONEY can buy...you don't like something...pay a lobbyist to pester lawmakers on both the state and federal level to make what you don't like illegal...also give plenty of $$$ to a Congressman's or Senator's campaign fund..you effectively buy him...they are for sale to the highest bidder...

Yes, the cellular Phone lobby bought the US congress and got a law passed so they could sell their phones as being Private..which they most Certainly are not....I listen to Cell calls on occasion (Scan 869-896mhz in 10.0 or 12.5khz steps)...can sometimes hear lots of interesting stuff...many people are dumb enough to give out their name, address, and credit card numbers over the air so anyone with fraud in mind has all they need to order stuff posing as them!

Well 9913 is fine- in fact it is what I use- but it is relatively expensive and if he thought RG-8 was too stiff- he would surely think that of 9913! As for the impedance mis-match- scanner-antennas operate over too wide a frequency ranges to stay a flat 50-ohms anyway. Nor are scanners going to be exactly 50-ohms at all frequencies. In-short- the loss caused by impedance mis-match in scanner applications is trivial- and far less than that caused by poor coax, or too many connectors.

An additional advantage of using RG6 is the large selection of inexpensive switches, splitters and amps available for use with "F"-connectors.

The Xplorer is a microprocessor-controlled device which can lock out
individual frequencies (user entry) or a range (cellular at the factory).
It would definiely be possible to lock out FM broadcast, but since this
unit is sold as a test receiver, what would that do to people who buy it
for testing FM broadcast transmitters?

Hi Paul,

I think you meant to say "third generation for the 46/49 Mhz phones.

It could also be forth generation, if you count the 49 Mhz phones
made by Uniden in 1983.

I think the cordless phones came in the following order:

Not sure if some of the earlier dates are correct, it's been
over 17 years!

1st generation 1979 - 1980 Mura Phone 27.995 / 49.860 Mhz
2nd generation 1980 - 1984 All models 1.6 - 1.8 / 49.83 - 49.89 Mhz
3rd generation 1983 - 1984 Uniden Phone 49.830 / 49.890 Mhz
4th generation 1984 - 1995 All models 46 / 49 Mhz
5th generation 1995 = All models 902 - 928 Mhz
6th generation 1995 - All models 43 - 46 / 48 - 49 Mhz

If we are speaking of discone antennas don't worry about cable impedance.
The impedance of discones vary with frequency and is nothing near
50 ohms over the entire range.

Does not this only work when you have an impedeance mismatch? If the VSWR is low (<1.3:1 +/-?) there is no reason to use antenna feed lines that are in multiples of half wave lengths, besides is not this method normally used in Tx work not in Rx work? If the VSWR is really that bad you need to get a better antenna system.

2483. Good Scanner For Under $500

Newsgroup: rec.radio.scanner
Date: 1997-01-20 00:00:00 UTC
From: Buzz.Payne@ColumbiaSC.NCR.COM
Message-ID: <5c01tk$qj5@news.cps.udayton.edu>
Source record: 210956

Hello, I am somewhat new to scanning and I would like to get as much scanner as I can for under $500. Right now I am leaning towards the Uniden 9000XLT priced at about $389. Being new I have a few questions, if any one can answer any or all of these I would me most gratefull.

1. Is the 9000XLT a good choice / price?

2. Are there and scanners available in this price range with an RS232 serial interface ?

3. Are there any new models on the way in the near future that would make me regrett my choice?

4. Finally are the scanners from AOR and ICOM really that much better to justify a $2000 price tag?

Thank's in advance for any help.

If I recall, the IC-R10's squelch knob becomes an RF gain control
when receiving USB, LSB, and CW. Ergo, I don't think you'll
be scanning those types of signals in the conventional sense.

The freq coverage and features are very different, with the upper
hand going the the BC9000XLT. The IFs are different and the
construction is radically different. Full PRO-2045 review is in
Feb. 1997 Monitoring Times, due out next week.

You can directly input one frequency on a PRO-51 as follows:

Turn squelch down
Press Manual
Key in desired frequency
Press Up- or Down-arrow
Monitor

In America, we "advise" politicians continuously/constantly.

Trouble is, they never seem to take their constituent's advice!

Is GB similar?

Just moved into a new house and wanted to setup my scanner.
Bought the Radio Shack discone antenna for $60 plus 50' of cable.

My TV antenna is in the attic and we get good reception so I thought
maybe I could mount the scanner antenna there also.

The reception has improved over the simple plug-in-the-back model but
I'm wondering how much better would it be if I placed it outside?

The roofing material is asphalt shingles over plywood.

Paraphrasing Forrest Gump, "scanners are like a box of
chocolates, you never know what you're going to get..."

I own 3 Electra/Bearcat BC300s and have repaired several
more. Depending on which schematics you have, you can see
that Electra changed over 100 components from the earliest
to the later BC300s. Ironic that the later BC300s were
more prone to failed CPUs.

My PRO-2004 has worked without fail since I bought it new.
Yet, other PRO-2004s fell prey to poor solder joints
associated with a production run.

Most consumers wouldn't be aware of the changes and the
manufacturers aren't free with the information.

Environment plays a role, too. I've had few (if any)
intermod and image problems with the PRO-2004. John Moore
lived 15 miles from a channel 21 television station. The TV
signal mixed with the 2nd LO and got into the PRO-2004's
IF, producing birdies every 2 MHz. Paul Bame reported
the same trouble.

Something similar happened to me when I tested a BC890XLT
and a PRO-2036.

It's a good idea to buy scanners from vendors with a
liberal return policy, e.g., without a restocking fee.
Test the heck out of your new scanner during the first week
of ownership and return it if it proves unworthy.

Les:

I have the Radio Shack PRS-101. It seems to work fairly well, however the build quality isn't too good. It doesn't have pl tone capabilitys either and won't work repeater offsets. I didn't need these features, and paid less then $100.00 for a used one so I went with it.

I looked at the Radio Shack PRS-102(Motorola) It looks pretty good. I don't think it will do repeater offsets, and the pl tone is an optional accessory. I think it runs about $40.00 for pl capabilitys. The build quality for this radio looks to very good though.

Bottom Line:
If I were buying a new unit then I would definitely get the Maxon 210+3. (I am thinking of getting one myself!) If you can find the PRS-101 used and dont need tone/repeater capabilitys its a good buy only if you don't pay more than $100.00.

Just my 2 cents!

Mobile scanners are only illegal in NY when they are used in a vehicle operated
on a public roadway- See Section 397 of the NYS Vehicle & traffic Law.

Also , hand held scanners can be illegal if used in conjunction with other

contraband in the commission of a crime such as Burglary(Burglar's tools.

As a volunteer firefighter, you can obtain a "BLUE CARD" from Department which
allows the use of a mobile scanner in your vehicle provided you monitor only
the frequencies your are authorized. I have seen many occasions where
police have seized scanners because they were programmed to the police channels

Hope this helps!

About that frequency you were hearing only one side -you were on the window frequency -my estimated guess is try 35.0200 MHz. There is a McDonald's In Amelia County, Virginia and the frequencies are 35.020 (Customer) and 154.600 (Window). I have a BC200xlt that I connect to my car's radio antenna with a Motorola-to-BNC connector. The Motorola connector is standard among car stereos which are factory installed. I have a Mercury Topaz. It picks up real good on LOW band VHF (30-54 MHz)

I wonder if this has happened to anyone and why. I can take a frequency and put it in one scanner, a base unit on an outside antenna, and hear the campus police of the the local university. Take the same frequency and put it in a different scanner, my handheld with the stock, standard antenna, and hear the police. This is not a shared frequency, because the local police and campus police are not talking to each other. They are talking to their respective base's. It is not bleed over from another frequency. I've tried that theory and nothing. It's not a bother, just curious what causes it. Thanks for your help.

Scanners are not "contraband" in New York State. Contraband can be
confiscated and destroyed. Scanners must be returned in their
original condition.

>As a volunteer firefighter, you can obtain a "BLUE CARD" from Department

>wavelength the loss factor is always going to be the same.

Yep, that's true, loss per foot stays the same or, the longer the coax
the higher the loss. I think this myth started with an ill-informed
CB 'er back in the 60's. It is true that the SWR measured at the
transmitter in a poorly matched transmitting antenna system can appear
to be changed by adjusting the length of the coax. The key word here
is APPEAR. The only way to actually reduce the SWR is to match the
antenna to the coax.

A high SWR can cause damage to the final of a transmitter but in a
receiving antenna the SWR becomes very insignificant. Generally the
loss in the coax is far more significant than the SWR when you're
talking about just receiving. When you're talking about one antenna
system to cover the range of 30Mhz to 2Ghz it would be impossible to
have the coax be a multiple of 1/2 wavelength at every frequency you
might want to listen to anyway, so just keep the coax as short as
possible to reduce losses.

>
>3. RG-58 loss per 100 feet is as follows: 3.2db @ 50mHz, 6.4db @ 200mHz,
>9.0db @ 400mHz, and 14.5db @ 1000mHz.

These loss figures look about right, I didn't look them up. If you do
much listening at UHF and above the loss characteristics of RG-58
become horrible if you are using any length of it.

Instead of RG-58 you could use RG-8X, RG-8, or 9914, given in order of
decreasing loss and increasing cost. Also foam dielectric has lower
loss than solid dielectric. In other words RG-58 with foam dielectric
is almost as good (loss wise) as RG-8 with solid dielectric, and RG-8
foam is better than RG-8 solid and so on. As far as I know RG-8X and
9914 are only available with foam dielectric while RG-58 and RG-8 are
available with both solid and foam. The loss numbers given earlier
look like they are for RG-58 with solid dielectric. Foam dielectric
melts at a lower temperature than solid dielectric so if you install
your own connectors you need to be a little more careful when working

with (soldering) foam.

If you just have to have that 200 foot run of RG-58 to get your
antenna up above the trees, or whatever, one solution is a mast
mounted pre amp. Mount it as close as you can to the antenna and try
to find one that has enough gain to overcome the loss in the coax
between the pre amp and the receiver.

The Pro-2006 was discontinued three years ago. It had been in production for about four years at the time.

I've never had much luck with the Pro-2006, but many other folks swear by them. I LOVE my BC-9000XLT and wouldn't trade it for a dozen Pro-2006s.

If you live in a strong signal area the 2006 may be the better choice, as it is not as susceptible to images and intermod as the 9000 is. If you live in an outlying area, or want to monitor obscure services such as marine/Coast Guard or military aircraft, then you'll probably be better off with the Uniden due to its greater sensitivity to weak signals.

The 9000 does have a lot of nice features that are lacking on the 2006, such as channel programmable attenuator, intelligent auto-store, alpha readout etc.

Hi, over there!
I've actually been posting several articles to this and other newsgroups
to get exactly what you are offering.
I'm desperately looking for hi (or low,really) alt charts covering areas
that are covered by HF-transmission, e.g ocean areas and African, Middle
and Far East and Pacific areas.So if you have any of these areas
covered, please mail me.

I'm looking forward to hearing from you!!

Regards, Tore

>9.0db @ 400mHz, and 14.5db @ 1000mHz.
>
These figures are probably accurate for the specific type of RG 58 that
"Sparks" referenced, but it should be pointed out that there are many
different specs/types of RG 58... for example, solid center conductor,
stranded center conductor, poly-ethylene dielectric, foam, various percentages
of shielding coverage, and all have differing loss specs.

>4. Every 3db loss cuts the signal strength in half.

This is incorrect. Every 6 dB of loss cuts the signal in half. It is
easy to confuse the two dB formula's, one for power and one for volts.
Receiver signals are measured in microvolts.

> >
> > Are any current RS models Uniden products?
> >
> > Thanks....

You are correct, in that Uniden does make many of the current and former
scanners in Radio Shack's lineup. One of the earliest(I belive) was the
PRO-35, that was really a BC200 with a flat-grey color scheme. The
PRO-26 is a close clone to the BC3000, the PRO-2036 is nearly the sanme
as a BC890 and the new PRO-2045 is nearly the same same as a BC9000. The
real interesting part, that many don't notice or fully understnd, is how
many of these closely related scanners vary not in just subtle
ergomonic/feature differences, but may also have slight internal
circuitry differences. Usually the scanner with the edge,however slight
is the Uniden. Beyond debating all day about the advantages of scanners
that use AA batteries over Nicad packs, compare the PRO-51 against the
BC220XLT.Both have the SAME receiver, which has search lockouts, a
Police freq Service search and a Data Skip? The BC220 does. Now look at
the PRO-26 and the BC3000, programming differences aside, the two have
nearly the same reciever design, with a slight difference in the RF

frontend.Tests show the BC3000 is more sensitive on UHF and 800 MHz, and because, I suspect, it uses a PC board that incorperates an extra layer of shielding, the BC3000 picks up fewer birdies below 150 MHz than the PRO-26 does. Some can argue that these differences are customer/cost driven, but I suspect that the company that holds the patents, holds the control over what features will and won't be available in products with someone else's name on it. There are a number of similar examples that I could give in this seemingly lopsided relationship.The simple fact is that I have yet to see an example of two products, both designed by Uniden, one with their name on it and the other with Radio Shack's name on it and have the Radio Shack version be technically/feature superior.Uniden makes out well here in that they get a much wider sales outlet network for their products.

The county sherrif and most major cities like Mount Dora and Eustis are on 155 MHz. Fire is somewhere on 154, 154.385 (*I think*). Just search 154-156 and you will find them. Lake and Polk counties are some of the few
counties left in FL that are still on VHF, untrunked and in the clear.

Get the 43 if you can find one. I own both the 34 & the 43. The 34 can be an aggravating radio. There have been a few times when I've come close to "flight testing" my 34. Except for the smaller display, the 43 is a far superior radio.

Subject: pro46mod
Content-Length: 2997
Status: OR

Product: Realistic PRO-46 by Radio Shack
Purpose: Restoration of full 800 Mhz coverage

The modification of this unit is from the May, 1993 issue of
Monitoring Times, published by Grove Enterprises.

** Disclaimer: All modifications are done at your own risk. This
product uses surface mount components which can be easily damaged.
Do not perform this modification if you are not experienced with
this type of circuitry. This will void the warranty of your
scanner.

** Listening to certain portions of the 800 Mhz band is prohibitted
by United States law.

Modification of PRO-46 for full 800 Mhz coverage with 30 Khz stepping
available.

1. Remove the battery pack, battery door and antenna.
2. Remove the four black screws from the back of the radio, then push upward on the bottom of the rear of the case, carefully swinging it upward and removing it.
3. Carefully insert a small screwdriver between the two boards next to the interconnect plug in the lower right corner. Gently pry the top board up to separate it and set it aside.
4. Unsolder the copper-coated plastic shield from the microprocessor
and set it aside. ** CAUTION!! Too much heat will damage the shield. **
5. Locate the two chip jumpers imprinted with "0". Carefully unsolder
and remove both.
6. Solder one chip jumper across the two upper most unused solder pads. (Soldering a jumper across the lower two pads changes the 30-50 Mhz band to 68-88 Mhz.)
7. Reverse steps 1-4. The modification is completed.

n> > As long as it doesn't involve trespassing,
n> > or copywrite violations...

Bullshit. It's a matter of law. The LAW says you can not intercept (listen to) a cellphone OR a cordless phone call. It ALSO says you can not TAPE such a call (since you can't BE listening inb the first place), AND you can not divulge what you heard (illegally).

... Age is only important if you're a cheese.

You don't mention if the "books" indicate which, if either, is
supposed to be on that frequency. Assuming only one is, than you're
getting intermod or images of the other, and it's probably happening
on your base unit, presuming it's recieving much higher signal
strength and is also more sensitive.

If the community is smaller, it's possible they're both on that
frequency, and useing PL equiped radios.

Mark

The truth as I perceive it to be.
Your perception will be different.

2536. Display Light Mod

Source record: 210682
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have a RS PRO 25 and I use it almost every where I go. I have a nice set up in the car for it. But at night it is impossible to see what freq it is picking up and I could kill myself trying to get to the light button everytime it gets a freq or voice I don't recognize.

What I want to know if anyone thinks it would be possible to design a mod for this radio to cause the LCD backlight to come on everytime that a carrier is detected. The normal light switch is time delayed so if you just tapped into that circuit the light should shut itself off if it goes a few seconds without a signal. I think that it should be possible to do in theory, but my knowledge of the inside of these radios is pretty small. Even if someone knew the mod I would probably have my local electricion do it. If it is not too hard I could pull it off, but I expect it would take some work.

Well, anyone with ideas, let me know.

Thanks,
Dave

Does anyone have the 10 codes for police departments, especially
Phoenix? They also use numbers like 101?, etc. What do they mean?
I'm new to scanning out here and alot of the codes are new to me.

Please email response. Thanks.

: Is this typical? Inquiring minds want to know!

i've seen a GRE converter for handheld run just as good as
another 800-capable scanner running right next to it- worked
very nicely actually... 800 Mhz can be a really
flaky thing to pick up depending on your area, etc. anyways.

In a word FILTERS
Start with a tracking RF filter in the front end, follow with a beautifully quiet wide dynamic range balanced mixer, then filter the output. All oscillators followed with filters, buffer amplifiers and more filters.
Look inside a hobby/consumer receiver and you will likely see a circuit board and metal shields over critical portions.
Look in a professional receiver and you will probably see no electronics, just a bunch of metal boxes connected by screened wires or co-ax.
All of this is to ensure that each circuit (amplifier, oscillator, mixer, synthesizer, etc.) gets only the desired signal in and lets only the desired signal out.
I have a pair of Eddystone receivers and a Plessy - all older generation

stuff. The two Eddystones sit on top of each other and neither one can hear the others oscillators, even when sharing a common antenna. That is filtering. Try it with a hobby/consumer pair, or better still a pair of hobby/consumer scanners and see them lock up on each others oscillators.
If extraneous signals can get out, junk can also get in. Any undesired signal is by definition *noise*.
I also have a pair of Kenwoods, and a Lowe HF-150 (Beautiful little box, I love it) but for clean signals in a quiet background there is no comparison, especially if there is a blockbuster signal on the adjacent channel.
They don't look so pretty, they weigh a *lot* more, but they do perform.
I have not kept up-to-date on the professional receiver market for ten years or so and am a little out-of-date; but I seem to remember that Raytheon used to sell a general coverage receiver for about $100,000 U.S. - that was the basic version without any options. I have no idea what the current absolute top-of-the-line receiver is, but I am sure I cannot afford it.
Regards,
Dave

Everything i've heard about the new Uniden Trunk Tracker indicates that it will handle Motorola SmartNet Type I, II, and IIi systems. It won't handle GE/Ericsson or EF Johnson LTR.

and

Charles Simmont wrote:
>I personally don't think that the Uniden Trunk scanner will be that great >of an improvement over what is already available. I scan 800Mhz systems >with my current scanners with little difficulty.

Some are quite easy to follow with conventional scanners. Jefferson County, Alabama, uses a system that keeps the two parties on the same frequency until both sides of a conversation are finished. However, the Montgomery County Sheriff, State Troopers, and some City of Montgomery (all Alabama) use many of the same frequencies, but have different talkgroups. Trying to listen to only one particular user can't be done. County wide or metro trunked systems can be a royal pain if you only want to listen to one particular agency.

Works for me 486 - 33mhz, 8meg, soundblaster, etc
(Gotta use EMM386 or as Don has Qemm.)
Decoding takes some tweaking but I got it working in the ham
bands on rtty and weather FAX.

Every decoder I have (hardware) really takes tweaking and
experience, I am still evaluating this
software (shareware), but it looks promising.

You used the word "intentional", and it could take on all shades
of court interpertations of the "intent" of Congress. Was it to
ban only intentional scanning and monitoring?

Or does it apply to a cordless phone owner who picks up his phone
to use it, only to accidently discover [and listen to] a neighbor
on the same frequency?

Hi Matt.

I don't know how the Uniden unit will work (others can chime in here) - but speaking from what I've seen here in the states and my time spent on a 'trunking receiver' I don't see a problem.

I've made several postings show both Type I and Type II Moto trunking system data - these may lend some insight.

To 'Trunk Track' It's a matter of 'watching' for the "call group" *of interest* to come across the control channel - along with that "call group" will be a "frequency code". The "call group" code along with the freq code tells the user's radios (in a specific group) 'where to go' to communicate.

It's really 'a piece of cake'.

>Anyone can target a specific phone number and listen to only that
>cell phone, it ain't hard. (monitor the cellular data stream!). and for
>that matter you can also follow a person through cells and channel
>changes (aka freq changes).

Well, I don't put it past either party to attempt to monitor the calls of their political enemies.

However, if they wanted to monitor Newt's calls, wouldn't it make more sense to trail Newt? This couple was in Florida and Newt was in Washington. Newt just happened to call someone in Florida in their vicinity, and that's how they heard Newt's voice. Do you folks really think that the Democrats have people monitoring anybody that Newt, or any other highly-placed Republicans, might possibly ever call? THAT is what sounds unlikely!

I think that the Florida couple were scanner hobbiests that just stumbled upon the call and decided to take advantage of the voice encounter. I keep a small, hand-held tape recorder in my car for note-taking, and I don't doubt that others do too. It's a common tool used by anyone in outside sales or consulting.

If there was indeed an organized plot to record conversations, the group would have surely known that they were breaking the law, and would not have had any names revealed - the tape would have been sent to the newspaper in a plain brown envelope with no return address!

I just can't agree that there was a conspiracy here.

Hi Bob, thanks for the heads up on the differecnes between the PRO-2045 and the BC9000. I had gotten a service manual for the '2045 a couple of months ago, but had not studied it in great detail, beyond noticing the differences in the frontend(preamp/1st mixer). While the dual 1st IFs in the two radios are the same, I was surprised to see that the '2045 converted down to 10.85 MHz for the 2nd IF instead of 58.075 MHz as seen in the '9000(and other similar Unidens). While the two SAW filters in the 1st IF certainly would have good rejection characteristics, I can almost guarantee that converting from 254 or 380 MHz(1st IFs) down all the way to 10.85 is an open invitation to some amount of image problems. Would be interested in knowing if you saw anything of that in looking at the '2045...

The differences in the Local Oscillators looks interesting too. The '2045 seems to use a dual PLL IC, that's cool. Does the 2nd LO in the '2045 remain fixed or does it provide some of the tuning step increments? I also see that the '2045 uses only 2x VCO's for the 1st LO, where the '9000 has x4 VCO's, AND they seem to include some degree of filtering on their outputs. Where as the VCO outputs in the '2045

feed directly into the 1st mixer... We'll have to work some numbers sometime and see if harmonics from the 1st LO could result in any "spurious" reception problems, AKA PRO-2035 getting cellular on 130 MHz,ect.

Although I suspect it's because they "forgot" to include Wide FM in the '2045, I see that it does not include programming accross TV and FM Broadcast freqs. This could posibly be thought of as an advantage(?) in that by avoiding these freqs, you also avoid many possible souces of intermod IE by avoiding the freqs with the mega watt transmitters on them. But at the same time I don't really see any major differences in the various frontend bandpass/reject filters that would support this theory. One past example of this can be found in the intermod rejection differences as seen in the PRO-43 and the old BC2500. Any thoughts on this? Or does it sound too much like the beginnings of an interesting(?) IEEE paper.....no thanks hi hi

I also run ATI Mach64 card. (also QEMM)
My vidio card required the VESA driver.

This card has some strange behaviour with
programs that make VESA calls without the
driver.

Look for 64VBE200.ZIP from ATI. Contained
in this .ZIP is the driver M64BE.COM which
is a DOS TSR.

BTW the program runs in an OS/2 DOS full screen
session (with the tsr installed.)

Question: What is a simple, inexpensive, and convenient way to start this year off in a FUN, intriguing, and romantic fashion?
(Santa must have been holding out on this one!)

Answer: Dateline!

Now that Christmas is over and you have given everyone else presents, it's time to treat yourself to something nice.....that someone special. Someone to share in your hobbies, your interests, your lifestyle, your LIFE.

Dateline is the perfect way to find someone and be found! Dateline gives you the forum to seek out others whom you find interesting, and let others know about you! And the best part is - you are in control of what happens. Call often to leave and receive lots of messages (remember - this service is HUGE and there are so many people from all the area codes across the country calling in to find people just like you!), or call in as little as you like and leave and receive a few selective messages. You can also call just once to see what the heck it is all about. Whether you are a little shy or outgoing in the biggest of ways - it is a simple and inexpensive way to find other singles. It is amazing how much fun people have with Dateline!

It is so convenient! You can call in from anywhere at anytime to give and get your messages. This is a 24 hour service and you just punch in whichever area code you are interested in - whether it is in the place you live or the places you go! And it is really super if you relocate and want to meet up with guys and gals who share your interests and would love to show you around! (No wonder Santa is always so jolly - his sleigh phone has the Dateline speed dialed in!)

1-900-484-7009 ext. 5241

$2.99/min. Must be 18 years or older.

Serv-U (619) 645-8434

Make this your Happy New Year's Resolution: To call Dateline today and start giving and receiving those personal messages! Join in the fun - and don't keep those folks who want to meet you waiting until next Christmas.....

>>easy to confuse the two dB formula's, one for power and one for volts.
>>Receiver signals are measured in microvolts.
>>
>> Ed
>
-----------------------
>Strength refers to power. 3db is correct for working in terms of power.
----------------------
No, in receiver terminology, (signal) strength refers to voltage, as in
microvolts of signal, and a 6dB loss equates to a loss of half voltage.

dB = 20 Log ( volts1 / volts 2)

dB = 10 Log (power1 / power2)

Look the above formulas up in any decent electronic book.
--------------------
>6db is apropriate fwhen working in terms of signal voltage.
---------------------
That's what I said way back above.
--------------------
>Receivers have been rated in terms of voltage. Recently, they have also been
>rated in terms of power. This matches the convention of figuring your signal
>losses in terms of power.
>
---------------------
Nope... receiver sensitivity is never rated in terms of power. You may be
looking at power specs for the audio output to the speaker... that is rated
in power, (watts.)

2579. Hillsborough/Tampa Debate Continues

Newsgroup: rec.radio.scanner
Date: 1997-01-21 00:00:00 UTC
From: dpinero@pobox.com
Message-ID: <32e82b35.29997763@nntp.ix.netcom.com>
Source record: 210727

The following is a response to a message I received in the America Online conference entitled "800mhz Trunking" in the Public Safety forum. It addresses an earlier post regarding the public-safety radio trunking issue.

I post it here, with my response, to encourage the ongoing debate over this matter. The responder is BluLine714@aol.com.

Subj: Re:Hillsborough County
Date: 97-01-21 00:04:28 EST
From: BluLine714

I thought one of the reasons we use trunked systems is increased security of communications ? Why on earth would you give a police radio to anyone ? namely the news media ? that is absurd ! they already show up and stick their noses into potentially dangerous situations, we have to keep them safe, at the same time we have to deal with the crisis at hand. Give a police radio to civilians ? your nuts ! who decides who gets one ? What checks will be done to assure this person will use the radio responsibly ? even if it is just a receiver, I don't want to sacrifice what little privacy we have on our police radios to anyone. We have a responsibility to keep information we discuss confidential, is Aunt Marge going to blaber the most recent arrest info because it was Clem's son ? That is really scary. Not to mention the major problems this could cause for Officer safety. Re-think your stand on this issue, I'm not opposed to community police projects or crime watch, but we must draw the line at security issues like this.

MY RESPONSE:

I have to say that between no response to my posts, and the letters of support for my cause, it's great to *finally* get some criticism that I can sink my teeth into! Thanks ahead of time for making some great points.

PS agencies *primarily* go trunked to make more efficient use of the frequency spectrum in their respective geographic areas. Increased security was apparently implied as a selling point by manufacturers on the basis that the trunking process made it more difficult to follow specific conversations. In this way, trunking is more secure. Indeed, many passive hobbyists would just as soon watch TV while auto-stepping through the channels nonstop than put up with all the random, spotty, conversation. If you've been following this group, or Usenet, then you are aware that Uniden has come up with the Trunktracker to monitor Motorola systems, and apparently has a

GE/Ericsson model in the pipeline. A lot of people believe Motorola sold out the protocol that makes these Trunktrackers possible to encourage the purchase of digital systems by PS agencies, but that's probably not true. There are a lot of non-PS agencies that are trunked and should be scannable. The presentation of the Trunktracker has revealed the "trunking is more secure" pitch as the secondary sell-point that it was all along, and some PS agencies aren't happy with that.

As to why you would give anyone a radio to listen in, there are a lot of reasons. But let me start by pointing out that most agencies don't. People who listen in to police calls have been doing so using inexpensive scanner radios. 60 years ago they simply used the high end of the AM radio band where one-way "calling all cars" police broadcasts were made. People could sit up late at night and listen to their tax dollars at work, as well as keep up with the crime in their neighborhoods. In my opinion this innocent model of police communication was the first passive but accidental example of community policing. It was a beautiful model that, IMHO, should be reproduced today over fixed frequencies (much the same way that NOAA broadcasts continuous weather reports over a series of frequencies, police should do the same). Police eventually moved to VHF/UHF frequencies. Little concern, and for the most part beneficial consideration, was given to the fact that anyone could listen in. In cases where casual listeners were unwelcomed, selective use of encryption was applied.

Not until now have citizens been required the precise hardware used by police to listen in. It's not difficult to buy the radios, but in some cases it is difficult to convince the local PS agencies to program them so that they can receive the PS transmissions. Policy seems to vary from agency to agency as to whether or not they will program the radios, but higher-thinking and innovative police departments will do it. Most will do it because members of the community have squawked, and in Florida, Dade County did so after realizing that it might be violating the Sunshine Law (which Hillsborough County seems prepared to ignore), but I remain the optimist and presume that a few have done so in immediate recognition that it's the RIGHT thing to do from a social-beneficial standpoint. The idea that an agency has to be antagonized into a proactive solution is pretty twisted, but lends credence to a long-standing theory of mine: there aren't enough nerds involved in police work. :)

I believe that some agencies only believe their communications should be secure solely because they haven't thought about it. Noncreative police administrators assume that because they deal with security-related issues, they should engage in a policy of complete secrecy. They forget that the primary level of crime fighting they engage in involves opportunists and thrill-seekers...people not likely to make extensive or *effective* use of police scanners to commit their crimes.

If an agency is allowing the public to listen in from a platform of hostility, it's only because the media has the financial resources, and generally the winning arguments, to kick PS agencies in the ass. Agencies get into trouble, however, when they give in to the media to provide radio programming - but don't do the same for the average citizen. I happen to believe that giving a radio to no one, is more respectable than sitting back and selecting who is worthy of access and who isn't. This is treacherous in a free society because it literally forces alliances between powerful media interests, and agents of the government. I imagine most courts would have a hard time understanding why a journalist who earns $6.00/hour is more worthy of access to live government communication than a production line worker earning the same wage in some factory. If this philosophy were allowed to spread, we would all become, as I'm fond of observing, "the mental slave of Willard Scott". Newspapers or TV anchors are NOT qualified to deliver ME my news. This is a very serious issue and will eventually be addressed. Smart PS agencies will do the right thing *now*.

When we talk about crowd-control and "dangerous" situations, we forget that there are already procedures and laws in effect to prevent or manage swelling crowds. Police scanners have nothing to do with the issue. I may show up at a crime scene because I hear a siren just as much as I might because I hear something brewing on the scanner. If you want a story about crime-scene management, consider the story here in Tampa where two police officers, Mike Vigil and Kevin Howell, were shot by an assailant using an assault rifle. They were near death when an off-duty paramedic using a police scanner arrived at the scene and literally saved their lives. So credit doctors who are sure they would have died without the quick action otherwise. You might argue that as a status member of the medical community that the paramedic had a "right" over all others to monitor police calls - but think about it. He was off-duty and monitoring in the spirit of the classic scanner-nerd or concerned citizen, not as some medical professional. He wasn't roaming the city in free-lance search of a medical crisis! And if it weren't for the conventional broadcast of PS communications, he probably would have never heard the call to begin with since PS radios cost $3,000. He'd not likely have such a radio with him, nor would he be allowed to carry one out of a budget-constrained medical facility. It's that simple. And if it wasn't made clear earlier, remember that the curious public IS the media.

As for security, the good news is that going trunked usually introduces a more technologically capable and flexible encryption system as part of the upgrade. Therefore, on specific surveillance or other sensitive tactical operations, it is very easy to encrypt on-the-fly. When I talk about proactive measures to ensure that the citizen may continue to eavesdrop, I'm only talking about basic *patrolcasts*. And as for the invasion of privacy issue, it might be more credible if it didn't only "suddenly" become an issue in the wake of this debate (after all, for 60 years who gave a damn?). In any event, as police might argue to me, everything is available in city

hall anyway. Names, places, etc. Additionally, a swarm of police cars, fire engines, and ambulances in my neighbors yard would already suggest to me that something unusual is going on.

This is a fresh frontier that few people have given any thought to. As you can tell, I believe that any agency serious about community policing starts by promoting openness using any technological advantage that it can, not isolation and secrecy. Equally sickening is the spotty use of fax machines and e-mail that only a handful of PS agencies seem willing to use in an effort to communicate with the public. Why, for example, when a car is stolen, the bulletin can't be faxed to thousands of citizens immediately? A thousand eyes! You can take the possibilities as far as you want - my plight only starts with the open-broadcast issue, believe me. And, the more I rethink my position, the more potential I see for the future.

Thanks again! For more information on this brewing issue, visit my website at http://www.pobox.com/~dpinero. To encourage the right attitude in your own community: Talk and question...talk and question!

I used a R-10 on Thurs.
The size is like an HT and it does look like an HT.
The display is a nice size.
The audio is not bad at all
The FM in the 88 to 108m Sounds Very Good < vol and Audio sound...
They need to install a better quality BNC.
The AM 500 to 1.6m on an EXT. Ant. is not bad.
On the whip it sucks
The AM Audio is fine and so is the sound.
The Air band works fine <good vol. and good sound>
The unit does look just like an HT even when you have in your hand
sometimes you think its an HT
The Batt life on ALK. Batts is not bad at all.
The scope mode is ???

I did not have time to play in the scan mode
I hope to do it Tomarrow Tues.

I will try to run a true test on it if I have some time.
I hope to give a more in depth report later
But I did want to give some info.

The unit is a factory demo.

2585. PopComm Usenet Ad (was Re: Uniden Trunked Scanner)

Newsgroup: rec.radio.scanner
Date: 1997-01-21 00:00:00 UTC
From: Glenn Hansen <grhansen@worldnet.att.net>
Message-ID: <01bc07e8$112b78c0$9c8393cf@ghansen.accesone.com>
Source record: 210733

Popularcom (popularcom@aol.com) writes:

: Glenn and others...

: I consider my post very relevant (and factual, I might add from what

No, it was an advertisement Please, repost what were relevant facts =
concerning the Uniden=20
you say you shared with this Usenet group. I must have missed it.
All I can find is two models numbers and a promise PopComm will run the =
pictures
with the specs in March. Man, we all jumped up early one morning to read =
that!

: Uniden has so graciously provided me - NOT hearsay, Internet droppings =
or
: rumors.

So you are sailing the folks that actually posted FACTS about the new =
Uniden
on here are just leaving droppings and rumors. Are you telling me that, =
for example, the
info Greg Knox posted is bad? If there are rumors and droppings and
you know better why haven't you posted corrections? One word, SALES!
Maybe you should take a look at those postings before defending your =
advertising=20
in such a manner. =20

Harold, how would you characterize a person that stands silently as =
rumors and
Internet droppings fly when he knows the facts?=20

: And yes, it is unfortunate that magazines - ours included - are
: typically behind the power curve when it comes to posting real-time =
"hot"
: news items such as this. That's why I took the liberty of making the
: posting in the first place. It was the "right thing to do" considering =
the
: previous postings.=20

See above paragraph.

: And as I see future needs to make accurate, timely
: postings I'll do so - for the benefit of ALL, not a select few folks =
who
: don't care anyway. An advertisement? I'd be more inclined to call it a
: thoughtful post and I'm sure others would agree.

Convent? "Buy my magazine in March. I have the facts but you have to =
pay
to get them." is all you said. You were only being thoughtful to those =
that
have a financial interest in PopComm. =20

: I also must say that as
: avid scanner users we should naturally read all the reviews/spotlights =
on
: the new TrunkTracker scanner we can get our hands on...Pop'Comm, MT,
: newsletters, etc. I know I will.=20

I agree. I was a subscriber to PopComm for many years and a supermarket
buyer before that. It got to the point that the few pages of scanner =
related
(usually quite dated) information wasn't worth the price. I could =
usually read
all the scanner stuff in Pop Comm in the time it took the wife to get
a head of lettuce and notice I was missing.

: My goal is to give readers what they've been asking for quite a
: while. If it takes an occasional Internet posting, so be it.

How in the world does advertising an upcoming issue of PopComm=20
on the Internet help your readers???? Or have they been asking you to
post the upcoming contents of PopComm on the Usenet? I don't get your
connection between your readers and posting ads on Usenet.

: Frankly I'd
: rather read something that's news worthy "what's coming" than the =
constant
: din of back and forth spitballs that reminds me - and I would think =
you
: too - of grade school.

That's Usenet, get used to it. Frankly I only read the posts I care to. =
It is pretty
easy to ignore spitballs. If you need any help using your newsreader to =
skip
messages drop me a line, I'll help out! As far as "what's coming" I =
would venture
to guess Pop Comm's Uniden article will contain nothing that hasn't =
already
passed through Usenet or a few of the better WWW scanner sights.

: Incidentally, from listening to the readers who write me letters every
: month and judging from our readership survey results, most have more =
time
: behind the dials than - well....many other folks who are too quick to
: judge without all the facts.

Who is judging without the facts Harold? If you are making a judgment =
on me then you=20
are merely a hypocrite. You know nothing about me or the amount of dial =

time
that I have, obviously! If you meant this about others on here, well =
such a
statement speaks for itself.

I do know that Rachel Baughn doesn't use this newsgroup to announce the =

upcoming issues contents. I also see FACTS not announcements posted =
frequently by=20
the writing staff of Monitoring Times. These staff writers of Monitoring =
Times post relevant information
that can be read right now. Yes, a couple of them do reference MT, but =
only as a=20
reference to past issues that I can recall..

So Harold, would you like to compare lists of what the writer of PopComm =
have contributed to this
newsgroup and those that write for Monitoring Times? =20

GRH

PS What is really a shock is Peter, John, Hugh, Ron and company haven't =
stormed in here with
their net badges. These bad boys raised hell for months over a fellow =
posting a long fact/reference
article that mentioned his company. What a surprise!!

2593. Software compatible with Optolinx dataslicer

Newsgroup: rec.radio.scanner
Date: 1997-01-21 00:00:00 UTC
From: Scott and Donna Halligan <halligan@capecod.net>
Message-ID: <32E55154.6289@capecod.net>
Source record: 210741
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave,alt.radio.scanner.uk,rec.radio.amateur.digital.misc

Hello all,

Just FYI, I have tested the following software with the dataslicing capabilities of the Optoelectronics Optolinx. All tests have met with success.

1. AEA ACARS 900 - reception of 2400 baud digital aviation mode.
2. Software Systems Consulting PC-SWL - many digital HF modes including Baudot RTTY, Sitor A and B, and NAVTEX.
3. HamComm 3.1 - ditto #2.
4. PKTMON 1.2 - HF and VHF packet radio.
5. POCSAG DECODER 2.03 - 512, 1200, and 2400 baud pager mode.

To make this work, run a cable from your speaker or record out jack to the AUX input on the front of the Optolinx. Run your software and enjoy! Neat stuff, considering I had no idea that the Optolinx had this capability when I bought it to computer control my AR-8000!

Enjoy...

2595. Terms: Red Ligh & Siren

Newsgroup: rec.radio.scanner
Date: 1997-01-21 00:00:00 UTC
From: "Bill in Cleveland, Ohio" <thing@en.com>
Message-ID: <32E51686.7793@en.com>
Source record: 210743

It would be interesting to hear other terms used for using red (or blue)
light and siren through out the world. Add to this thread. For example:

Central Ohio uses the term "running hot"
Ohio State Patrol is Signal 5
Greater Cleveland uses "red light & siren"
Some FDs use Code 3 in Ohio
Cleveland PD uses Code 1

When did Cleveland discontinue the old repeaters on 37.x MHZ?
The last time I remember hearing them was around 1970. In Oklahoma, we used to pick up Cleveland police and fire frequencies fairly often in the Summer during sporadic E season.

I used to think the Cleveland P.D. repeater was really neat sounding. The receiver or receivers seemed to be of the old Motorola type with the squelch that remained open for about a quarter-second after the mobile unit's carrier dropped out. After that, you heard a complex succession of clicks and cur-chunks as various relays opened or closed until the transmitter dropped out after a couple of seconds. Cleveland had a strange sort of tone signalling system that may have been home grown and was quite clever in that dispatch could signal a mobile unit by sending the low-frequency tones right over the voice. The tones were two bursts of low-frequency audio, each containing two frequencies. They sounded like psychodelic base chords. I've never heard another system like it since.

What are you talking about? I did no such thing. I said SOME PEOPLE say the 9000 receives cellular images well in the 360 to 400 range. I RARELY get cell images on my radio, perhaps once a week or so, and then rarely for more than a minute or so, as the vehicle passes nearby.

Yes, the 890 was horrible with images and intermod. That's why I got rid of it - quickly.

NO. There are exceptions. I just read the ECPA. It's pretty much what
it always was.

If a judge is unavailable, and it is a matter of life and death (or a few
other immediate need cases) its possible to tap first, then get it
approved within 48 hours.

I am looking to purchase my first scanner and since I cannot find a Pro 43, I am looking at a used Pro 60 for $260. I am also considering a new BC 230xlt. Please post any comments.

2608. AOR AR7000 How does it compare??

Newsgroup: rec.radio.scanner
Date: 1997-01-21 00:00:00 UTC
From: rd <rld1234@erols.com>
Message-ID: <32E52F94.793D@erols.com>
Source record: 210756

The AR7000 is advertised as a DSP technology receiver. It has a built in 16 color 3.5" LCD (similar to the SDU-5000) which displays data including a spectrum display. The signal demod and filtering are performed using a 16 bit DSP with digital down conversion digitising signals at an IF of 10.7 MHZ.

Does anybody know more about this AOR receiver as to capacity. Also, how does it compare with the just released AR 5000.
I'm just getting ready to purchase one but would to know what the 7000 has to offer. On the cellular side, will it be able to process the newer digital transmissions?
Anybody ??????

: Does anyone know of any commercial 2-way radio newsgroups or web sites?
: --

I posted an article like this a while back and got heaps of replies saying there was nothing but everyone would like there to be something.

For web sites just go to your favourite search engine such as www.lycos.com and search for words like motorola, tait, specfic models etc. A couple that I know of are:

MOTOROLA http://www.mot.com

TAIT http://ds.dial.pipex.com/akmobile/tpmr.htm
http://vellocet.insync.net/~taitus/

CHICAGO COMMS http://www.chicomm.com

Also the newsgroup rec.radio.swap is mainly commercial 2 way based.

Cheers

Matt

2610. LAPD Unit Numbering Request

Hi,

I would like to know if anyone can provide me with a unit number listing for the LAPD or point me to a site that has one. I remember going to a website about 6 or so months ago that had the unit numbers and some additional stuff. Also, division locations, codes, etc would be great.

If you are in the Philadelphia area, check out my web site at:

http://www.voicenet.com/~jcardani/sjscan.htm

thanks,

Joe

Well, sir; I'd agree with you but for the fact that the original post was long on promise and a bit short on real content. It reminds of the "Newsbreaks" tht one of our local TV stations interrupts programming to iar. When you get through seeing it they tell you that there is something highly important going on and that you can find out what it is and how it may affect you, IF you tune in to the 6PM news.

I'm glad to know that PopComm (which I have read since the very first issue without fail) is going to provide a picture or whatever, but to ballyhoo forthcoming features as a specific and sole objective of a post in the newsgroup goes a wee bit beyond my own idea of substance in postings of the type we have come to expect. There was a prolonged and bitter flamewar here when another contributor here with commercial ites did far less to promote his commercial efforts. It was unwarranted and unwelcome, as would be any prolnged confrontation over the original post here; but the point about needing to tilt the balance in favor of substance over promotion was well taken I think; and the lesson might be kept in mind by all.

2614. Question about Trunking Scanner

Newsgroup: rec.radio.scanner
Date: 1997-01-21 00:00:00 UTC
From: matthew@adelaide.DIALix.oz.au
Message-ID: <5c2f5fdbn1@adelaide.DIALix.oz.au>
Source record: 210762
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Ive just got a question about the new trunking scanner (bc235xlt?) due out soon.

In Australia our 800mhz Motorola trunking system is between 865.000 and 870.000mhz. Generally a user that is on 865.0375 is then on all the .0375 and the .5125 are always on .5125 with the first three numbers changing such as 865., 866., 867. etc

What will the trunking scanner do for us here in Australia?

I like listening to a business user on the .5125 freqs so I just put these into my scanner and scan them but I also get the other users on them. Will I be able to tune into one user/business as it changes channels, blocking out the other users on the same group of channels?

Also, I dont understand how this scanner will exactly work. (Mainly as trunking here is not that common as it is in the USA) Will I be able to track 1 user out of all the channels blocking out all the rest and if so, how does this work, how do I set it up etc

I realise it may be a bit early to know all of this but Im really interested in finding out more. Ive read all of the previous postings but it is very cofusing to me mainly due to the 99% of radio systems being conventional here in Australia.

If anyone could explain things in a basic language using terms like frequencies, explaining what groups etc are it would be really interesting to read.

Many Thanks

Matthew

Message-ID: <32E58179.C4@ix.netcom.com>
Source record: 210768

Hello all,

I'm a new scanner user (1 week now) and I programed my scanner with the police freq that was sent to me after a previous posting and I get the police great. But from time to time I get a useless conversation between two women about basically nothing. It reminds me of when I had a CB years ago. They use call letters/numbers at the begining and end of conversation. The freq is 465.100 and the conversation is as clear or clearer than the police. Any idea what this is? Can I somehow filter it out? I live in Walled Lake , Michigan if that helps.\

Once again many thanks to you guys for all your help, not all NG's are this receptive of new users.

See ya,
Don

Strength refers to power. 3db is correct for working in terms of power.

6db is apropriate fwhen working in terms of signal voltage.

Receivers have been rated in terms of voltage. Recently, they have also been rated in terms of power. This matches the convention of figuring your signal losses in terms of power.

I didn't used to think that was true until last night, after I looked up some numbers and equations, and did some number crunching. I'll be releasing some results in a day or so.

This also means I'm going to do a slight "about face" on some of the opinions I've expressed here. Hhmm.

>>3. RG-58 loss per 100 feet is as follows: 3.2db @ 50mHz, 6.4db @ 200mHz,

They are are close to what I found. Losses I saw were somewhat higher at higher freqs, but similar.

>Instead of RG-58 you could use RG-8X, RG-8, or 9914, given in order of
>decreasing loss and increasing cost. Also foam dielectric has lower
>loss than solid dielectric. In other words RG-58 with foam dielectric

As it happens, RG-8 foam (0.405 inch dia.) comes remarkably close to Belden 9913. The little data I have 9914 suggests that 9913 might be lower loss. 9914 has a foam PE dielectric, 9913 has air space

dielectric.

There are also gaps for things like TV and radio stations. For
example, the gap from 500MHz to 800 MHz are TV channels UHF13 to 69
(aprox). Most scanners don't know what to do with video signals.

Actually, there is no protection for cordless handset as used at home. There never have been.

In fact, the only protection provided are for encypted/scrambled signals (illegal to decrypt/descramble without authorization), and celluar phones (which transmit in the clear.)

The encypted siganl portion is what makes it illegal to decode those premium movies and pay-per-view channels on cable.

Walker,

I've heard of some mods for the 9000 to allow cell scanning that involve adding a DPDT switch. I believe you have to tune in the 450 range after flipping the switch and it actually receives in the cell range. To me, this is not a viable option. There are too many cellular-capable used scanners on the market to worry about. Of course, one could always order an un-blocked 9000 from a Canadian dealer. There's at least one that says they will not charge the customer if the scanner is intercepted by U.S. Customs.

As for the mod on the Pro-2006, I really don't know what's involved. Both 2006s I owned were used, with the mods already done. I did the mod on my own Pro-43 and while not difficult, it was nerve wracking enough that I wouldn't want to do another. While I realize that the Pro-2006s are popular with many people, I never had much luck with them. My main interest is in military monitoring, and I had a BC 2500XLT at the same time I had the 2006s, and the 2500 would be sitting there on the desk chattering away and the 2006 was silent on the same frequencies.

I also purchased a used BC 890XLT that had been modified for cell reception. The display read out in 30kHz steps as it should in that range. Again, I don't know what the mod consists of. I sold that radio because of terrible image and intermod problems.

>cellular by tuning to the image of the cellular frequencies?

Only those scanners whose images fall within the passband of the receiver's front end can hear those images. This is true of many (if not most) double-conversion receivers. The wider the front end (frequency coverage), the better the possibility that you can.

Triple-conversions receivers are designed specifically to avoid hearing these images.

Also, Bob Grove is right, the law says it is illegal to manufacture and use cellular-capable scanners, but does not specifically prohibit the modification, ownership, or selling of such scanners. Need any more proof of how dumb the cellular portion of the ECPA is?

Never tried this method. The 2006 I thought had the cell blocked from
the factory and you had to snip a diode to unlock it (not like that is
difficult or anything). Number 501 or 503 .....can't remember now -
it's behind the #3 button on the keypad. The display even has a 30Khz
step indicator once you do this.

I have seen that there was an article in Monitoring Times about
modifying the 9000 to pick up cell frequencies, but it involved adding
a DPDT switch. Evidently you can send in $2 plus shipping and handling
for a reprint of the june 1996 article.

I have the following Icom receivers for sale:

1. R71A general coverage rcvr w/optional remote control. Excellent condition! PRICE: $525.00

2. R7000 covers 25-2000 mhz. It comes with a TV-R7000 TV receive adaptor and Datametrics scanning software. It also comes with a serial port interface for your PC. Also in Excellent condition! PRICE: $975.00

Neither price includes shipping or COD charges, but I'm open to negotiation. Please email reply. Thanks.

Am I missing something. 1st, good directivity implies high gain.
2nd, this implies dimensions at least several multiple wavelengths
for the frequency in question. Not so small... Maybe not a good
pcb candidate.

Incidentally, consider dropping that "no-spam" stuff. How long does it take
to hit delete for the modest amount of spam you might get anyway?

I did just that. Got the RS antenna, mounted in the attic, fed w/ 75 ohm TV cable coax. I get very good reception. Can't compare A-B to an outdoor since the local codes disallow external antennae, but it is indeed very serviceable. Can't imagine the roofing material would decrease reception by any more than a few db. I think it's safer since it isn't susceptable to lightning, nor does it advertise the presence of radios in the house!

Tommis:

The PRO-2006 was discontinued by Radio Shack in the U.S. approx. four years ago, (correct me if I'm wrong...not sure). The main thing that makes the PRO-2006 attractive is that they were very easy to modify for Cellular reception. It involved clipping a diode that was clearly visible and easy to do with regular wire cutters...no micro surgery.

The BC9000XLT it new, current technology, sold through many distributors, with a warranty. Some additional features beyond the PRO-2006, are: Alpha Display to identify stations being received, CTCSS option board, Count function for how many hits on a particular frequency, Tuning knob, possibly better audio, larger, brighter display, removable AC power supply for mobile operation, 300 additional channels!

Your right. It's possible that what the Martin's did, might only
be an infraction, if they did not do it for any monetary gain.

>I think most of us understand that the
>spectrum inside someones wire belongs to them, and if you tap it
>you are invading their privacy. However there is only ONE spectrum
>of airwaves and they penetrate my home and person whether I like it
>or not.

Some Supreme Court cases which might come into play here...

US v. Katz - privacy can exist, even in an area accessable to the
public, provided the individual has a subjective actual
expectation of privacy which society will recognize as
reasonable.

California v. Ciraola - A police aircraft, flying at 1000 feet, did
not violate the zone of privacy of a pot grower, even
though the pot grower had built a 10 foot high fence
around his crop to hide it from observation. The court
said that such expectation of privacy was unreasonable
in an age where overflight is routine by aircraft.

California v. Greenwood - It's your garbage can, it's your garbage, BUT
as soon as you put it out on the curb for pickup, even if
you have no other means of disposal (including even if the
city mandates curbside pickup), it is knowingly exposed to
the public, and you have no reasonable expectation of privacy.

[The above citings found in a paper on privacy at www.cdt.org]

>In a sense I am intercepting all cell phone calls, but my
>organs are not developed enough (as they are with the visual portion
>of the spectrum) to decode the modulation.

IIRC, The ECPA allows you to monitor cellular calls in order to
determine the source of interference. ;-)

>It appears to me that the special interest of the cell phone industry
>has manipulated OUR law/rule makers into making it illegal to listen to
>certain communications.

But yet they scoffed at the idea of putting a warning label on the cellular phone warning the user that it is possible that the call could be received and that privacy was not insured. If I ever saw a case of manufacturer negligence, this is it. (IANAL)

CTIA (Cellular Telephone Industry Association) was well aware of this back in 1987 when they tried to push through FCC RM 5836, a proposal to put a label on scanners that it was illegal to monitor cellular communications. They wanted to label scanners, but they felt that any warning on their own product would affect their sales... that is gross negligence IMO. The proposal to label scanners failed, which should have been a stronger reason for them to put on their own warning label. They did not.

>To the best of my knowledge it is not that
>I may listen to some frequency, but that I might go "legal or illegal"
>at any moment while doing so depending on who is transmitting. (aren't
>there some frequencies shared by cordless phones and other devices).

Yes. Children's walkie talkies, baby room monitors, headset communicators, houshold intercoms, and even some wireless microphone systems.

BTW, the ACLU fought to have cordless phones added to the ECPA ban, with the argument that their is no real difference between cordless phones and cellular phones. As Bob Grove points out in his "Closing Comments" in the April 1990 issue of Monitoring Times, they have concluded that correctly, ther is no real difference, "NEITHER device can be considered private."

>I also think that whatever law "might" make it illegal to use these
>and maybe any other forms electronic/mechanical communications should
>automatically exempt anyone who wants to report a crime (ie someone
>overhearing murder plans).

Not that I recall. Back in 88 or so, when I faced the dilemma of reporting a communication I heard involving a crime (not on cell or cordless phone) I believe that it was that the only way I could mention anything about what I heard was if I was supeonaed by a court... however, interesting catch-22... how would the court know unless I told someone?

[BTW, I did tell, and the courts were busy... the charges against the original perp, an ex-cop, allied with his former boss, and a couple of others, going to jail for many charges, including murder. Two cops, a cop's brother, and a demolitions expert... Sadly, only the two cops got charged with murder... the one who actually fired the killing bullet, the cop's brother, along with the demolitions expert, were given immunity to roll over on the other two on the murder charge.]

>My answer: The public should be educated about radios (this is kind of
>happening right now) AND the cell phone / radio industry (police, fire
>rescue etc all included are currently are) should be offered technology
>to scramble their communications on OUR airwaves if they want to reduce

>the probability of it being overheard.

"No way! That would hurt the almighty dollar."

Let them have false guarantees instead... Like the Radio Shack Droid
who told the Martin's "Oh No, this scanner won't pick up cellular calls."

Oh... Yeah... I believe Radio Shack is a member of CTIA. Nice.

Don't forget atmospheric mixing of signals. This is yet another way
a scanner can pick up an image (not IF image) of a signal.

>Also, Bob Grove is right, the law says it is illegal to manufacture
>and use cellular-capable scanners, but does not specifically prohibit

Wrong. It is NOT illegal to use a cellular capable scanner. It is not
even illegal to listen to *a* transmission on a cellular frequency. It
IS illegal to listen to a cellular transmission however.

Note the subtle difference.

>>foam is better than RG-8 solid and so on.

>
>As it happens, RG-8 foam (0.405 inch dia.) comes remarkably close to
>Belden 9913.

I think you can usually find RG-8 foam cheaper than 9913 too.

>The little data I have 9914 suggests that 9913 might be
>lower loss. 9914 has a foam PE dielectric, 9913 has air space
>dielectric.

I forgot all about 9913, thanks for bringing it up. Yes 9913 should
be slightly better than 9914 especially at UHF and above.

Those are "splinter channels".

Repeater Channels like 462.6750 is the equivalent to "Channel 9/
REACT" on CB AM are used in emergencies. You would probably need to
have a membership to a GMRS repeater.

2654. performance of down converters?

Anyone have any experience using downconverters? I picked up a
SuperConverter II recently, and I seem to get getting more noise than
signal on its output freqs,
Is this typical? Inquiring minds want to know!

Innovative Technologies (innovative_technologies@actcom.co.il.NOSPAM) wrote:
: Hello,

: This post might be resemble a previous posting, but is intended to
: pinpoint our problem: We need a small, low cost, directional (not
: necesserily with gain, just good front to back/side ratio) antenna for
: the 800-900MHz public service band. We would like to integrate it on
: the main board of our system to lower costs and lower dependance on
: external suppliers, as well as keep size small, and that is why we
: would like to etch it directly on our PCB. Can anyone give a pointer
: to such a small, low cost commercially available antenna, or better
: yet, a PCB layout or general guidelines for such a design?

If you have a directional antenna, you have *by definition* increased gain. The basic PCB antenna will be a quarter wave (over a ground plane) or a half wave (ground plane independent) antenna. This is relatively omnidirectional (but not completely so). See any basic antenna handbook for the radiation patterns of these types of antennas. More complex types will tend to focus the pattern more narrowly (and therefore will have increased gain), but as to which general type is what you want, you would be best to consult a book on antenna design. Perhaps the AARL handbook might be a good start.

Bob.

: freq always be joe shmoe's ?

: If so, wouldn't that be reason enough to assume someone could've found Newt
: Gingrich's frequency, and then recorded every thing he ever said, thus
: the story could well be viable?

Cell phones have 832 possible channel combinations.... however each of the
two carriers has half of these. A frequency is assigned on a first come,
first served basis, also depending on what frequencies the tower the user
is going through is capable of using. Frequencies will change as each
cellphone user moves from the range of one receiving tower to another.

It is possible to monitor all the *input* frequencies to a cell tower with
a fast scanner. When a person activates his/her cellphone, the listener
can then do a search until they get a hit on that user.

Yeah, at least you can get the main screen up if you reboot to DOS mode,
but when you give it the run command, it crashes and burns. It appears
to put the SVGA card in a very strange mode. The monitor goes into sweep
protect. And the only way out is a hardware reset. That's with it configured
for the default 640x480 mode, which should work on any hardware. I haven't
tried it yet in 1024x768. PC is a 100 MHz 486DX4 with 16 Mb RAM running
Windows 95 and using an ATI Mach64 video card and a Soundblaster 16 sound
card. I configured the EMS memory, and at sign on the program Oks that and
finds and checks the sound card Ok too. But give the Run command and the
screen goes dead and the machine locks solid. Not pretty.

Hi Rick.

I have one of the GRE Superconverters for handhelds and one for base stations. As much as I hate to admit it, it is not as good as a receiver that has the 800 mhz frequencies unblocked, an image, or a receiver modified for virtual downconverter. My experience is much like yours with a converter. I think the base unit works a little better than the handheld version, though.

From what i've read, it will scan trunking talkgroups in the same way a conventional scanner scans frequencies. I don't know for sure but I bet that it would be possible to lock out talkgroups you don't want to listen to or manually monitor a talkgroup that was of interest.

This is new technology, so there's going to be a new way of doing things. Personally, i'm waiting for a detailed review before I make the final decision to buy one.

I also bought a Fairmate HP2000 new about 5 years ago. This is the same radio, but under a different name. I agree with everything above. A major advantage is that there are 10 banks with 100 channels each. Although not easy to program, switching between banks is easy once you learn to do it 'parrot fashion', ie by letting your fingers wonder all over the control panel pushing the correct buttons (about 7 steps!) without thinking about it!

With 1000 channels available, a major advantage is that any one channel can be selected as the priority channel and there is no limit for the number of channels that can be locked out. If you don't want to listen to SSB, then you won't be dissapointed.

I have one scanner that picks up cellular phone calls and one that
does not ?
Is this an image transmission I'am picking up.
Both are radio shack Scanners.
I owned 5 scanners.
Only that one will pick it up usually from 900 - 912 mhz

There is a difference between "cell calls" and "cell channels."
The scanner won't pick up cell channels, as sold, but if it's a dual
conversion
model, may well pick up cell calls.

>

The FCC has nothing to do with this. It's the ECPA that was allegedly
violated,
and the FCC doesn't enforce the ECPA.

It is not illegal to modify your scanner to tune to the cell
frequencies *now*.
There's no reason to think that there would be a problem being "caught"
with a modified scanner.

It seems that a lot of people (including some who really ought to know
better) are having a real problem with understanding that people
actually *do* spend their time scanning the cell bands, hoping to hear
something juicy to tape.
Heck, there are people out there who torture puppies and little girls.
There are people who blow up buildings.
What's so difficult about people who scan/tape cell calls?
Even Bill Cheek says it's unlikely (and it is), but that certainly
doesn't mean it can't happen.

What you are referring to is a ruling that HAMs can carry Amateur Radio
gear
that can tune to public safety frequencies.
It has nothing to do with scanners.
Both the FCC and the ARRL have been very clear on this.

Matt,

In your case, talkgroups or subfleets (same thing) are divided by user or company, each company being on a different talkgroup or subfleet (very large companies might have more than one talkgroup or subfleet assigned to it).

In the commercial sector, these systems are usually owned by a commercial radio business that then leases space on the system to its clients (the companies you like to listen to). Once you enter all the frequencies used by the system the new radio will automatically display the talkgroup/subfleet IDs on the system. These IDs will be a series of number or letters and numbers. It will be up to you to match these IDs with the different companies by listening and figuring out which company is on which talkgroup/subfleet. Once you know which talkgroup/subfleet belongs to the company you want to monitor you will be able to lock out all others. Hope this helps.

John

2686. Mods done here.

Scanner Mods done, price includes return Shipping via US priority Mail.
BTC-7 $80.00 Pre-Paid with unit
Pro-51 $60.00 Pre-Paid with unit
Pro-23 $60.00 Pre-Paid with unit
Pro-25 $60.00 Pre-Paid with unit.

Yes it receives all of the 800Mhz bands,
In fact the Pro-23 and Pro-25 even use 30 Khz steps where it should.
The BCT-7 and the Pro-51 use 12.5 Khz steps.

>
>Some years ago, a person in- I think was Iowa or Oregon- was
>prosecuted for monitoring cordless phone.
>He appealed to the state Supreme court and the conviction was
>reversed.

I'm sure we are both recalling the same case. Last night I went through a lot of back issues of PopComm and Monitoring Times trying to find the proper cite... Best I found was a reference to it in a April 1990 closing comments column by Bob Grove in Monitoring Times.

"A recent appeal by a convicted felon, whose nefarious dealings over his cordless telephone were monitored by a neighbor whose own cordless phone picked up the conversations, was rejected by a judge who sensibly reiterated that the user of a cordless telephone cannot expect privacy. A new appeal is planned."

From the above, it appears IMO that the judge was "reiterating" the finding in the Supreme Court cases having to deal with an unreasonable expectation of privacy, such as California v. Greenwood (1988) and California v. Ciraola.

>The state appealed to the US Supreme Court, who refused to hear the
>case.

One reason for denying to hear it, would be they have nothing new to add...

>Will try to find the citation for this case and post it if anyone is
>interested.

I'm still looking too... Not counting the denied appeal, it was prior to April 1990... Of course, that case covered cordless phones and not cellphones... At that time, it was legal under US law to monitor cordless phones. Now that cordless phones are also protected under the ECPA, such a similar case might be different as the law specifically forbids the intentional monitoring of them... however, now that cordless phones have the same protection as cell phones (since 1994) I would suspect that any case regarding one, would also create precedent for the other. Existing precedent might be helpfull in future cases, but it is by no means as clean cut as the cordless cases were prior to 1994... now it is Precedent VS ECPA, and until those portions of the ECPA can be ruled "stupid and unreasonable"[1], I wouldn't place bets on the Martins not being convicted.

[1] Hey, I'm not a lawyer, but it sounds like a good ruling to me.

Before you go calling this person retarded, I am in law school and the constitutional rape in the Simpson case was every where throught out all of the pigs activities in the 9 months of the trial. Conducting a general search of the house, leaping walls NO WARRANT when he was already a suspect, Unauthorized use of OJ's vcr to watch frog man tape also not covered by warrant. Consumption of Mr. Simpson food out of the refrigerator in the home. I could go on not excluding police proceedure in handling of evidence was gross. Law officers must up hold the constitution if their ever going to get the trust of society. Many try to do just that and are good considerate folks but the VanAtters and langes of the police community give everyone the name pig, even going as far as leeking Furhmans problems with his mouth and personality to lay the blame of tampering on him. When good old Van carried blood around for three hours in a suit pocket and later discovered the socks when just 25 min before a police video cam shows no socks on the bed room floor. These are the retards

Carollee,

Do you know what you're asking here? I send out frequencies to people now
and then that ask, but not for a whole state!
Why, just guessing, that might be as many as 100,000 frequencies! Your best
bet may be to check out Percon's web site for frequencies.
http://www.perconcorp.com/db_srch.htm You'll have to narrow your requests
down to Cities and Radio Service though :o) Have fun!

While digital cell phones exist, that doesn't mean that all areas can
handle them.
Here in Phoenix, one of the cell providers has *just* made digital
service
available. The other hasn't, yet.
If you want to 'roam', analog is your best bet, because of the fact that
so many
areas can't handle digital, yet.

And another point...

if the Democrats HAD "ordered" the interception... and if it had been done with serious technical help as some (Bill Cheek) claim... with a big enough "network" to apparently watch not only Newt's cellphone but also those of all other Republicans he might possibly call (an aspect that puts severe doubt on the "deliberate intercept" theory, but even ignoring that for a moment...)

MY GOD, DON'T YOU THINK THEY COULD HAVE CAUGHT SOMETHING MORE INCRIMINATING??? OR EVEN MORE INTERESTING?

I mean, why waste this perfectly good (to most) cover story of an accidentally monitored call on something this trivial?

"Yeah, Newt was talking about how to deal with the ethics violations charges." Gosh, what a surprise ... and all along we thought he wouldn't talk to anybody about it.

I think he meant, "Of the 2006's, only the user-modified ones can tune
cell freqs."

David
```

And every time they do, they should get sued for their cameras and their shirts. I loved it when the FSU passed a new set of guidelines allegedly respecting privacy and forbidding the creation of a hostile working environment, and immediately thereafter created one by installing surveillance cameras, even in class-rooms and at their career counseling center. I take that back. There was already a hostile working environment because of their vile, disgusting FSU KKKard system.

They've been violating the Privacy Act & FERPA for years, make that decades, now, but since "Sandy" is a good buddy of the wicked witch of Waco, they remain untouched, the federal gov't deflecting the complaints rather than enforcing the federal laws. And she's got another 3+ years of immunity for the murders she's confessed to having committed. Fortunately, there's no statutory time limit on prosecutions for that.

You did touch on something worth a try. Record them. Get in THEIR faces with lights, cameras, and microphones of all shapes and sizes. Since their actions are "public business" it would seem appropriate.

The reasonable expectation of privacy, the right to be let alone, is all a snearing joke to these slime. The only thing they understand is power, and it's all that they want, power to force others.

The question on the proverbial table, as it has been for several years, is how to stop them.

It doesn't work any more. That's the point.

2703. Anybody dealt with JAVIATION (UK)

Newsgroup: rec.radio.scanner
Date: 1997-01-22 00:00:00 UTC
From: Byron Webster <bwebster@odyssey.on.ca>
Message-ID: <01bc0851$343fc960$68706bcf@mur.odyssey.on.ca>
Source record: 210475

If anybody has dealt with Javiation (in the UK) I would appreciate a note as to how reputable they are.

Thanks Very Much

bwebster@odyssey.on.ca

2704. Scanner Model Info FAQ - WARNING Long posting

Newsgroup: rec.radio.scanner
Date: 1997-01-22 00:00:00 UTC
From: Rich Wells <wellsr@ibm.net>

Scanner Model Information FAQ Last updated : 01/22/97
---------- ----------

Introduction
This FAQ is intended to convey as much information as possible about radio scanners and receivers that the average user will find in today's market. Information is given on most models in current production as well as for the models manufactured in the past several years which will be found in the used equipment arena.
As of this time, this FAQ is NOT intended to provide any information on radios that make use of crystals to receive particular frequencies; only digitally synthesized programmable/pre-programmed units are covered. Also, only those units capable of at least receiving frequencies above 30MHz are listed; no shortwave/HF equipment is covered.
It is hoped that this FAQ will provide information that is often hard to find and spread across several different sources. With this information in hand, the intended buyer/collector will be better able to evaluate most models found in today's market.
While every attempt has been made to provide factual information, there is bound to be errors where so much data is involved. These errors might come from the manufacturer itself, printed resource material, the author's own memory or simply be "typos". If you come across information here that you know to be incorrect, needs to be revised, or would like to see a particular model listed that is not, please send a note to the author at the e-mail address given below. I am also open to suggestions as to how this information could be improved or augmented to provide the maximum benefit to those that make use of it.
There is a section describing models of which I have little or no information about. I would appreciate it if anyone with information on these models would send it to me so that I may include it in this FAQ thereby making it available to our fellow enthusiasts.
Thank you and enjoy!

Rich Wells

WS-1000 500kHz - 1300MHz AM FM WFM
Z30 30-50 118-136 144-174 440-512 AM FM
Z45 30-50 118-136 144-174 440-512 AM FM
Z60 30-50 88-108 118-136 144-174 440-512 AM FM WFM

* frequencies listed are in MHz unless otherwise noted

Remarks : most models carried in the United States will have the cellular
frequencies blocked. Some models may be imported which have the
cellular region intact(AOR, Radio Shack, Uniden). Some models
can only be imported and will have the cellular region intact
(Yupiteru). Some models which have been produced for many years,
like the Icoms, were once sold full coverage but can now only be
purchased in the US with the entire 800-900MHz region blocked.

==========
Scanner information table :

Legend

Capitalized letter or number is used in table for reference to item

Price : average retail price while model was in production
1 = Price < $250
2 = $250 < Price < $500
3 = $500 < Price < $1000
4 = $1000 < Price < $2000
5 = $2000 < Price < $5000
6 = Price > $5000
Type : Handheld/Base/Mobile/BaseMobile
Channels : #
Banks : #
Conversion : Double/Triple
Scan speed : # channels/second
Search : Programmable/Band/Service #=search limit pairs
steps/second
VFO : Yes/No

Delay : Channel/Fixed/Global/None
Lockout : Yes/No

Remarks :
AR2000 : supplied with 4 AA ni-cad batteries, case and strap
AR2700 : supplied with 4 AA ni-cad batteries & metal belt clip
optional digital audio recorder chip
optional speech inversion decoder chip
AR800 : supplied with 2 antennas(VHF/UHF & 800MHz)
AR8000 : supplied with 4 AA ni-cad batteries & metal belt clip
noted for having poor antenna
IC-A22 : aeronautical transceiver
IC-A3 : aeronautical transceiver
IC-R1 : used to be the smallest handheld until the WS-1000
supplied with metal belt clip
features include clock and timer
INF-1 : pre-programmed for all 50 states
INF-2 : pre-programmed for all 50 states, weather alert
Pro-26 : can search at 300 steps/second in 5kHz steps
Pro-2026 : equivalent to BC760XLT
Pro-2035 : dumb auto-store which stores same frequency(see Pro-2042)
Pro-2036 : can search at 300 steps/second in 5kHz steps
```

tape recorder control, activity counter
Pro-2040 : can search at 300 steps/second in 5kHz steps
Pro-2042 : save as Pro-2035 with following changes
1. backlight changed to amber
2. rotary tuner speed increased 3x
3. empty channels are automatically skipped
4. added 200 search pass frequencies
5. auto-store will not store duplicate frequencies
6. attempting to program duplicate frequency gives warning
7. frequencies in a bank can be sorted by ascending or
descending frequency
Pro-2044 : can search at 300 steps/second in 5kHz steps
Pro-2045 : can search at 300 steps/second in 5kHz steps
weather alert, activity counter
Pro-2046 : can search at 300 steps/second in 5kHz steps
HS200 : can decode CTCSS & DCS
Air-8 : also tunes NOAA weather frequencies
TR1200 : 10 programmable search pair limits
same as AR2000
supplied with 4 AA ni-cad batteries, case and strap
BC120XLT : can search at up to 300 steps/second for 5kHz steps
BC200XLT : also sold as the BC205XLT
BC230XLT : same as BC220XLT but supplied with extra ni-cad & charger
BC300A : same as BC700A without 800MHz
BC700A : same as BC300A with 800MHz
BC760XLT : only some keys are backlit
optional pre-amplifier board
BC800XLT : supplied with 2 antennas(VHF/UHF & 800MHz)
BC890XLT : can search at up to 300 steps/second for 5kHz steps
tape recorder control, activity counter
BC3000XLT : can search at up to 300 steps/second for 5kHz steps
BC9000XLT : can search at up to 300 steps/second for 5kHz steps
tape recorder control, activity counter
BCT-7 : can search at up to 300 steps/second for 5kHz steps
pre-programmed for 49 states, highway patrol alert
comes with AC & DC adapters, mobile wire antenna
SC150 : comes in yellow or black with 'Y' or 'B' added to model #
has 10 direct access channels
can search at up to 300 steps/second for 5kHz steps
WS-1000 : succeeded R1 as smallest handheld
FRG-9600 : 24 hour clock
MVT-7100 : supplied with 4 AA ni-cads, metal belt clip & whip antenna
MVT-7200 : same as MVT-7100 with the following changes :
1. rubber duck antenna
2. 2.4kHz SSB filter
3. narrow AM mode
4. internal ferrite bar antenna
5. switchable backlight

Accessories :
Most base station units are supplied with an AC adapter and whip antenna.
Most handhelds are supplied with a plastic belt clip and rubber duck
antenna. Notes of metal belt clips and whip antennas can be found in
the remarks section.
AOR has been supplying their handhelds with 4 AA ni-cad batteries, antenna,
metal belt clip, AC & DC adapters, and carry strap.
Icom hase been supplying their handhelds with an antenna, metal belt clip,
AC & DC adapters, and carry strap.
RELM has been supplying their handhels with an antenna, metal belt clip,
AC adapter, carry strap and earphone.
Uniden has been supplying their handhelds with a ni-cad battery, rubber
duck antenna, earphone and AC adapter/charger.
Yupiteru has been supplying their handhelds with 4 AA ni-cad batteries,
antenna, metal belt clip, AC & DC adapters, carry strap and earphone.

I have a Radio Shack Pro-2037 and it doesn't pick up the Military Bands. It skips from 174MHz to 380MHz. My question is, Is their anything on those frequencies if you don't live near a base and just have Jets flying over every week or so. I was thinking about returning it if I am missing anything.

> ------------------------
> >Strength refers to power. 3db is correct for working in terms of power.
> ----------------------

A 3dB loss in power cuts the power in half.
A 6dB loss in voltage cuts the voltage in half.
Voltage is only half of the components of power (voltage X current).
A 3dB loss of signal is 1/2 of an S-meter number (e.g., from
S-9 to S-8.5).

Does anyone know how to contact Steeple Communications
They were around the Dallas Texas area making a cellular
telephone intercept system in a briefcase. Coulsd monitor
ten or thereabouts phones at a time by setting up a quasi
cell site.
Any info helpful
Thanks.
Gordon Jackson.

Probably the most comprehensive So. Cal Frequcency datbase can
be found in a program called Scanman. The final version was version
12 and was released 12/94.

E-mail me and I'll send you version 12. It's 437kb in ZIP format. If
you have access to AOL, you can download version 11 in the "30mhz and
up" Ham radio area. The upload date is 1/13/96.

Another great Southern California freq. reference is a book called
ScanFan. It is published about every 24 months. Current edition is
6th 1996-1997. Henry Radio in West LA has them. Also you can contact
the publisher.

Unless it starts raining rust, diodes, power amplifiers or other non-linear
devices, I don't think this is likely.

There are enough sources of intermod and RFI here on earth to deal with.
It's a good thing that the atmosphere doesn't produce IM!

I've never come across a Fast Food chain on 161.625 Mhz

Can you tell me what chains operate on 151.625 Mhz?

Do you know if 151.625 Mhz was the Speaker (hear both sides)
frequency or Headset (hear clerk only) frequency?

These are the confirmed pairs that I'm aware of:

FAST FOOD FREQUENCY PAIRING

* = indicates odd frequency pairing

Tom Jones (tjones@goodnet.com) wrote:
: Does anyone have the 10 codes for police departments, especially
: Phoenix? They also use numbers like 101?, etc. What do they mean?
: I'm new to scanning out here and alot of the codes are new to me.

Right off, I can tell you that a 101 is a woman. A 211 is an armed robbery (they musta copied LAPD when they developed codes in the late '60s, as most CA agencies use the California Penal Codes as radio codes - CPC 211 is an armed robbery). There are a few local web sites which have the codes. I'll look them up, and post them if someone else hasn't by then...

If that were true, then the person would never have been prosecuted in the first place.
In any case, a state Court of Appeals decision is a precedent, as is refusal by USSC to hear the appeal.

From: bartman@travel-net.com
Message-ID: <32e5b7f9.2399988@nntp.uunet.ca>
Source record: 210537

I am thinking of installing an outdoor antenna, for my PRO-2002 Scanner. Currently I am using a small one attached to the back of the unit, which is situated in the Basement, & is receiving quite well..

I have a 3 or 4 foot Fibreglass antenna which I can use, I was using it at my Cottage untill someone stole the CB, no big deal because I think it got zapped by lightning, & stopped working, although it still lighted up, but wouldn't receive anything. What bothered me was they stole my 120 volt AC/12 volt DC, 4 Amp.converter..

PS.. What is the difference between "alt. radio.scanners & rec.radio.scanners"..??

Any help would be appreciated...

Its probably a P-50, a consumer grade (light use) radio which has been replaced by the SP50. The P-50 was crystal controlled. The SP-50 is synthesized and fully field programable.

Source record: 210543

>>...the 890xlt is junk...

Huh...I guess I should throw mine away then. Even though it has performed flawlessly for me for a couple of years now. No intermod problems. None of the problems you describe at all - and I live in a fairly metropolitan area (Riverside, CA) with an antenna 30-33' up using Belden 9913 as its coax...

For a more valuable, respected opinion on scanners, please see Bob Parnass' excellent articles that he posts here about monthly. Although he, too, had a problem or two with his test on the BC890XLT, he also notes that there are sometimes HUNDREDS of circuit modifications to the SAME MODEL scanner...making one purchaser's unit possibly entirely different than another's - but boxed and labelled the same scanner model number.

Get to know your retailer - and see what their return policy is. You deserve some "test time" to see if your scanner will perform as advertised. If a retailer will not allow a fairly liberal return policy, hang up and call someone else.

-Clint Bradford

There is an LMR mailing list:

You need to subscribe using the following instructions:

Here is the info:

submissions should (from now on) go to

lmr@ucsd.edu

and requests to join or leave the list (subscribe or unsubscribe) go to

lmr-request@ucsd.edu

or if you want daily digests instead of individual messages,

lmr-digest-request@ucsd.edu

Turnaround time for messages is usually minutes, although bulk mail like
this gets a lower priority than person-to-person mail, so it may get
delayed sometimes. We deliver over 100,000 messages on a typical day.

The blurb that describes the list when people query our listserver is

>The LMR mailing list is for discussions regarding Land Mobile Radio, or
>more informally, "commercial two-way radio". This includes police,
>fire, EMS dispatch and telemetry, taxicabs, trucking, aircraft radios,
>automatic vehicle location, and pretty much all non-broadcast,
>non-amateur, non-CB radio. Perhaps we could call it 'professional
>radio' without being too far out of line.
>
>For-sale and new product advertisements are NOT welcome.
>
>Rather, emphasis should be placed on technical discussions and the
>other matters that affect the business of running a two-way shop:
>new laws, regulations, band allocations, usage patterns, competition,
>all those things that affect sellers, providers, and users of
>two-way commercial radio. Since this is an international network,
>discussions of how things are in other countries are well in order.
>
>Remember to keep it civil and friendly, please.

>
>It wouldn't hurt to check your spelling and grammar either; there are
>more than a thousand people reading what you write.
>
>Enjoy.
>
>submissions for publication to: lmr@ucsd.edu
>subscription matters, list format: lmr-request@ucsd.edu
>subscription matters, digest format: lmr-digest-request@ucsd.edu

One thing you'll notice is that we do NOT set the headers to force
replies to the list. Depending on your mailer, you'll automatically
reply only to the author unless you select the "reply to all" option
- for example, in the Berkeley MUA, you'd use 'r' to reply to the author
or 'R' to reply to the author and the list.

If you find yourself replying to 'mailfail@ucsd.edu', your mail user
agent is misconfigured and needs to be fixed. 'mailfail' is the error
address where undeliverable mail goes - and it's mostly a bitbucket.

Our list handler software is being revised and will, we hope, soon be
able to filter out administrivia like subscription requests that fools
send to the list instead of the admin address. It doesn't do that yet
but we're actively working on it.

Digests are issued about 4 am Pacific time each day that there has been
any traffic, and additionally whenever 32kb of mail has accumulated.
They'll be archived on host FTP.UCSD.EDU in the /mailarchives directory,
just like all the rest of the digests we issue.

Have fun!
- Brian

See you on the list.

2732. ATT: BC8500XLT owners, Keypad Tricks.

Newsgroup: rec.radio.scanner
Date: 1997-01-22 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5c5m9p$45p@coranto.ucs.mun.ca>
Source record: 210547

Keypad Tricks for the BC-8500XLT Scanner.

Hold the 2, 9, & SCAN keys while turning on the power loads test
frequencies into the following channels.

CH	Frequency in MHz
1	25.0150
2	27.0950
3	54.0500
4	111.0875
5	112.0125
6	224.0950
7	299.0125
8	300.0875
9	418.0125
10	419.0875
11	549.0500
12	760.0125
13	916.0875
14	917.0125
15	1119.0875
16	1120.0125
17	1223.0875
18	1224.0125
19	1229.0875
26	25.5000
27	27.0650
28	40.8400
29	62.4500
30	73.4500
31	87.4500
32	127.1750
33	162.4000
34	195.5000
35	220.5000
36	230.0500
37	325.0500
38	453.2500
39	531.5000
40	765.2500
41	954.9125
42	1085.7500
43	1120.1250
44	1205.8750

45 1299.9125

* So far I cannot find any out of band frequencies but if someone found one such as 888.960, you could unblock the 869 to 894 MHz part of the band. Other Uniden made scanners (PRO-23, PRO-46, PRO-51) can restore this
part of the band by this trick. Some of these use several key combo's to load different freq's like 2, 9, & MANUAL loads one type of test frequencies and 2, 9, & LOCKOUT loads different ones such as the PRO23. The KEY seems to be that all key combo's start with a 2 & 9 with one other
key held while power turned on. This holds true on most Uniden made scanners like the above including the 3000XLT & 9000XLT.

Hold 2, 9, & CTCSS while turning power on - counts from channel 1 to 25 Bank (A) very slowly in Demo Mode and displays the following message:

"Uniden America Presents You A New Bearcat BC8500XLT Specifically Designed
For Professional Scanner User. Features Such As 500 Channel, Continuous Band Scanner V.F.O. Control, 20 Banks, 25MHz to 1.3GHz, Turbo Scan, 10 Priority Chs, Auto-Store, Aux.Tape Output, Alphanumeric LCD display. Great Stuff!! For Example DPS Dallas Texas HWY Patrol"

* This message is displayed over and over. This will only work if you first Hold the 2, 9 & Scan keys while turning on the scanner and then turn it off. Finally Hold the 2, 9 & CTCSS keys and turn on the scanner. I guess this was used to demonstrate the scanner at the CES.

Hold 2, 9, & PROG while turning power on - Display goes blank and can hear background noise/static like listing to an channel with the squelch open while channel not active. (Not sure what it's for, maybe a test mode or a Program mode. Very Strange). Any ideas?

Hold 2, 9, & MANUEL while turning power on to clear all channels to 000.0000 MHz. You can use this like a system reset to clear ALL memories.

There maybe other keypad tricks but this is all I found so far. Don't you love the Uniden programmers. I'm looking for the game thats been rumored to be hiddened in it's firmware. I'll find the secrete key tricks someday unless someone beats me to it.

If you know anyother keypad tricks for the BC8500XLT please E-mail me.

Thanks, Carl.

Not sure if that's the right subject, so I'll explain.

I've heard of devices that let you shift one set of frequencies down into another - for example, shifting 900-1000MHz down to 400-500MHz.

Forgetting those specific frequencies, can anyone point me to a place that might have such devices?

I think you will find that most major citys public safety is already
800mhz. I know that most of San Diego County is, and has been for quite
a while... you may want to think about getting 800mhz coverage...

Hi Drew,

That's a very strange frequency pair for Burger King and Taco Bell!

In most cases the 33.400 Mhz frequency is paired with 154.540 Mhz

The frequency that I've seen paired with 154.515 Mhz is 33.160 Mhz.

I've come across several Drive-thru systems in my area that were
operating on the same frequency pairs and were right next door
to each other. They managed to avoid interference by using
diffrent PL Tones (CTCSS).

Are you sure about the 33.400 / 154.515 pair?

These are the confirmed pairs that I'm aware of:

FAST FOOD FREQUENCY PAIRING

* = indicates odd frequency pairing

CUSTOMER CLERK RESTAURANT CHAINS

Subject:
LMR mailing list
Date:
Wed, 22 Jan 1997 22:59:27 -0500
From:
Henrik Rasmussen <rik@vnet.net>
To:
nessman@servtech.com

You need to subscribe using the following instructions:

Here is the info:

submissions should (from now on) go to

lmr@ucsd.edu

and requests to join or leave the list (subscribe or unsubscribe) go to

lmr-request@ucsd.edu

or if you want daily digests instead of individual messages,

lmr-digest-request@ucsd.edu

Turnaround time for messages is usually minutes, although bulk mail like
this gets a lower priority than person-to-person mail, so it may get
delayed sometimes. We deliver over 100,000 messages on a typical day.

The blurb that describes the list when people query our listserver is

>The LMR mailing list is for discussions regarding Land Mobile Radio, or
>more informally, "commercial two-way radio". This includes police,
>fire, EMS dispatch and telemetry, taxicabs, trucking, aircraft radios,
>automatic vehicle location, and pretty much all non-broadcast,
>non-amateur, non-CB radio. Perhaps we could call it 'professional
>radio' without being too far out of line.
>
>For-sale and new product advertisements are NOT welcome.
>
>Rather, emphasis should be placed on technical discussions and the
>other matters that affect the business of running a two-way shop:
>new laws, regulations, band allocations, usage patterns, competition,
>all those things that affect sellers, providers, and users of
>two-way commercial radio. Since this is an international network,
>discussions of how things are in other countries are well in order.
>

>Remember to keep it civil and friendly, please.
>
>It wouldn't hurt to check your spelling and grammar either; there are
>more than a thousand people reading what you write.
>
>Enjoy.
>
>submissions for publication to: lmr@ucsd.edu
>subscription matters, list format: lmr-request@ucsd.edu
>subscription matters, digest format: lmr-digest-request@ucsd.edu

One thing you'll notice is that we do NOT set the headers to force
replies to the list. Depending on your mailer, you'll automatically
reply only to the author unless you select the "reply to all" option
- for example, in the Berkeley MUA, you'd use 'r' to reply to the author
or 'R' to reply to the author and the list.

If you find yourself replying to 'mailfail@ucsd.edu', your mail user
agent is misconfigured and needs to be fixed. 'mailfail' is the error
address where undeliverable mail goes - and it's mostly a bitbucket.

Our list handler software is being revised and will, we hope, soon be
able to filter out administrivia like subscription requests that fools
send to the list instead of the admin address. It doesn't do that yet
but we're actively working on it.

Digests are issued about 4 am Pacific time each day that there has been
any traffic, and additionally whenever 32kb of mail has accumulated.
They'll be archived on host FTP.UCSD.EDU in the /mailarchives directory,
just like all the rest of the digests we issue.

Have fun!
- Brian

See you on the list.

> apartment, or live with it as is.

I live in a townhome... what I did was take a basic ground-plane base antenna from Radio Shack, drilled a 1/8" hole in the center of the ceiling in the closet where I keep my office, and stuck the antenna as far up as it could go, and used whatever was handy to keep it up there. Ran the coax from the antenna, stuffed it in the molding along the floor, and viola... out of sight, out of mind. Works pretty good. Use a little drywall compound to seal up the hole when you move out, which in a closet is hard to detect in the first place.

Technically, you are correct, but if congress puts in a law saying that
you can only worship your God on Sunday, (assuming you are religious)
are you going to consider that law valid, even though you can be arrested
for violating it?

Winfield - I think his address is modified to fool the address collecting bots now running amok. They collect addresses from usenet postings to use for spam mailing lists. Modifying your From:, etc, headers to a bogus address is an effective way of dealing with the problem.

I'm doing it myself after receiving some spam mail that popped up 6 different windows on my tube, each carrying a different inane fancy text message. Enough is enough. Fight the spam bots any way we can.

Just to make things sillier, individual states are allowed to hold
their law enforcers to a higher standard. Therefore, in similar cases
of "plain view", evidence which may be admissable in a Federal trial
would not be admissable in a New York trial.

That doesn't follow. If they could convince a judge to sign a wiretap
warrant, based on probable cause, then any interceptions that they may
have made afterward would have been legal. However, that isn't what
actually happened. The LAPD did not intercept ANY cellular calls.

it will be seen on the horizon
for all to know
the new scanner you lust for
portable handles in tow

it will be held in one's hand
for the first model to show
about six months thereafter
the base model we will then know.

Or maybe three months
if rumor is fact-based
Under 250 american dollars
That too can be erased.

Greetings one and all,

Have you ever lusted to decode Mobile Data Terminal (MDT)
tranmissions? Have you ever wanted to see the same NCIC and motor
vehicle information that law enforcement officers see? Have you ever
wanted to see what officers send to each other over "private"
channels?
And all this with an interface you can build with only a few dollars
worth of parts from your local radio shack?

If so this posting might be your rendevous with destiny. The tail end of this posting includes the source code of a program that decodes and displays MDT messages. It stores roughly 30k of messages in a buffer
and then writes the whole buffer to a file called "data.dat" before terminating. The program may be interrupted at any time by pressing any
key (don't use control-c) at which point it writes the partially filled
buffer to "data.dat". This program only works for systems built by Motorola using the MDC4800 tranmission protocol. This accounts for a large fraction of public service MDT systems as well other private systems.

The existence of this program is ample evidence that Motorola has misrepresented its MDT systems when it marketed them as a secure means of communcications. The interested reader will soon discover that these
systems do not use any form of encryption. Security concerns instead have been dealt with by using a code. "And what might this code be called?" asks the reader. The code turns out to be plain ASCII. What follows is a brief description of how the program and the MDC4800 protocol work. If you don't understand something go to your local library and check out a telecommunications theory book.

1. The raw transmission rate is 4800 baud. The program's interrupt
service routine simply keeps track of the time between transitions. If you're receiving a perfect signal this will be some multiple of 1/4800 seconds which would then give you how many bits were high or low. Since
this is not the best of all possible worlds the program instead does the
following: transitions are used to synchronize a bit clock. One only samples whenever this clock is in the middle of the bit to produce the raw data stream. This greatly reduces jitter effects.

2. Whenever a tranmitter keys up the MDC4800 protocol calls for bit
synchronization (a sequence of 1010101010101010....). In the program this will result in receive bit clock synchronization. There is no need
to specifically look for the bit sync.

3. Look for frame synchronization in raw bit stream so that data frames can be broken apart. Frame synchronization consists of a 40 bit sequence : 0000011100001001001010100100010001101111. If this sequence is
detected (or 35 out of 40 bits match up in the program) the system is idling and the next 112 bit data block is ignored by the program. If the
inverted frame sync is detected one immediately knows that 112 bit

data
blocks will follow.

4. Receive the 112 bit data block and undo the bit interleave.
This
means that one must reorder the bits in the following sequence :
{0,16,
32,48,64,80,96,1,17,33,49,65,81,97,2,18,34,...} if the orignal
sequence
were received as {0,1,2,3,4,5,6,7,8,...}.

5. Check the convolutional error correcting code and count the
number of errors. The error correcting code is rate 1/2 which means we
will be left with 56 data bytes. The encoder is constructed so that
the
output consists of the original data bits interspersed with error
correcting code. The generating polynomial used is :
1 + X^-1 + X^-5 + X^-6
Whenever an error is detected a counter is incremented. An attempt is
made to correct some errors by finding the syndrome and looking for
the
bogus bit.

6. Keep receiving 112 bit data blocks until either a new frame
sync
is found or two consecutive data blocks have an unacceptably large
number of errors.

7. Each data block consists of six data bytes; the last 8 bits
are
status bits that are simply ignored. The program shows the data in two
columns - hexadecimal and ASCII. This data is kept in a buffer and is
written to the file "data.dat" when the program terminates.

8. What the program doesn't do: As a further check on the data
there can be CRC checks. This varies from protocol to protocol so this
program does not implement the CRC checks. Nonetheless, it is a
relatively trivial matter to find the generating polynomial. The
addresses, block counts, and message ID numbers are also quite easy to
deduce.

As you can see, there is no encryption. The bit interleave and the
error
correcting coding are there solely to insure the integrity of the
ASCII
data. Since any moron could have figured this stuff out from scratch
one
could argue that MDTs do not use "...modulation parameters
intentionally
witheld from the public". Therefore the Electronic Communications
Privacy Act may not prohibit receiving MDT tranmissions. However,
consult your attorney to make sure.

The total disregard for security will no doubt annoy countless
Motorola customers who were assured that their MDT systems were
secure.
Since Federal law states that NCIC information must be encrypted your
local law enforcement agency might be forced to spend millions of
dollars to upgrade to a secure MDT system - much to the delight of
Motorola and its stockholders. Cynics might conclude that the release
of
a program like this is timed to coincide with the market saturation of
existing MDT systems.

Also, this program is completely free and it had better stay that
way. What's to prevent you from adapting this into a kit and selling
it
>from classified ads in the back of Nuts and Volts? Nothing. But take a
look at Motorola's patents sometime. You'll notice that this program
does things that are covered by a shitload of patents. So any attempt
to
take financial advantage of this situtation will result in utter
misery.

Please keep the following in mind: this program only works with the
first serial port (COM1). If your mouse or modem is there too bad. If
you don't like this rewrite the program.

What equipment do I need?

RADIO SCANNER:

A scanner that can receive 850-869 MHz. For those of you who
don't
know, this is the band where most business and public service trunked
radio systems can be found along with the mobile data terminal
transmissions. Chances are excellent that if your local authorities
have
a motorola trunked radio system and mobile data terminals that this is
the frequency band in use. Very rarely will one find mobile data
terminals in other frequency bands.

Now for the fun part - your scanner should probably be modified
to
allow you to tap off directly from the discriminator output. If you
wait
until the signal has gone through the radio's internal audio filtering
the waveform will likely be too heavily distorted to be decoded. This
is
exactly the same problem that our friends who like to decode pager
transmissions run into - some of them have claimed they can only
decode
512 baud pager messages using the earphone output of their scanner.
These mobile data terminal messages are 4800 baud so I don't think you
have a snowball's chance in hell without using the discriminator

output.
If you don't know where to begin modifying your scanner you might want
to ask those who monitor pagers how to get the discriminator output
for
your particular radio.

COMPUTER/SCANNER INTERFACE

Those of you who have already built your interface for decoding
pager messages should be able to use that interface without any
further
ado. For those starting from scratch - you might want to check out
packages intended for pager decoding such as PD203 and the interfaces
they describe. The following excerpt gives an example of a decoder
that
should work just fine (lifted out of the PD203 POCSAG pager decoder
shareware documentation):

```
>
> 0.1 uF |\ +12v
> ---||----------------------|- \|
> AF IN | |741 \
> ---- | | /---------------------- Data Out
> | \ ------|+ /| | CTS (pin 5/8)
> | / 100K | |/-12v | or DSR (pin 6/6)
> | \ | |
> GND / ----/\/\/\---- GND ------ GND (pin 7/5)
> | | 100K
> | \ N.B. Pin Numbers for com port are
> GND / given as x/y, where x is for a 25
> \ 10K way, y for a 9 way.
> /
> |
> GND
>
> The above circuit is a Schmitt Trigger, having thresholds of about +/- 1v.
> If such a large threshold is not required, eg for a discriminator output,
> then the level of positive feedback may be reduced by either reducing the
> value of the 10K resistor or by increasing the value of the 100K feedback
> resistor.
>
> The +/- 12v for the op-amp can be derived from unused signals on the COM
> port (gives more like +/- 10v but works fine !):-
>
>
> TxD (2/3) --------------|<------------------------------------ -12v
> | |
> RTS (4/7) --------------|<-------- GND - -
> | | _ + 10uF
> --------->|------- - - |
> Diodes 1N4148 | - + 10uF GND
```

```
> | |
> DTR (20/4) ------------>|------------------------------------ +12v
>
```

If I were building this circuit I would strongly suggest tying the non-inverting (+) input of the op-amp to ground since you are working directly with the discriminator output and don't need a Schmitt trigger.
All these parts or equivalents are easily available (even at your local
Radio Shack which stocks the finest collection of components that have failed the manufacturer's quality control checks and supported by a sales staff that's always got the wrong answers to your questions).

Also: DO NOT use the RI (ring indicator) as an input to the computer.

How do I check things?

As a first step, I would get a package such as PD203 and use it to
decode a few pages. If you can get that working you know that that your
interface circuit is functioning correctly.

If you are in a reasonably sized town you might be part of the ardis network. The ardis network is a nationwide commercial mobile data
terminal network where one can send/receive E-mail messages from one's portable computer. It has been exclusively assigned the frequency of 855.8375 MHz. Therefore, if you can hear digital bursts on this frequency you are basically guarranteed that these are MDC4800 type messages. You should be able to get stuff popping up on your screen although a lot of the messages will not be plain english.

If your interface works but you can't seem to get any messages on the screen for a channel you know is a Motorola MDT system then it might
be possible that your scanner/interface is putting out data with the polarity reversed. To check for this run the program with a command line
arguement. When it runs you should an initial "Polarity reversed" message and hopefully then things will work out for you.

Other than that: if this program doesn't work pester someone else who has got it working. Don't bother pestering the author(s) of this posting; the shit(s) aka "she/he/it (s)" are afraid of a thousand lawyers from Motorola descending like fleas to infest their pubic hair and accordingly have decided to remain forever anonymous. No doubt someone on the usenet who sees this post will know what to do with this
program and also hopefully rewrite into a more user friendly form.

When
you do please don't forget to release the source code.

Future projects/nightmares you might want to think about:

Certain MDT systems embed formatting information in the text in
the
form of ESC plus [plus a few more bytes. Someone might want to decode
these on the fly and format the output so it looks exactly the same
way
as the user sees it.

Make it so that this program works with com ports other than
COM1.

Make it user friendly?

Enlarge the data buffer from the current 30k.

Give the output data file an unique name each time the program is
run instead of "data.dat".

How about sorting through the past traffic so that you only see
traffic to a specified user?

The program does not cut data blocks off in the display but it
might add an extra one or two (which will display as all zeroes).
Someone might want to make all those zeroes be shown as blanks
instead.

Write some real instructions.

Now the more ambitous stuff:

Are you half-way competent with RF engineering? Then listen in to
the tranmissions from the mobile units back to the base station. That
way you get everyone's password and user IDs as they log on to the MDT
system. By this point you will no doubt have been able to figure out
all
of the appropriate communications protocols so you should think about
getting your own transmitter up and running along with the necessary
program modifications so that you can transmit MDT messages. The
required transmitter can be very simple - for example, those masocists
who want to start from scratch might want to special order an
appropriate crystal (pulling the frequency with the computer's tranmit
signal), building a frequency multiplier chain, and adding a one watt
RF
amplifier to top it all off (see the appropriate ARRL publications for
more information on radio techniques). Now you can log in and look at
the criminal records and motor vehicle information on anybody you can
think of. Find out what your neigbors are hiding. Find out who that
asshole was that cut you off downtown. Find out where your former

girl/boy friend is trying to hide from you. And on and on...
Those with simpler tastes might want to simply transmit at the
base
station's frequency to any nearby MDT terminal - now you too can
dispatch your local law enforcement agencies at the touch of your
fingers!!! See your tax dollars at work tearing apart every seam of
your
neighbor's house. Or create strife and dissension in your local law
enforcement agency as more and more officers come out of the closet
using their MDTs trying to pick up fellow officers.

There are municipalities that have put GPS receivers on all of
their vehicles. Should it happen that the information is sent back
over
one of these networks you could have your computer give you a
real-time
map showing the position of every vehicle and how far away they are
from
you.

Extend your knowledge to other data networks. Here you will want
to
look at the RAM mobile data network. It uses the MOBITEX protocol
which
is really easy to find information on. Since it is an 8 kilobaud GMSK
signal there is a decent chance that you can use the interface
described
here. This transmission mode demmands much more from your equipment
than
MDT tranmissions. At the very least you must be much more careful to
make sure you have adequate low frequency response. Despite this it is
possible to receive and decode MOBITEX transmissions with a simple
op-amp circuit! This just goes to show you what drivelling bullshit
RAM's homepage is filled with - they explain in great detail how
hackers
will never be able to intercept user's radio tranmissions
(incidentally
explaining how to decode their tranmissions). The necessary program
will
be the proverbial exercise left for the reader. For better performance
buy a dedicated MOBITEX modem chip and hook it up to your computer.

A few words about the program:

Remember - you must have your decoder hooked up to COM1. The RTS
line will be positive and the DTR line negative but if you built the
decoder with a bridge rectifier you really don't have to worry about
their polarity. Stop the program by punching any key; don't use
control-c or control-break!

If you must reverse polarity run the program with any command
line
arguement (example: type in "mdt x" at the command line if your
program
is mdt.exe). You should then see the "Polarity Reversed." message pop
up
and hopefully things will then work.

As far as compiling this - save the latter portion of this
posting
(the program listing) and feed it to a C compiler. Pretty much any C
compiler from Borland should work. If you (Heaven Forbid) use a
Microsoft C compiler you might need to rename some calls such as
outport. Follow any special instructions for programs using their own
interrupt service routines. This program is not object oriented. It
also
does not want anything whatsoever to do with Windows. Please don't
even
think about running this program under Windows. Finally, here it is:

Good Luck and may God be with you!

---------- C u t H e r e ! ! !

/* start of program listing */

```
#include <stdio.h>
#include <conio.h>
#include <dos.h>
#include <math.h>

/* Purpose of program: receive messages using the Motorola MDC4800
*/
/* protocol and show them on the screen
*/
/*
*/
/* WARNING TO ALL : This program is free. Please distribute and
modify*/
/* this program. I only request that you always include the source
*/
/* code so that others may also learn and add improvements. The
*/
/* status of this program at the time of the original release is :
*/
/* it doesn't have much in the way of a user interface or options but
*/
/* it should work if you follow the procedure in the text file. Don't
*/
/* expect any sort of support (you get what you pay for - nothing in
*/
/* this case). Finally, here's a special message to all of you who
```

```
*/
/* might have the urge to try to make money with this information:
*/
/* I know where you live. I will shave your pets and pour rubbing
*/
/* alcohol all over them (unless said pet happens to be a
Rottweiler).*/
/* I will have sex with your wife while you off at work; on the rare
*/
/* occasions when you have sex with your wife she will in the throes
*/
/* of passion cry not your name but mine. I will sell drugs to the
*/
/* demented spawn you refer to as your children. And if that's not
*/
/* enough for you let a thousand lawyers from motorola descend on you
*/
/* and pound your fat rear end so far into the ground that it finally
*/
/* sees daylight again somewhere in Australia.
*/
/*
*/
/*
*/
/* General tidbits (a few of those "Why were things done this way
*/
/* questions).
*/
/* 1. Why is captured data kept in an array and only written to a
*/
/* disk file at the very end? Because disk access seems unreliable
*/
/* when so much time is taken up by the background interrupt service
*/
/* routine.
*/
/* 2. Why is the array storing this so small? Because yours truly was
*/
/* too damn lazy to use a pointer and allocate a huge chunk of
memory.*/
/* (Hint for those of you who would like to improve this.
*/
/*--------------------------------------------------------------------*/

Help.. I need the road freqs. used by NJ, Del and Maryland police on the I-95 corridor. I am taking a trip down there this week and would like to monitor police activity along the way.

Thanks.

the 890xlt is junk. over hyped and under-sensitive.
lousy reception in the uhf bands...just does not pick
out 460's or 488's or 489'etc. Lousy is a suface-explanation.

it's not too good in 800 either....it's ok, but too many
conversations are missed ... my 760 xlt does not miss on
any or the RS 2026 does great too...more sensitive than
the BC 890

if you are going to be "non-antenna" outside, then contact
grove Enterprises on their 800 number, they have WWW site,
and you can buy some great INDOOR antenna's that really
work.....plus you can buy antenna's that "suction" affix
to windows....

Get the Grove Catalog....Bob can help you. His prices
are lower than Scanner World most of the time...don't
forget ACE communications ...they have an 800 number.

Scanner World has an 800 number and 800 info can get it
for you.....

the 890xlt I call the LIMP LIZARD.

bill
etc.

Well the Bear Tracker (uniden), has police, fire, emergency freqx stored into
memory. You can be in any state (I think), and it searches for the local
police, fire, etc. Just tell it what state you're in and it does the rest.
You can program it though, it's pre-programmed, but still it's handy to have
when your on the road.

2778. Newt - Meet Bob Grove

Newsgroup: rec.radio.scanner
Date: 1997-01-22 00:00:00 UTC
From: Les Wilson <nessman@servtech.com>
Message-ID: <32E5CC73.6772@servtech.com>
Source record: 210593
Cross-posted to: rec.radio.scanner,alt.radio.scanner

This was in the Jan. 20th edition of the Rochester Democrat & Chronicle,
Business section:

NO MORE PRIVATE CALLS

Newt, meet Bob Grove. This North Carolina entrepreneur modifies radio
scanners to pick up cellular phone conversations. Some may say that's
illegal, but Grove disagrees. He insists that he is within the bounds
of the law and federal regulations because his company, Grove
Enterprises, Inc., neither sells nor markets altered scanners -- he only
modifies scanners that people already own. It's a distinction that
lawyers will surely be happy to argue about for years.

My outdated "Police Call" lists 171.3375 as, "unofficially", Army and Soil Conservation Service. It may also be used by some law enforcement agency. The National Park Service and the Forest Service use frequencies in that general area.

As far as the law is concerned, "blue cards" do not exist. At the most,
they are use to solicit a "professional courtesy" in the event you are
pulled over by a police officer, and if he decides to make an issue of
your scanner radio.

In Canada we are allowed to listen to cells as the airwaves are not private property up here. No one owns a part of the radio spectrum, we just have to pay a licencing fee to use it :) Anyhow if you are interested in people then try listening to cells. They are very interesting. Some calls are boring, some stupid, some funny, some rude, etc. When I'm bored of listening to the local police, fire dept, etc I tune into the cell band. (Of course I usually tune into McPukes when I drive by and I've even hooked my scanner up to my cable vision so maybe I'm not normal anyhow ;))

They are all here, courtesy of the SC Sheriffs office. Print it
out and keep it handy:

http://www.amdahl.com/ext/scc-so/sccfreq.html

The city of Santa Clara is all trunked (simple system - no
buzzsaws). However, the fire department is now simulcasting the
fire channels on their old VHF fequencies (I'm guessing this is
for the benefit of their volunteer/off duty personnel).

Santa Clara Fire VHF simulcast channels:

"Fire 1" 153.965 (Dispatch)
"Fire 2" 153.440 (secondary)

FYI: San Jose Fires' primary channel is also used "up there" by
South San Francisco/Colma/Brisbane, and the signal is fairly
strong down here.

I tuned in all of the NYCFD frequencies last night and received very good signals from the Bronx and Queens. The special PD Freq (bomb disposal and such was also very active and easily listened to) My house is in CT (Upper Fairfield county) approx 60 miles to NYC. The reception has been very good. Thanks for all your comments and help.

There is a program called "inverse" which supposedly does this via
your soundcard. It is one one of the ham radio ftp sites (ftp.funet.fi
I think.) I haven't had a chance to try it yet.

2795. modifying PRO-51 with newer date codes

Is there any modifications that can be performed to a Radio Shack PRO-51 with a newer date code, it's only just over a year old.

I tried the method of pressing 2 certain keys while turning on the power but it apparently only will get you the cell freqs on older units.

Thanks Mike D

Around here, and ordinary scanner can hear celluar calls as they are not scrambled in any form. I have a scanner that supposedly has celluar locked out (Pro-46) but they did not lock out the 900 meg image signals! Also my old tv set gets channel 82 (base side of celluar), and sometimes I can hear some clear signals out of the mess of signals on there! The equipment is not illegal, just illegal to talk about listening! Prosecution depends solely on "self-incrimination", don't talk and they can't touch you!

There is a program called inverse.zip that you can get from ftp sites.
This supposedly uses a sound card to descramble. I'm not sure if it
does it in real time or if it only works on wav files

: buddies from the Dome Light Pub, and keep you company without the
: permission of the judge?

This is probably a debatable point of law. With a CB *license*,
the station is subject to "inspection" at any time.
Same with Ham license.

But considering that CB is a license-free service, you and your lawyer
might be able to sue for damages in a wrongful-invasion suit against the
Feds.

Unless of course they incinerate the place and kill you in order to
conceal evidence..... er, I mean, "send a message."

Chris,

Try this site here:

http://www.perconcorp.com

They have a database that is about 6mos old, but should of much more
help than Bill here is willing to offer.

This stuff will all be online soon enough just like everything else
and those scanner books will be a thing of the past.

Boy, sounds like Kentucky is pretty strict on scanning laws. I'll be
living just right over the TN/KY line, but spending most of my time in
TN. BTW, does anyone know if there are any type of scanner restrictions
on military bases? My fiancee is at Fort Campbell, which is where I'll
be going.

I second that view.

A perfect comparison is "America's Funniest Videos". Some amazingly
improbable things appear on that show. Consider how many video cameras
must be running at any one time, recording mundane events, for those
fantastically unlikely events to be captured on tape.

There must be a lot of scanners & tape recorders running...supported by
the fact that this is a _busy_ newsgroup...

Glenn,

Come on, knock it off. You're too sharp to engage in this kind of petty bickering. OK, so Harold did promo an upcoming issue a little. What's so bad about that? There may be a few folks on here that aren't regular readers of PopCom that will appreciate the "heads up" about when more info will be available.

As for "rumors and droppings," while there has been much good info posted there has been some conflicting posts as well. No, I can't cite specifics, it's been a week or two and I don't remember who posted them, just that they happened.

Sure, it would've been nice if Harold had posted the entire text of Uniden's press release on the TrunkTracker. I imagine he just didn't think about it. But then, I haven't seen any of MT's folks post it, either.

Now, to be fair, for those who don't already know, yes, I did write the scanning column in PopCom for a year, and yes, I do have a feature article in the Feb. issue, and yes, I'm going to be doing the in-depth evaluation of the TrunkTracker for the April issue (that actually comes out in March, and for which the deadline is Feb. 20), so I'm not totally unbiased here.

BTW, just so you don't criticize me for not posting the entire Uniden press release, I can't, I haven't seen it myself.

Come on folks, lets stop all the petty bickering on this topic and other. If you have a disagreement with someone, fine. But lets keep it good natured. After all, if ANY of us need something to complain about, all we have to do is look in a mirror.

John

I don't know if you get the catalog "Galls" but they make a great mount
for portable scanners, radios, etc. I just bought one for my Sportcat
150, and really like it. The deal mounts on your floor board or somewhere
solid, and secures your handheld with a rubber cushioned grips. It sells
for 24.95 + shipping. Thier # is 1-800-477-7766 and you can call and
request a catalog.

1. Harold says it wasn't a promo which says something about motive, guilt
and character.
2. I see a difference between John PopComm Subscriber saying "Hey, check
out the great
article in PopComm on the UnidenTT and Harold using Usenet for ads. Don't
you??

> As for "rumors and droppings," while there has been much good info posted
> there has been some conflicting posts as well. No, I can't cite
specifics,
> it's been a week or two and I don't remember who posted them, just that

No argument there. The thing that really rubbed me wrong is Harold bringing
it up they way
he did and never seeing him sharing information to correct the bad info.

> Sure, it would've been nice if Harold had posted the entire text of
> Uniden's press release on the TrunkTracker. I imagine he just didn't
think
> about it. But then, I haven't seen any of MT's folks post it, either.

Harold posted NOTHING about the Uniden TT except the two model numbers
and the fact PopComm would run pictures and publish Uniden's press release.
Concerning the MT folks, they also have not been posting messages saying
they
know about it but you have to read MT to find out. I still stand by my
challenge
to compare contributions made by PopComm staff in comparison to those made
by
MT staff on this newsgroup.

> Now, to be fair, for those who don't already know, yes, I did write the
> scanning column in PopCom for a year, and yes, I do have a feature

March,
> and for which the deadline is Feb. 20), so I'm not totally unbiased here.

You seem honest and up front though....no hidden motive. Unless I missed it
you
haven't been posting "I have information but won't share it, read PopComm
if you
want it"

>
> BTW, just so you don't criticize me for not posting the entire Uniden
> press release, I can't, I haven't seen it myself.

I didn't expect Harold to post the entire Uniden press release either. I
did feel that if
he wasn't going to share any information he doesn't have the right to;

1. Make judgment on the content of other users messages when he adds
nothing himself and
allows information to be posted that is false without trying to correct
it.
2. Uses r.r.s. for nothing other than promoting the sales of PopComm

> Come on folks, lets stop all the petty bickering on this topic and other.
> If you have a disagreement with someone, fine. But lets keep it good
> natured. After all, if ANY of us need something to complain about, all we
> have to do is look in a mirror.

I was only answering the false claims made by Harold. He opened the doors
when he
started passing judgment on the posts of people trying to share information
that he
seems to feel he can only sell to tell.

What part of Utah are you interested in? The mountains make it
difficult to listen to distant areas.

For general purpose hobby scanning, get the Uniden BC9000XLT (Base)
or 3000XLT (hand held).

Hello

Does anybody know of a good base scanner I'm looking for one that has
25MHz-1300MHz or more. Around $500. I know about
BC9000XLT and RadioShacks but was wondering about others.
and also does has anybody ever ordered a Scanner from UK. I'm thinking
about getting an AOR AR8000. From the web page I have seen it says they are
only USD75. Is that $75. It just doesn't seem right for the type of
scanner. 500-1900 etc.

Who sells the BC9000xlt?
So far I just know of Online Mail-Order Company's.

Also, If any one knows of Hamfests around the Akron area Let me know (OHIO)

Thanx,
Jay

P.S. Please Mail reply with post.

Cruising around East Orlando this afternoon, I noticed something unusual. Taco Bell and Burger King, directly across the street from each other, using the exact same pair of frequencies: 33.400 customer AND the relatively "rare" 154.515 clerk. The interference was hellacious! You could hear heterodyne from the other restaurant when directly in front of each drive-thru speaker. On the road in between, we're talking 30+ db of unintelligeable noise!

Anyone else found a location like this?

Here in Houston we (the Police dept) use Code 1. Code 2 is a fast, but non-emergency, response. Code 3 is a typical response. We also have Code 4, 5, and 6 calls, but they refer to priority over other calls and not "response priority" per se. "Running hot" is also commonly used, but I don't know if it is official or we have just kept it around ourselves. To make matters more interesting, the Fire dept uses exactly the opposite, Code 3 is lights + sirens, Code 1 is regualr response. I note that they run all their calls with lights and siren, and only ambulances can transport to a hospital Code 1, then only with a Dr's aproval.

Well, I might be able to help you with that. Make sure you have your
EMS memory manager installed in config.sys, and make sure it isn't set
for NO EMS (that's the default way it'll be with Windows). Just delete
the NO EMS from the line and reboot.

We agree...

In California v. Ciraolo, the court ruled that a person did not have a reasonable expectation of privacy from an aircraft above because overflights are common today... How many scanners are out there? How many publications have printed the cellular mods for these scanners? How many books has Cheek sold? How many posts do we see asking "How can I fix my scanner to recieve cellular?" How many are responded to with the proper info? How many pre-85 UHF tv's are out there? I'd say that is possible that it is very common today that "overflights" of the cell frequencies routinely occur.

Better use a different server. Cornell's is dated 1/24/94 and is
not the current version.

>OK, so this is the law. Sorry, missed your point.

Not anymore.

It is missing the following changes:

CITE 18 USC Sec. 2511 01/03/95
[...]
MISC2 AMENDMENTS
1994 - Par. (1)(e). Pub. L. 103-322, Sec. 320901, added par.
(1)(e).
Par. (2)(a)(i). Pub. L. 103-414, Sec. 205, inserted ''or
electronic'' after ''transmission of a wire''.
Par. (4)(b). Pub. L. 103-414, Sec. 204, in introductory
provisions substituted '', encrypted, or transmitted using
modulation techniques the essential parameters of which have been
withheld from the public with the intention of preserving the
privacy of such communication, then'' for ''or encrypted, then''.
Par. (4)(b)(i). Pub. L. 103-414, Sec. 202(b)(1), inserted ''a
cordless telephone communication that is transmitted between the
cordless telephone handset and the base unit,'' after ''cellular
telephone communication,''.
Par. (4)(b)(ii). Pub. L. 103-414, Sec. 202(b)(2), inserted ''a
cordless telephone communication that is transmitted between the
cordless telephone handset and the base unit,'' after ''cellular
telephone communication,''.
Pub. L. 103-322, Sec. 330016(1)(G), substituted ''fined under
this title'' for ''fined not more than $500''.
1986 - Pub. L. 99-508, Sec. 101(c)(1)(A), substituted ''wire,
oral, or electronic'' for ''wire or oral'' in section catchline.
Par. (1). Pub. L. 99-508, Sec. 101(c)(1)(A), (d)(1), (f)((1)),
substituted ''intentionally'' for ''willfully'' in subpars. (a) to
(d) and ''wire, oral, or electronic' for ''wire or oral'' wherever
appearing in subpars. (a), (c), and (d), and in concluding
provisions substituted ''shall be punished as provided in
subsection (4) or shall be subject to suit as provided in
subsection (5)'' for ''shall be fined not more than $10,000 or
imprisoned not more than five years, or both''.

Par. (2)(a)(i). Pub. L. 99-508, Sec. 101(c)(5), substituted ''a provider of wire or electronic communication service'' for ''any communication common carrier'' and ''of the provider of that service, except that a provider of wire communication service to the public'' for ''of the carrier of such communication: Provided, That said communication common carriers''.
Par. (2)(a)(ii). Pub. L. 99-508, Sec. 101(b)(1), (c)(1)(A), (6), substituted ''providers of wire or electronic communication service'' for ''communication common carriers'', ''wire, oral, or electronic'' for ''wire or oral'', ''if such provider'' for ''if the common carrier'', ''provider of wire or electronic communication service'' for ''communication common carrier'' wherever appearing, ''such disclosure'' for ''violation of this subparagraph by a communication common carrier or an officer, employee, or agent thereof'', ''render such person liable'' for ''render the carrier liable'', and ''a court order or certification under this chapter'' for ''an order or certification under this subparagraph'' in two places.
Par. (2)(b). Pub. L. 99-508, Sec. 101(c)(1)(B), inserted ''or electronic'' after ''wire''.
Par. (2)(c). Pub. L. 99-508, Sec. 101(c)(1)(A), substituted ''wire, oral, or electronic'' for ''wire or oral''.
Par. (2)(d). Pub. L. 99-508, Sec. 101(b)(2), (c)(1)(A), substituted ''wire, oral, or electronic'' for ''wire or oral'' and struck out ''or for the purpose of committing any other injurious act'' after ''of any State''.
Par. (2)(f). Pub. L. 99-508, Sec. 101(b)(3), inserted ''or chapter 121'' in two places and substituted ''foreign communications, or foreign intelligence activities conducted in accordance with otherwise applicable Federal law involving a foreign electronic communications system, utilizing a means'' for ''foreign communications by a means''.
Par. (2)(g), (h). Pub. L. 99-508, Sec. 101(b)(4), added subpars. (g) and (h).
Par. (3). Pub. L. 99-508, Sec. 102, added par. (3).
Pars. (4), (5). Pub. L. 99-508, Sec. 101(d)(2), added pars. (4) and (5).
1984 - Par. (2)(e). Pub. L. 98-549, Sec. 6(b)(2)(A), substituted ''section 705 or 706'' for ''section 605 or 606''.
Par. (2)(f). Pub. L. 98-549, Sec. 6(b)(2)(B), substituted ''section 705'' for ''section 605''.
1978 - Par. (2)(a)(ii). Pub. L. 95-511, Sec. 201(a), substituted provisions authorizing communication common carriers etc., to provide information to designated persons, prohibiting disclosure of intercepted information, and rendering violators civilly liable for provision exempting communication common carriers from criminality for giving information to designated officers.
Par. (2)(e), (f). Pub. L. 95-511, Sec. 201(b), added par. (2)(e) and (f).
Par. (3). Pub. L. 95-511, Sec. 201(c), struck out par. (3) which

provided that nothing in this chapter or section 605 of title 47 limited the President's constitutional power to gather necessary intelligence to protect the national security and stated the conditions necessary for the reception into evidence and disclosure of communications intercepted by the President.
1970 - Par. (2)(a). Pub. L. 91-358 designated existing provisions as cl. (i) and added cl. (ii).

I did, didn't I? That's because that is the word the law uses.

> Or does it apply to a cordless phone owner who picks up his phone
> to use it, only to accidently discover [and listen to] a neighbor
> on the same frequency?

No acronyms this time... I AM NOT A LAWYER... but I can read the
law, and the law also says:

2511 (2) (g) It shall not be unlawful under this chapter
or chapter 121 of this title for any person;

(v) for other users of the same frequency to intercept
any radio communications made through a system that
utilizes frequencies monitored [...]

Of course, the above is copied from title 18 prior to 1994... To be
absolutely sure, check the most recent version.

Thursday, January 23, 1997 - 22:16:39 MET

I experienced the same problem you have, living in
a 2nd story urban apartment until a kind soul shared
his apartment antenna solution. It works a helluva
lot better than my mag mount.

Find some of that old TV antenna lead-in cable(you know
,the brown plastic covered, 2 wire stuff that used
to be on top of your roof leading to your TV).Using
the formula of:

984/F (MHZ) X .95 /4 where 984 is divided by F= Frequency
in MHZ (984 represents the speed of light) multiply
the result by .95 (this accounts for the coax line,
more on that in a moment) then divide that answer by 4. (this is
for a 1/4 wave,divide by 2 for 1/2 wave or not at
all for a full wave length. For general monitoring
figure the wavelenght for the center of your favorite
band. For instance if you listen to VHF high band
add 155 and 160 together (315) and divide by 2 (nominal
157.5) This is the frequency you should figure for in
the above formula.At one end of the wire, strip
the plastic off and twist the 2 wires together
(About an inch and a half). about an inch above where you
twisted the wires, solder a 10 foot lenght (or longer if deired, but
keep it to a minimum) of RG 58 (or better) COAX.Connect a BNC or
Motorola connector to the other end of the COAX.
Hang this antenna vertically outside the window.
This cheap antenna will almost certainly outperform
any mag mount antenna.Hope it helps.
Take it easy

2858. Police radio & my security light???

Newsgroup: rec.radio.scanner
Date: 1997-01-23 00:00:00 UTC
From: Brad Sagarin <bsagarin@apocalypse.org>
Message-ID: <32E83D23.46D9@apocalypse.org>
Source record: 210371

Greetings, all. This post is not strictly a scanner issue, but I couldn't think of a better newsgroup to ask regarding the following strange phenomenon.

I have a security light that covers the vicinity of my apartment porch. Beyond that, the security light sensor doesn't register movement or heat (which, the accompanying instructions read, are what the sensor senses.) Yet if a police patrol unit pulls up on the adjacent street (which is perhaps 15-20 yards away, much further than the 4 yard span of my porch) the security light will go berzerk, flashing repeatedly. I can't tell you how many times it has awakened me, and the only thing I find unusual is the existance of a patrol car.

Last night, at 3 am, the light started going crazy again. Sure enough, there was the cop sitting across the street. So I got up and asked him if he knew why police cars set off my security light. He of course had no idea. I asked him if he was using his radio, and he said yes. Then it suddenly dawned on me that the flashing of my security light wasn't regular, but haphazard, as the transmissions from a police radio might be.

My question to you is:

Is it possible my security light is acting as a police radio scanner??? How could this be, if the sensor is supposed to sense movement and heat?

I'm on a friend's computer, so would you please respond to the following email:

kelton@asu.edu

Thanks!

Yes, the frequencies are:

856.9625
857.9625
858.9625
859.9625
860.9625

Don't forget to keep an eye on the older frequencies in the 150- and
460-MHz range; they are still active to some degree at times.

Subject: Re: scanner
stuff
Status: RO

Just another note , today I bought a modifiable PRO 2006.
So there are still
some left. On the other hand, there are hardly any PRO
2030's left that are
modifiable. The new PRO 2030's must have a new micr
oprocessor or firmware
because the RF choke (L201) is missing from the current
models. This is the
choke which is to be removed for continuous 800MHz
reception

:-> PAJ

Modification to restore cellular frequencies in the Radio Shack PRO-2030

Scanner.

This mod is essentially the same as the PRO2026 except the
location of the
jumper is slightly different.

1. Remove power
cable.
2. Turn unit upside down.
3. Remove five
(5) recessed screws from bottom panel.

4. Carefully remove bottom
panel.
5. With display panel facing you, locate the jumper marked L201 on
the
circuit board attached to the display. It will be about

2" in from the from and 2" in from the right side. It will loo
k
like a RF coil.
6. Cut the jumper marked L201.
7.
Reinstall the bottom and reconnect power. Scanner is ready for use.
8.
Cellular frequencies are now restored with 30 Khz channel spacing.

Please note: I picked up this mod from the FIDO net. I have never

completed the mod myself because I own the 2006. But I do have the

service manual and this is the diode that locks out the cellular band.

Even the specs show this diode connected to pin 10 of the microprocessor.

This pin is the STRAP OPTION CELLULAR SKIP. Too easy!

2866. Canadian Scanner Companies

Depends on how diligent you want to be. Military Air operations,
Government Air, and some clandestine comms are to be heard, but you
won't get the constant chatter like the PS bands. Anyone that is
semi-serious about staying informed should have at least one unit that
will recieve Mil bands.

Mark

The truth as I perceive it to be.
Your perception will be different.

>>> bikini photos of Princess Di...

No, it's not different. They're both trespasses, both violations
of privacy.

>>> The radio waves are public property and

No. The radio waves were stolen by the government from their
rightful owners.

>>> you have a right to record physical phenomena.

Yes, but you don't have a right to record and disseminate
information about other people.

>>> Radio transmitions come onto my property, and into my home.
>>> I Recieve them, I do not "intercept" them. If you want privacy,
>>> SCRAMBLE what you BROADCAST.

Radio trnasmissions come through you. You intercept some of them.

Encrypting them is a good idea, though. There's a market there
for strongly encrypted cellular and portable phones, and the
abusive regime in government are actively fighting against its
development.

2869. Gingrich--missed opportunity

Newsgroup: rec.radio.scanner
Date: 1997-01-23 00:00:00 UTC
From: Jane Robinson <jrob@nettally.com>
Message-ID: <32E71672.FEA@nettally.com>
Source record: 210382

Radio Shack is missing a bet. Inmagine--right in the middle of the Super Bowl--here comes a commercial
starring the Cleaver couple from Florida, holding up their "right out of the box" radio from Radio Shack and a small tape recorder--"Yes, you too can become a part of history with our neato scanner! Just drive around your neighborhood and listen for familiar voices!"

question? How many of us would even recognize the voices of ANY of the characters on the phone call?
How many of us would TURN ON the tape recorder when several anonymous male voices began to talk? (I'd wait til it was over to press the button.)

Does any body know what model scanner it was? I think I'd like to buy one.

Meanwhile, if we'd all shut up and quit talking about it--let the story die. Nothing will happen to anyone--and no one will fiddle further with the laws. Congress knows its a silly unenforceable law--don't press their hand on it. Anything they try to do (to save face) is going to be worse--count on it! Gingrich sure doesn't want to hear any more about it.

Let the air clear and keep quiet.

I agree with Carl. I happen to find anything having to do with AOR or Yupeteri (sp) scanners disinteresting, because I don't have them. I wouldn't ask people to stop discussing them, however... No one forces people to read netnews. If you don't like it, don't read it....

->since it's against the law) and checking the weather. At least, in New
->York I would think it'd be that way...
->
->--
- Well, that's not entirely true. Some things you can hear below 800 MHz are:
FEDERAL: Including- DEA, FBI, ATF, Customs, INS, U.S. Marshalls, USSS etc.
MARINE: Including Coast Guard
CIVILIAN AIR
VHF EMERGENCY
TV/MEDIA
NYC POLICE (since you mentioned NY)

There has got to be at least SOME interesting listening among these right?
By all means get an 800 MHz equipt scanner, and, 225-400 MHz mil-air too,
but that is certainly not all there is out there. IMHO.
Have fun,
Phil

In Pleasanton "code 1" is a request to respond on the radio. Its the equivalant of saying "please answer" or "clean out your ears and answer up!". I usually only hear the dispatcher use it when the normal terminology doesn't appear to be getting the unit's attention.

Clint....do you own or have you ever used a radar detector? Have you ever just kinda slowed down at a stop sign? Many scanners built before the "ban" on those frequencies existed were built and sold legally to the public....are those people guilty of crimes now? Have you ever heard of a "Grandfather Clause" ? Plus...it is illegal to record such phone calls....I'm not sure about listening. If it actually is illegal to listen then I would question the intelligence quotient of the idiots that made the law....it's really enforcable isn't it?

I bought one of Donald's AR2700/8000 interface kits last year. I fully
endorse this product. All of the parts in the kit are top notch and the
instructions are well thought out. I had no trouble putting mine together
and it worked the first time I plugged it in. If you can read instructions
and use a soldering pencil, you can put this kit together.

Cheers

Message-ID: <19970123194401.OAA11478@ladder01.news.aol.com>
Source record: 210436

I've seen several posts debating the merits of different antennas and coax. I primarily listen to the 150's, 460's, and 800's. I would like some recommendations on antennas for both handheld and base uses.

I have heard about an antenna with a ball joint at the BNC connector that also extends. Could I open this antenna to different lengths to "tune" it for different frequencies? If so, what length(s) should it be?

Thanks for any input.

2888. FS> Yupiteru MVT-7100

Newsgroup: rec.radio.scanner
Date: 1997-01-23 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5c8efn$i4k@coranto.ucs.mun.ca>
Source record: 210437

For Sale:

European Yupiteru MVT-7100 handheld scanner with the following features:

* 1000 channels
* Frequency coverage from 530kHz to 1650MHz, including FULL 800 MHz.
* AM/FM/WFM/LSB&USB receiving modes
* Tuning steps as low as 50Hz.
* Selectable attenuator.
* lockout on scan and search, etc.
* Many, many more features.
* includes US power supply..

Price $475 o.n.o. plus shipping.

European model CAMNIS HSC-050 Ultra Wide Band Scanner.

Scanner covers 100 kHz - 2.06 GHz with NO Gaps and includes CELL.
Some other features of the high-end scanner are:

- Selectable AM/NFM/WFM/SSB and CW modes.
- Triple Superhetrodyne Receiver Design.
- Programmable Search Step Rates of 1kHz to 999kHz.
- 10 Linkable Scan Banks of 100 Channels (1000 Channels TOTAL).
- 10 Linkable Search Banks with independent stepping rates and modes.
- Frequency Lockout in Scan or Search modes.
- Programmable Priority Channel
- Non-volatile memory EEPROM (needs NO batteries to backup memory)
- Uses 4 Nicad batteries (AA type) or an external 12 volt source
(cigarette lighter, wall adaptor, etc).
- Switchable Backlite multifunction display.
- Bargraph Signal Strength Meter.
- Selectable 10 db attenuator.
- Channel/Frequency knob and up/down buttons
- Keyboard lock.
- Dual speed Scan/Search Rate.
- Special HOLD mode for Searching.

Not much on the market that has the same frequency range and features
especial in a portable handheld unit. I have the original box with
owners manual. Scanner is in excellent condition.

Price $450 o.n.o. plus shipping.

May consider trades of one or both scanner toward an ICOM R7100
or similar type desktop scanner.

When the PL-259 connector was first introduced, the so-called
UHF portion of the spectrum started at 30 MHz.

The PL-259 is probably OK for most applications up to 200
MHz or so, but above that it can introduce significant
signal degradation.

Message-ID: <32E7D9AB.5950@whoi.edu>
Source record: 210440
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Just out of curiosity, does anyone know if it's possible to use the OS535 combined with the Optolinx interface and the CI-V port on the OS535 to get data slicing off of the RS2042?

I also have a AR8000 so I'll probably be getting the optolinx anyway, but it would be rather handy if I could get some of the dataslicing from the RS2042 as well...

Or is it possible to do this from the OS535 anyway?

Scott

Ohhh, those things have proms you can replace?? Thats different. I thought the program was masked onto the microprocessor itself.

Well yes. I was really only talking about cellular in my previous comments. Cordless are wide open (unless you have a digital like me).

Really!???! I thought that was pretty much a dead horse. Is anybody working on digital cellular? I would think that a dsp taped into the IF output of your receiver should be able to decode it.

Yes, they are sandwiched in between the GMRS channels, 12.5 KHz spacing,
and yes, they are going to cause interferance to and from active channels next
to them. You do not, however, need any "permission" from adjacent channel
GMRS systems to use these Family Channels. Apparently the FCC, in their
Government wisdom, doesn't think this will cause any problems.

Hi Randy,

These are the frequencies for Taco Bell nation wide:

RESTAURANT CUSTOMER (R) CLERK (I)

Taco Bell 30.8400 154.5700
31.0000 170.3050
33.1600 154.5150
33.4000 154.5400
457.5375 468.3875
457.5500 467.7750
460.8875 465.8875
461.0375 466.0375
461.0875 466.0875
461.5375 466.5375
464.9625 469.9625
469.0125 464.0125
469.2125 464.2125

The most common frequency for Taco Bell is 33.400/154.540

> out? I live in Walled Lake , Michigan if that helps.

Don,
My guess is that you have a dual-conversion scanner and
are picking up an image of a strong signal near you from
a local 440Mhz amateur radio repeater.
Taking your police frequency of 465.1 and subtracting
2 times the IF of your radio(I'll assume it's 10.7) you
get 465.1 - (2 * 10.7) = 443.7 which is the frequency you
are hearing which is smack in the middle of the 440 ham
range. If your scanner can get this range, try scanning
440 - 450MHz and see if you pick up the same conversation.
Since you are hearing it clear and do not detect a
second conversation, we'll assume it's not two strong
frequencies mixing together in your front end to produce
a third(i.e. intermod).
Two immediate, but probably not feasible, solutions
1. If you are using a dual-conversion radio, swap it for
a triple-conversion unit.
2. If your police are using a PL tone, you can use a
CTCSS-capable scanner to only let the police comms
through.
Another solution would be to try and find or build a filter
that rejects the 440 band or rejects anything below 450MHz or
so. I'm not sure that this is much more feasible than the
above two options either!

Hi,

I was playing around with my Pro26 handheld today, and set it to the cordless phone (not cellular) freqs and noticed that they sounded really muddy, totally unhearable...this from listening to my own cordless phone in my house, using it as a test.

I also own a Bearcat 890xlt, and it can monitor the phone in the house just fine.

I have never used the pro26 to listen to cordless phone freqs, so was this just because my cordless phone was to close (standing right beside each other), and the bearcat can just handle this? Or are the pro's blocked for this frequency as well as cellular?

Thank you...

Please if you can also CC any responses to my email address, in case I miss the message here.

There is no question in my mind that this was a BIG set-up. This "accidental" pick-up by these demoncratic law breakers is a fake out to the max. In a national tv network news piece last weekend, the reporter also stated that the couple secured a laywer to make sure that they were held harmless from prosecution when turning these tapes over to Democratic honchos who were going to turn the screws. If anyone else did this, do you really think that they would not have instead been prosecuted under the ECPA? I doubt it. Bottom line is simple, regardless of how we feel about the law, it currently is the law. This couple has no exemption from it and should be so charged. Then the courts can address this issue.

Court decisions are only precedent if they are published. Many state trial and appellate court decisions are never published (Lexis/Westlaw doesn't count as publication).

The denial of certification by the Supreme Court has no value as precedent. In fact, the newest Bluebook (which sets the standards for legal citations) has dropped the requirement that citations mention denial of certification (or certiorari as the federal Supremes call it).

> > to life.

To quote Homer Simpson: "WOOOOOO HOOOOOOOOOOOOOOO!!!!!"

I can't believe it! Here I was all ready to send this thing back
to Radio Shack repair (and lose cellular coverage) when all I
had to do was hold down a couple of buttons and turn it on!

I love you, man! And I don't even want your beer!!

This DOES work, as I had a Pro-43 that had all the symptoms of DEATH
(no display, no audio, only the dial light worked) and Radio Shack
repair quoted $150 to fix it.

Performing the sequence quoted above brought it back to life for NO
COST!

Radio Shack technicians either aren't very good, or they are not very
honest.

x^(-1) == 1/x.

Notice that
x^n / x^n == x^n * x^(-n) == x^(n + -n) == x^0 == 1,
which is what you should expect.

2920. WTB> JIL SX-400 Scanner (1980's model)

I am looking for the mid 1980's model J.I.L. SX-400 Scanner with or without the RF-8014, RF-5080, RF-1030, ACB-300, RC-4000 and P-1A accessories. This is an older scanner that covered 26 to 520 MHz but could have it's frequency range expanded by external convertors much like the GRE 9001 convertor.

I understand it has alot of birdies, etc but want to use it as a receiver not a scanner.

>S-9 to S-8.5).
>
>Bill

Wrong again, or at least off on an inaccurate tangent! Receiver SPECS for sensitivity are ALWAYS given in microvolts. THATs what you are concerned with at a receiver antenna input jack. S meters have nothing to do with a receiver's sensitivity, and most scanners don't even have them anyway. It merely gives a visual indication of RELATIVE signal strength.*

Since a receiver owner is concerned with HOW MUCH signal is arriving at his input jack (through the lossy cable) he must measure that signal in the international standard of microvolts. We're talking VOLTs here!

Thus, you use the formula for a voltage ratio:

dB = 20 Log (VOLTS1 / VOLTS2)

A 50% ratio of 2 to 1 gives: dB = 20 Log (2 / 1) => 20 x .301 => 6dB

* Incidently, the standards for S meter calibration (if heeded at all by the manufacturer) is a 50 microvolt signal should give an S 9 reading, and each S unit should represent a 6 dB change in signal strength.

An amateur license IS an FCC license.

A broadcaster's (TV or radio) license is an FCC license.

A public safety radio license is an FCC license.

They were ALL issued by the FCC and are FCC licenses.

Maybe I said it wrong... How about mixing external to the receiver, which
for all intents and purposes, is atmospheric as far as a receiver designer
is concerned... no amount of filter additions and IF design can eliminate
the resultant signal if the mix places the undesired signal on a frequency
of a desired signal.

A little rust on: Your antenna connection

Someone correct me if I'm wrong (with all the looking up I've been doing lately, I don't feel like looking up this trivial item) but CB is not "license free". IIRC, there is now one "license" which covers all citizens who opt to operate under it. Of course, if you don't, they could probably still enter if you are transmitting and they feel that it does not conform.

>Last time I read that part of the regs (both 95 and 97) the inspection
>clause was restricted to "normal business hours". If that has

>de NF2G

Don't know about your ticket, but on the back of the ticket bearing the call N6QYA, issued nine years ago, on the right hand side, it doesn't say "any time", but neither does it say "business hours." I think you might be confusing it with a broadcast station license, which I believe does state "business hours."

From the Amateur Radio Newsline WWW site:

[These are reported to be valid as of 11/8/93]
PART 97 - AMATEUR RADIO SERVICE
97.103 Station licensee responsibilities. -
(c) The station licensee must make the station and the station records available for inspection upon request by an FCC representative. When deemed necessary by an EIC to assure compliance with the FCC Rules, the station licensee must maintain a record of station operations containing such items of information as the EIC may require in accord with 0.314(x) of the FCC Rules.

2934. MDT stuff - Generating polynomial (?)

Newsgroup: rec.radio.scanner
Date: 1997-01-23 00:00:00 UTC
From: hh357@aol.com
Message-ID: <19970123064001.BAA16656@ladder01.news.aol.com>
Source record: 210490

I was very excited to see the recent post regarding police MDT (mobile data terminal) decoding. However, upon viewing the cryptic C code, the terrible variable names, and the general lack of comments in the code, I was disheartened.

But not completely. I am determined to forge ahead.

My first goal is to re-post a more readable version of the code with comments, etc.
But to do this, I need some help.

First of all, I have to admit not being a C programmer (yet). However, this has not stopped me from reading and understanding most of this program and the MDC4800 protocol.

EXCEPT in one section of code - that dealing with error correction. I can see no correlation between the supposed generating polynomial, and the C code presented.
Neither the polynomial, its complement, or darn near anything else is obvious.

At the beginning of the post it states that the generating polynomial is 1 + x^-1 + x^-5 + x^-6.

First of all, I am not familiar with the use of the negative exponents here. I would have written something like x^6 + x^5 + x1 + 1, or a bit sequence of '01100011'. I am assuming that the negative sign is implying a reverse "direction" in the generation of the polynomial, so that the other (negative exponent) method would produce a pattern of '11000110'. (notice the mirror image here)

Is this correct? Is it implying any thing else about the shift register implementation for the encoder/decoder? Is it saying something about the actual order that the bits are transmitted in ?

The routine named 'Pork' is where this testing is taking place. (egad, what a name.)
The only code that looks AT ALL similar to this notation agrees in only 3 of the 4 terms and has two more bits.

It looks to me like the authors meant to write 1+ x^-1 + x^-5 + x^-6..... I mean the rest of the program is pretty cryptic, and shortcutting this explaination too seems consistent with the coding style.

Anyway, the only thing that looks at all close to this is in the positive exponent notation that I'm familiar with, but that it should be x^13 + x^11 + x^5 + x^1 + 1.

(I haven't checked that this would be a good generating polynomial. I'm so confused by the code in the second half of the 'pork' routine that I have no idea whats going on there, so please bear with me.)

If anyone can straighten me out, or at least head me in the right direction, I would appreciate it.

Thanks,
H Higgins

PS . If you would like a copy of the original post please email me, and I will glady oblige.

It definately appears that the 235XLT is a winner, however, I do wish they had based it on the 3000XLT instead and included military aircraft coverage. A handheld without milair is useless to me - well, actually, the 235XLT is useless to me, since my local sheriff, fire and EMS are in the process of switching to an Ericsson all-digital trunked system. HEY, UNIDEN, are you LISTENING?

And, I do hope they've solved the 890's intermod problems in the 895XLT.

What's weird to me is that imaging on a dual-conversion scanner (ie RS
Pro-51) resulted in quite a clear signal. Given the same location, I
thought that a triple-conversion receiver with a downconverter would
perform equally well.

I just want to make sure that I don't have a defective converter box, yet
I don't really have any way to test it other than attempting to pick up
signals in its input band.

fuzzbox effect...what an odd way to get square waves!!!!)

My ancient heathkit GR-64 has a BFO, am bust dusting it off,
Won't hook the mess up until I get an isolation xformer for
the patch...

AND.... Tadah.... just scored an ancient Radio-shack PRO-33
20 channel scanner for that all-important 137 MHZ reception...
As the scanner tunes in 5KHZ steps, it might even
tolerate the reported doppler shift...

SO......
1) Assuming I find an antenna, will the little 741 interface
and the shareware program for weather fax I got with it do the
job for 137 MHZ reception ?

2) the Nuts &volts article has a diagram of a double crossed
dipole antenna. Bottom cross must be grounded as "reflector",
right? Top one is PVC and wire along the sides, just like the
ancient RLL handbook design... OK. but what length??? The
formula in my 1970 Arrl book doesn't look too useful over 50MHZ
or am I banging the calculator wrong???

Any suggested lengths???? Got baling wire o plenty...
(then off to the cable co dumpster for coax.... and away we
go...)

3) I am really interested in the High Orbit 1691 MHZ sat
images... But that $US600 downconverter.... ulp...
On the other hand, I garbage picked an old sat reciver a while
back (swapped it off.... they aren't worth much if they don't
de-cypher) Now.... hmmmmm..... Conversions anyone???

3B) Those really cheap mini-sat disk systems being sold to
hook one in to paying subscription fees forever.... wonder how
modifyable these are....

Ok...at this point my ignorance is REALLY SHOWING, but heck...
one week ago I was ripe for a Ramsey 137 MHZ kit (fortunately

I am perpetually broke), and then I pick up the scanner at a
2nd hand store for CAN$30.... As a bonus, I get to hear the
walky-talkies at macdonalds 4 blks away (YAWWNNNNNNN!)

This sat stuff looks great.... (I used to mess with
electronics and DX a bit, went to University, got useless
degree, decided to have FUN, went to ART school, got a REAL
USELESS DEGREE, and now do gallery sized set-ups involving
wonky technology... Still can't draw worth a %$&....
So what If I recycle a few sci-fi plot lines here and there...

TRY this....
Sat receiver => computer => stored images scripted to slide
show mode, adding latest image to end => cheesy VGA-2-video
coverter => rented scan rate doubler => rented video projector
high up projecting on the floor of a darkened room...

OOOOHhhhh..... View from a height....

The pro sat pictures from high orbit would be best, but the
low orbit ones are a good start...

Any tips, sites, advice, apreciated big time...
Thanks & regards.... B/H
helling@server.uwindsor.ca

I do a low cost Interface for the AR2700/8000 that I produce as either
a kitset for self build "homebrew" or as a fully assembled and tested
unit. I do ship to the States by airmail.

I have emailed you full details.

Regards

Donald Gray

2944. Apartment Antenna ???

Newsgroup: rec.radio.scanner
Date: 1997-01-23 00:00:00 UTC
From: dstuart@clover.cleaf.com
Message-ID: <5c6k0s$qn2@news0-alterdial.uu.net>
Source record: 210500

I live on the 2nd floor, of a two-story duplex. I need a better antenna than the single stick that comes with the unit. I purchased a taller anntenna with no significant change. My options as I see it: a magnetic mount on the outdoor awning, discone mounted inside the apartment, or live with it as is.

Any help is appreciated.

David

2945. frequencies for Elgin Illinois

Newsgroup: rec.radio.scanner
Date: 1997-01-23 00:00:00 UTC
From: No Junk wanted <NoJunk@flash.Net>
Message-ID: <01bc08d2$ebbcbae0$cbc8b5cf@apprasal.flash.net>

I've got an Optoelectronics Scout for sale. It's a scout model 25 with a frequency range of 10Mhz-2.8Ghz. It requires a CBAR interface to interface to the AR8000 and 2700, and I have and will provide this also. It's in good shape and works well, I had it recalibrated and cleaned at the end of October 96.

I'm asking $300 for the Scout and CBAR Interface, please e-mail me at mwaldron@ohio.net.

73's de Mike.

2947. Re: 890xlt any good?

Newsgroup: rec.radio.scanner

My experience has been exactly the opposite... Only had a couple of 890's but they ALL seem to do a better job than the 760's and even the MR8100 in my truck. I will say, not the best I've ever seen on Low-band but then what scanner is?

CARL

> the 890xlt is junk. over hyped and under-sensitive.

>I was just wondering whether an FCC License same as a Ham operator's
>license? Thanks.

DP> The FCC issues the Ham licence, so I guess that they would be they
DP> same. (I guess:)

I have an FCC license and it is NOT a ham operator's license.

The 8 TV stations in my area have FCC licenses, but not one
of them is a ham operator's license.

My fire department and the sheriff's office both have FCC
licenses, but neither is a ham operator's license.

I think its going to be a while. Many smaller departments are still on VHF and have never made a jump to UHF. My hometown PD (city of @30,000) just got all the dead spots out of their VHF system a couple of years ago and with all the money they've spent, its going to be a long time before they change.

From: alexcalder@greenheart.com
Message-ID: <32e943cf.21055108@snews.zippo.com>
Source record: 210269

We have a Uniden BC 9000 XLT scanner, and we have a small problem. The scanner is being mounted in a helicopter, and due to the angle it's mounted (vertically---display side facing up), the LCD display is very unreadable. We've figured out that the scanner display (LCD) was designed to be read from ABOVE. Our design will require that we read it from BELOW. Is there a way to either (a) modify the unit so the display is angled to a readable angle, or (b) is there a product that we could use to fix it---maybe some kind of prism/mirror/etc...

Any thoughts?

Alex Calder
alexcalder@greenheart.com

P.S. We can turn it upside down and the display is very clear and readable.... but the controls and display are now upside down. Not too convenient.

2964. Re: Police radio & my security light???

If it is the policeman's radion causing your light to act strange like that, I would not be suprised. I have seen cases where CB radios cause infrared sensor lights like yours to turn on. What could also be an explanation is if the policeman is using radar. Your light could be picking up his radar signal. Sounds like it would be time to do some undercover work and see what the policeman is doing when your light turns on.

I've had one for several years. Sent it in to be circumcised for
cellular, and I've never had ANY problems with it. Please note that
all of these handhelds have a problem with the speaker drying out and
cracking, as it gets older. This is a common problem, but can be
solved either with a replacement speaker, or by using an extension
speaker.

The wall wart 12 volt supply that comes with the 350 has to much
ripple and causes the hum. The best solution is to hook up the 350 to a
real regulated 12 volt supply. As an experiment I opened up my 350
and added a large 3300 mf cap between the 12 volt input trace and grd.
This made a minor improvement. All this nerding around prompted me
to build an in line audio filter to be used with high quality stereo
headphones. The purpose of the filter was to reduce low and high freq
distortion and noise to improve speech intelligibility. The filter works
very well and allows you to use the high quality phones with your scanner,
sw radio, ham radio etc. If anyone out there is interested in the filter
just post to the group and I will get back to you from my personal
account.

I find that listening to any transmitter is impossible unless you are
at least 1 wavelength away. The fomula for determining the wavelength
of a frequency is.... 300 divided by frequency in megahertz =
wavelength.
Example....

300
------ =20 meters
15 megahertz

I hope that helps.

Pat

Stephen,
I got a unit from EEB called the QS200 Mobile Handheld
Holder. It's got a set of adjustable horizontal/vertical
gripper arms that attach to the fins of the heater vent
in your dash/door. You then slide your scanner down over
the mounting plate which holds it in place. The mounting
plate is backed with rubber padding to keep the radio
from slipping any and from damaging the back of the radio.
The plate itself is only about 3x3" so is not that noticable.
I have used it to hold just about all my handhelds and
wonder how I got along without it. It works good in my
car because the dash is tilted at about a 45 degree or so
angle which puts the radio at the same angle allowing the
display to be easily ready. If you have a vertical dash
it might not be as easy to read if it is mounted down lower.
It also helps if you can shut off the heat flow to the
vent you're "attached" to so you don't cook your radio in
the winter!
This thingy sells for $15 and is described and pictured
in the EEB catalog. Give them a call at (800)368-3270 to
get a copy.
Good luck!

From: Scott Lowry <slowry@interaccess.com>
Message-ID: <32E95CEF.23DF@interaccess.com>
Source record: 210278

FYI, A-1 is also licensed for 452.200 and 452.500. All of Elgin's city services (PD, FD, and Pub Wks) are on the trunked system now. The freqs are;

855.2125
859.9875
866.325
866.6625
868.625

It's a Motorola Type II system so you need to lock out the data channel. The PD still uses 155.130 ("Low Band") and 156.150 (Detectives) quite a bit though.

> Thanks!

The range of what you can recieve all depends on a couple of factors, one being the strength of the signal you are attempting to recieve. If the transmitter or repeater you are picking the signal up from is weak or low power, you wont be able to hear much. Second, depending on where you live and what kind of natural and man made obstructions there are. Buildings, trees, mountains, etc. can all hinder your reception greatly. Also i beleive that the BC350A is a base/mobile unit. If you are using this in your car, your alturnator can affect your reception if you are not grounded properly through the power supply.

Hi Gil,

Most Fast Food chains use their headsets for internal comms when
a customer places a special order. This accomplished via different
PL tones. Generally if the order taker is a teenager, they will
make comments about the person placing the order before they drive
up to the second window to pick up the order. You can also have
alot of fun sometimes, by responding to any internal comms that may
take place while you're waiting at the drive-up speaker. They think
they pushed the wrong button, and will wonder what went out over the
speaker.

I heard recently that the East Brunswick New Jersey police department is going to be completely replacing their radio system with a new, state of the art system (possibly trunked). I am trying to find out if anyone has a listing of what their new frequencies will be. Any information would be greatly appreciated!

Most scanners you would buy in Canada are made by the same manufactures
for the States--therfore the vast majority of scanners up here are built
to American specs--no real advantage.

>

Well, a quick check of Percon shows that they operate on either 39.76 or 39.8

This is good (sort of). Let's assume they aren't using CB or any additional radio equipment for 'channel 5'. If they are....good luck.

Set up a limit search to run from 39.0 to 39.995 and you will probably find them in this range. It may take several times of them going to channel 5 before you catch them. I'd bet that they are between 39.5 and 39.995.

This is just an 'educated guess' based on the fact that they are using older lowband radios that are probably not programmable. They also are probably not going to be able to go very far out of band - that's why they will stay in the 39 range for both or all channels for optimal distance on TX.

There are several small towns around me (including mine) that have channel 2,3,4, etc and they all operate in the 39 range as well. All of their 'other' channels are in the 39 range too. My town changes its 'channel 4' about every 18 months or so. Every time they have done it, they stay in the 39 range. It takes a couple of days to figure out the new one, but it isn't difficult.

If the channel 5 is used mostly from the station-to-car rather than car-to-car, you could always sit across the street from the PD with your freq counter.......

Happy hunting.

Like most stuff from Radio Scrap, it don't work at all.

If you are going to use the headphones for the scanner only, then just cut the cables and connect the white and red together. don't short to the black or bare wires, they are the grounds.
I made up a set for my scanner like this. Most pairs of headphones are stereo these days and they are not that expensive eather, My pair cost $5.00.

have fun!

In many handheld radios like the ICOM and Kenwod, the battery compartment slides on and off from the bottom of the radio. As they get older, the fit seems to loosen up, and then the power sometimes is erratic.

Does anyone know of a fix for this common problem?

The APT signal is about 38KHZ wide, so the scanner
won't yield a useable signal until it's modified.
Usually a resistor across a couple of the IF ckts
will lower the Q enough to get by. You might have
to change a filter. Either way, the signal to noise
ratio is degraded by increasing the bandwidth, so
a pre-amp at the antenna will be helpful.

: good law enforcement/critter/scanner stories?

Yes. We have horses that run through downtown Victoria, drawing carriages. (For those not in the know, Victoria, British Columbia is the most "British" of all Canadian cities, and we have double-decker buses and all sorts of weird stuff going on downtown. This doesn't necessarily explain any of what happened, but it's interesting background.) Anyway, these things exist for tourists to see downtown in.

A few weeks ago, someone forgot to lock the stable door, and suddenly, there's a call to all units downtown to "be on the look-out for a horse running south on [street].. description.. four legs."

Monitoring the channel, the cops were making awful puns: "Found him yet?" "Neigh.." and so on. Eventually, they caught the horse and brought him back to the stable, but it was funny while it lasted.

According to the book Radio/Tech Modifications published by ArtSci....

Remove battery and antenna.

Remove 2 screws from case and 2 from the battery retaining plate and open case.

Locate and remove the 2 small acrews at the base of the circuit board.

Gently pull off the front panel from the circuits.

Locate and remove the 10k resister R-215 located above the microprocessor (Uniden UC-1147). Note that the resistor is above the "den" letters on the microprocessor.

Reassemble the scanner.

Reset command: Press & hold (2), (9) & (manual), turn off and back on.

It worked on mine. Note....I simply destroyed the resistor with needle nose pliers. Good luck.

Pat

If you throw real hard, you might get seventy five yards with it. That works out to about .004 mi. As far as reception of signals, it depends on a lot of factors. Power of the transmitter, height of the antennae, types of antennae, and obstructions like hills and buildings are the largest factors. In most parts of the country you can probably get at least a 20 mile radius with the whip or rubber ducky antenna.

: city where 5 towns have their own trunked systems, you can only scan 1
: at a time. That's great for one system that has 3 departments on it
: that share, but what about the others!!!!!!!

Correct. The TrunkTracker will only monitor one system at a time; to monitor another system you must change trunking groups manually.

With the review unit I've been testing, I've found that this isn't a major problem in my area. Here, I've got one *big* (28 channel) trunked system that has most of the public safety stuff on it, and one other smaller (5-channel) system that is used by one police department and 2 fire departments (both dispatched, however, on the same subfleet). Most of the really interesting listening is to be found on the big one.

Motorola radios will monitor multiple systems when scanning, by jumping to a different data channel as needed. However, one loses priority capability when doing this; the same could probably be done with a later version of the TrunkTracker (and supposedly, such is being worked on). It probably was not included in this version to make things easier, and to reduce initial R&D costs.

I'll cover this in more detail in the 'National Scanning' review.

3002. Any Antenna Recommendations On The BC200?

Newsgroup: rec.radio.scanner
Date: 1997-01-24 00:00:00 UTC
From: waterman1@hotmail.com
Message-ID: <32e918a7.1207697@news.one.net>
Source record: 210336

Any Antenna Recommendations On The BC200? I am looking for good
general use antenna for the freq. that I use most (cel, cordless, and
police around the 154.mhz area.
Is there such an antenna or do I need to buy a separate antenna for
each range of freq.?
Where is a good source to purchase these antennas?

Thanks for all the help

Tim

I get no commission from this service. But now there is absolutely
no more reason for you and your kind to complain about others who
take up bandwidth and cause you to spend too many more pennies to
read all that is there for you to choose from......

The site is: http://www.bigger.net

Their 800 number is: 228.1993
Their fax number is: 408-977-7038

their site is in San Jose Calif:
oh jes

Get this: $59.95 for signing up and unlimited use.
Includes one year of free e-mail.
Year two you pay 10 bucks for service to e-it

That is 60 bucks for umlimited Internet Access and e-mail.

so dry your eyes and uncross your legs and get on the
phone or go to the http site and see for yourself.

our two local tv stations have been giving them great free
advertising press-conferences and they have their service
on the net sites they have:

http://www.kron.com
http://www.kpix.com

You can also see what is happening in the SF Bay area news
events and more.....

Again, forget all those pennies you must pay extra for your
having to deal with so much chatter which causes you to have
a major angst-attack. Your freedom bell is ringing and it's
for a full lifetime of use.

What is this thing about me being Arrogant? I ask you.

From the arrogant one.....

bill conduit
etc.

3006. 890 XLT

Newsgroup: rec.radio.scanner
Date: 1997-01-24 00:00:00 UTC

I also must admit that I am not a C programmer, but in all applications
I know of, a negative exponent (x^-1) means to move the "x", with the
exponent, to the demominator (1/(x^1) or 1/x). Is this right?

Collin

There is one sufficient compelling reason. It's illegal to use it
under Part 95. So don't do it.

Let the buyer beware. I too live in the Bay Area and one of those TV stations was also very skeptical based on the fact that their freebee software was not yet available even when the reporter offered $60 on the spot because their head programmer is still working on it. They have very little hardware in place to handle what may become a flood of users (ala AOL). Their staff numbers about 18. Their approach is to obtain most revenues and profits through advertising (you know those obnoxious graphical adds that slow down your computer). Will they run off with your $59.95 if times get tough??? Again, let the buyer beware.

Is this the scanner that the new '235 (Trunk Tracker) is based on?

Is this also a just "dual conversion" (as opposed to triple
conversion) scanner?

I have some stories to tell then if it uses a 10.85 MHz first IF
like the BC760XLT and BC855XLT scanners. It will make this scanner
somewhat unsuitable for 'trunk' operation in some locations.

Jim

The answer is a typical NO. By that I mean, you can apparently get
AOR and Icom etc. scanners with cellular. Radio Shack is a different
story... I'm led to believe they're always blocked, rumor having it
that it's because they also sell cellular phones they decided to do
this. Don't know, but yes you can, especially in Toronto. But double
check first in case my info is outdated.

Hi Gil,

It's not the food orders that most people want to listen to. The employees have a switch on their headsets that allow them to communicate with each other internally. You would be suprised at what you can hear!

If you get a chance, you should check out the August and November issues of Monitoring Times. They contain articles on Fast Food monitoring.

The article in the August issue of MT can be viewed online at:

http://www.grove.net/fastfreq.txt

Gil,

Yes, you can hear yourself, or friends order... but the big thing for me, is to listen for the off color remarks that the staff at the drive thru make. One evening, while listening to a drive thru waiting to place my order, a friend of mine and I heard the clerks discussing between themselves whether black or white women had better breasts. You name it, you will hear it at the drive thru. The real fun comes when you freak out one of the clerks by commenting on something they say about the previous customer... they start worrying that they might have said something that went out over the intercom to the customer... this has a chilling effect on the clerks. There is also what others have posted, the enjoyment of tracking down the frequencies. I have heard the clerks make comments about the staff at the fast food store as well... so, it is very interesting. Just my $0.02...

Drew,

I've come across several Fast Food chains in the Washington DC area
that operate on the same frequency and are right across the street
from each other. A common frequency that's been popping up around
here the last 6 months is 469.0125 (Speaker) / 464.0125 (Headset).
I came across a Taco Bell and McDonalds in Reston, VA a few weeks
ago that operated this way. The McDonald eventually switched to
a new frequency pair of 469.0625 / 464.0625 after about a week of
interference!

According to Scanner Master, the county sheriff calls SPEN-3 (154.725)
channel 5. Maybe that's it.

>Wich scanner is a better unit and why? how old is a 2006 model

Here is my tip.

Get a Underwater Kinetics 821 pluckfoam case.
Buy the Pro-2006+OS456.
Get a laptop computer with a soundcard and Probe 2.0
Add a tape recorder and a JIM M-100 Pre-amplifier.
And a sealed 6.5 Ah battery.

Build it into the case and you have a great scanner for home and on the road.

Rich.

Doesn't Work !!!!

My Pro-46 doesn't seem to have this great feature. I Pressed
L/OUT, 2, and 9 at the same time and then turn on the power
off several times. It didn't work.
Is it because I don't have the [11A2] on my scanner. I have
some other label that starts with a 10.

Yes it does. The range is from 67.0 to 256.4 HZ tones. You can have it
set so that the transmitting tone is different than the receiving tone.

Here are some I know for the 220XLT there may be more.

To clear all channels hold 2,9,MAN while turning radio on.

To put test frequencies in channels 1 - 21 hold 2,9,SCAN or 2,9,PRI while
turning radio on. Beware this also clears channels 22 - 200.

To make entire display come on very slowly hold 2,9,L/O while turning on.

For battery condition hold WX,L/O while turning on.

>
>Any help is greatly appreciated.

It makes sense that this is the way the radio must operate. A
Motorola SMR has a continuously transmitting system control channel.
In order to follow any talk group, you have to be monitoring that
control channel at all times. If you miss some data, you will miss
some radio traffic. Therefore, the scanner would not be able to scan
multiple control channels belonging to multiple systems.

Apparently the Uniden scanners will have two receivers - one for the
control channel and one for the rest of the system. To scan multiple
systems, you would need additional receivers for each system's control
channel because they would have to be monitored simultaneously.

>use that for my scanner.

Sure! Take it off the mast, drill two new holes in the boom at 90-degree angles from the original ones, put the bolts through the new holes, and mount the antenna vertically. Add a rotor (since it's directional, you'll want to be able to turn it), and feed with RG-6/U coax. I tried this a few years ago with a Radio Shack fringe-area TV antenna and it works great!

Here's a neat trick, take a sledge hammer and hit as square as
possible on the '5' key. You will then be able to receive
0-12300000 Mhz uninterrupted.

Ray,

If that wasn't you who already posted some to ARS, then there is a
list of many which showed up in ARS today... some 460 mhz 2-ways as
well as some terrestrial microwave frequencies...

You also might try DeJaNews with a filter for newsgroups of ARS
(alt.religion.scientology) using the OLD database. I believe many
were posted a year or so ago.

I purchased a splitter designed for using my car radio antenna from
Scanner
World; you can get them most anywhere. I've also had excellent results;
the
only problem is that AM stations between 560 kHz - 650 kHz don't come in
very well but I figured the "trade-off" was well worth it. Good Luck!

No shit! Someone tried to tell me that the "Communications Act" outlawed even owning a scanner capable of receiving the direct cellular transmission. I'm 99.9% sure that that's bullshit, but all the same, I'm now in the process of DL'ing the whole shebang... Of course, the guy told me that he didn't feel like looking it up so he could cite it... make that 99.99% sure it's BS.

>Tell that tale to your local ECPA co-drafter.

Actually, the ECPA drafter, if he is technicaly coordinated, might tell
you that it is illegal to use those phones anymore. I don't have any
cite with me for those sets of frequencies, but I do have in front of
me "OST Bulletin No. 63", "Understanding FCC R&R Under Part 15 [...]"

In the case of the older 11 meter frequencies mentioned in this thread,
Part 15.114 reads "may be operated until January 1, 1986. Manufacture
importation and marketing of such a device shall cease January 1, 1980,
April 1, 1980 and January 1, 1981 respectivly."

The bulletin also lists the ten 46/49 split pairs, and in part 15.231
states that "manufacture and importation of such devices shall cease
February 15, 1989 and the marketing shall cease February 15, 1990."
There is no date listed where they can no longer be operated, probably
because they fit into the 25 pair plan.

I had, around 1981, purchased my 1600khz/49 split unit, however this
bulletin does not make mention of split at all. (BTW, Mine still works
too, but I never use it... don't even plug it in.)

I use stereo 'phones as is. Leaves one ear free to hear the TV (or wife, eeek!). I never liked having scanner noise filling both ears, either the power supply hummmmm of a handheld, the microp (deeeedledeeedledeeeedle) noise of the Bearcat 210, or the BEEP keypad of the Pro2004 made me only cover one ear.

If you still wish to fill your head with scanner sounds, buy a 1/8" miniplug and rewire your headset for mono/2channel. Or you could get a mono headphone set.

Then go to your bookie and place a bet... but I have news for you...
the courts use facts in evidence, not gut feelings, to convict.

>This
>"accidental" pick-up by these demoncratic law breakers is a fake out to
>the max. In a national tv network news piece last weekend, the reporter
>also stated that the couple secured a laywer to make sure that they were
>held harmless from prosecution when turning these tapes over to
>Democratic honchos who were going to turn the screws.

I don't watch TV anymore... Other than the live reports of disasters,
I haven't watched TV news for five years... haven't taken it as serious
for ten. IMO, there is no longer any difference between ABC/CBS/NBC and
their affiliate newscasts, and the "journalism" of Hard Copy and the like.

I watched a film called "Network News" a couple of months ago. IMO, the
TV news of today has become what they tried to keep away from in that film.

>If anyone else
>did this, do you really think that they would not have instead been
>prosecuted under the ECPA?

Who say's they aren't? Oh, that's right... TV News.

>I doubt it. Bottom line is simple,
>regardless of how we feel about the law, it currently is the law. This
>couple has no exemption from it and should be so charged. Then the
>courts can address this issue.

As far as I know, they still plan to. Will they pursue it all the
way? I don't know... I hope so, but not for the same reasons you
do... I want to see the ECPA put to the test. Do I think that it
might just get swept under the rug? No... I figure that there was
some give and take in that 90% vote for the penalty, fine, fee... whatever
the hell you want to call it, against Gingrich... No, I think that the
two sides of the aisle came to an agreement... might Newt have been
involved? I hear Newt himself went and spoke to the republican side of

the house prior to the vote... just what type of deal had he cut? No,
they will try the Martins.

No, but they have been known to $fine big time when denied entry.

>If someone was doing something on the air that demanded a violent
>felony response, it wouldn't be the FCC on the doorstep anyway.

Maybe I've just been argueing with the conspiracy theorists a bit
too much and it's begining to rub off, but look at the park rangers
joining in on a pot raid in Southern California... because the
park service wanted the forfeited land to become part of the adjacent
park.

The facts: No dope found, and they killed the owner, and still started
forfeiture proceedings for the land.

The FCC reportedly conducted a violent bust of a pirate station in Santa
Cruz about six months ago. Other reports claim that the folks at the
building caused the violence by their resistance. (reportedly, they
even dumped a bucket of human waste on the officials)

On the other hand, Stephen Dunnifer of Radio Free Berkeley has been a
bit luckier, and has been able to hold them off... I even believe he
got a temporary restraining order against the FCC, which even allows
him to continue to operate his pirate station until the case is heard
in court.

I have a Pro-60 sitting next to me as I sit here, and I like it quite a bit. I also have a modified Pro-43, sitting in the other room.

Check your local Radio Shack for a frequency list, and compare it against the birdies listed in the Pro-60's manual. Personally, I think the Pro-60, compared to the Pro-43, has fewer birdies, better audio, better sensitivity, better frequency coverage, and also receives WFM mode for FM Broadcast and TV audio.

If I had to give up one of these two scanners, I'd lose the Pro-43. It's only advantage (cell-capability) is vastly outweighed by the quality and features of the Pro-60.

Could be. Maybe I was thinking about a court decision or something.
I am certain that the FCC is not permitted, under ordinary
circumstances, to break down the doors of a private residence, or to
demand access to a ham or CB station in the middle of the night.

If someone was doing something on the air that demanded a violent
felony response, it wouldn't be the FCC on the doorstep anyway.

I'm not too familiar with East Brunswick, is it a large or small place? If it's a smaller area (i.e. rural), they may be refering to CB channels. But not necessarily CB channel 5. If it's not CB, then refer to the context in which it's used. If used in relation to a multi-agency incident, it may be a state or countywide tactical.
Hope it helps

It depends on a lot of factors.

It is like me asking how far you can see or hear.

With an average antenna system, your scanner might be able to pick up
a low-power signal (like a body-bug) a quarter mile away, but a police
repeater system 50 miles away, or an airplane that is flying 120 miles
away.

I was checking out the Dallas FD and I noticed quite a bit of intermod
coming over the radio. Not living their I don't know if the intermod is
coming through the repeater or just braking the squelch.
I hope they add more cities. It's interesting to listen to places you've
never been to.

3073. Question

Newsgroup: rec.radio.scanner
Date: 1997-01-25 00:00:00 UTC
From: Craig Huggins <gp1066@surfsouth.com>
Message-ID: <32EA7BC6.1E82@surfsouth.com>
Source record: 210121

I was wondering if anyone knows how to modify the Radio Shack Pro-2040.
I want to modify my scanner to pick up the military band.

I think you should be getting more life out of a full charge. I
generally get 8 to 12 hours on a full charge depending on how much it
is actually receiving and the volume. A lot of activity at high
volume and I get about 8 hours. A lot of scanning with minimal
activity and I get about 12 hours.

Try a complete discharge and then a full charge for about 14-16 hours.

Source record: 210124

Greetings.

In a week i am flying from this side of Australia to spend a couple of weeks in Mandurah, Western Australia. If anyone can give me some local freqs that would be of interest to listen too while on holiday that would be great, such as Police, Fire, Ambos.

I have an Aor8000 scanner, so ranges arent really a prob.

Email replies would be much appreciated.

Catch ya,
Woody <woody@netspace.net.au>

Steve,

You need to be a bit more specific about your needs. There are
literally tens of thousands of frequencies in use in Wisconsin. Tell
us where you are and what kind of things you want to hear to narrow it
down.

Mark

The truth as I perceive it to be.
Your perception will be different.

I have a Bearcat BCT-2 Multi band Scanner (that I have hardly used)
for sale.

It's a pretty neat device in that not only you can just punch in the
state that you are in (and it picks up Police, Highway Patrol, DOT,
weather, etc.) It also alerts you to the presence of radio waves in
the vicinity (has a large red light and beeps). That way it offers
protection from Vascar, airplanes, etc). It retails for $250+ and
mine looks brand new. Includes cigarett lighter plug, mounting
brakets, car radio antenna splitter/and wire antenna (that attaches
to your windshield with small suction cups).

$$ Best Offer.

PS. I will be in DC area in a couple of weeks (for the weekend).

copied from UUCP:
>From: David M. Bruce)
Newsgroups: rec.ham-radio
Subject:
Bearcat 200XLT Mod
Organization: The Internet

To modify the 200XLT for recieve
of cellular service:

1. Remove antenna and battery.
2. Remove two Phillips
screws from back, two more from
bottom (battery retaining
spring screws, and the spring
itself.
3. Pry rear cover off from bottom
and remove.
4. Revove two small screws from base of circuit board.
5. Pull
front panel from mainframe at base and separate.
6. Find IC labelled UNIDEN
UC-1447 and 10k ohm resistor
(brown-black-orange) above it.
7
Cut 10k resistor in two with small wire cutters. Or cut one of the leads.
8.
Reassemble, make sure dual-inline connector at bottom of
board lines up
correctly with socket. Gently tighten
bottom screws.
9. Replace battery
retaining spring (slotted side toward
notched hole), ins
ert screws and tighten them securely.
10. Replace battery and antenna.

This
should allow entering of cellular freqs. Given to me by
friend who said it
works, but no warranty from me.

(Proceed at your own risk. WA2ISE)

Yes there are. I live a good distance from Scott AFB here in Illinois. I do, however, hear lots of cool stuff. I love hearing the National Guard pilots practice bomb my hometown. As long as I don't get nuked, I'll keep on listening to them. I would get a top quality scanner to listen to these guys such as the PRO-2042 which I use. You will want to get an outdoor antenna. I use the Radio Shack discone which costs about $50.

Give It A Try,
Norvin Adams III

From: Sean Wagle <bogus@non-existant>
Message-ID: <01bc0b08$c9dd51e0$5c111d26@default>
Source record: 210176

I've been thinking about getting a scanner for a few weeks. I used to know someone who had one a BearCat in the 1980's, -back in the "clip a resistor" days- and it was quite a bit of fun to scan with.

I'm going to do some pricing and check out the options on current models. (My roommate works at RS so he can get me a good deal.) But I might be interested in a modible scanner if anyone has a Pro 43 or 46 for grabs in my area.

We're working on product that will allow a scanner such as
a PRO-2006 or BC-760XLT or 855XLT to 'follow' trunked 'calls'.

The scanner must first, though, be able to receive in the 800 MHz
area.

Your are basically out of luck. I say basically because unless you want to replace the cpu unit in your pro62 US version with one from abroad it can not be done!
This is a fairly easy task, but it would be expensive relative to the cost of the radio.

> E-mail:kc4elo@csra.net

I think I know the history of the DARKSTAR callword's connection with the "TR-3A." This is speculation, and I'm welcome to correction.

A guy named Steve Douglas who lives in Texas & fancies himself as military comms expert & 'black' aircraft researcher sees a strange 'donuts on a rope' contrail in the sky (& possibly hears an unusual engine noise at the same time, can't recall for sure).

Shortly prior to or after this, he happens to hear callword DARKSTAR talking to someone else on a military freq he had programmed into his scanner.

So the conclusion is that the strange contrails must have been generated by a 'black' military aircraft such as the "TR-3" AND that the aircraft was using the DARKSTAR call!

This was written up in a brief article appearing in Aviation Week & Space Technology. I saved the article & will try to dig it up & post the issue date and any further info if there is interest.

So the DARKSTAR/"TR-3" connection is pretty lame, especially if you know what a poor source Douglas is when it comes to military communications -- Steve Douglas isn't exactly 'firing on all cylinders' of his pulse-detonating wave engines,' as the saying goes...

DARKSTAR (usually with a suffix like CHARLIE, MIKE, etc.) has been an unclassified, static callword used by 965th Airborne Control Squadron E-3 AWACS communicators & battlestaff for many years.

I have a Walker Phone (bag phone) that uses eproms I think. How do I turn it on to the test mode? And what can I do with it? Listen to cellular phone calls. Does it scan automatically etc?

On Tue, 21 Jan 1997 10:50:31 GMT, gfanguy@saia.com (Guy Fanguy) wrote:

...I think you'll find the newer versions are more difficult to modify for the frequencies (;>) you're looking for. The early production models only needed to relocate one component, while the later ones need some more elaborate changes (like replacing the CPU chip), if you want to listen to "trunked" communications why not just wait a few months for the new Uniden Trunk-Tracker scanners to appear.....enjoy....

3099. Scanning Software Woes...

Newsgroup: rec.radio.scanner
Date: 1997-01-25 00:00:00 UTC
From: Michael Alexander <malex007@earthlink.net>
Message-ID: <01bc0b13$9fd5bbc0$6c512399@nec-ready-9022>
Source record: 210188

I've been running Probe on a NEC Ready 100 Pentium without a hitch for about a year. Last week, I switched my 2042/OS535 over to another NEC Ready PC--different model but the sole difference appears to be this second machine has a slightly smaller hard drive than the first. Now, I can't get the blasted rig to work! When I hit "Scan," the radio tunes into a weather channel (which has not been programmed into Probe) and refuses to scan.

No amount of fiddling with I/O addresses, IRQs seems to work.I've checked com port settings (no conflicts); switched serial cables; reinstalled the software 2-3-4 times. I've even tried installing a new I/O card with two serial ports (which created conflicts with my com 1, where my modem is installed).

I contacted Datafile and Joseph Perry has been terrific at giving me suggestions. He's even called me at his own expense (how's that for technical support!!). Still, I'm stumped. Anyone have any ideas what I might be doing wrong? Any help would be appreciated.

3100. Re: Trunktracker is Here!!!

Newsgroup: rec.radio.scanner

Message-ID: <01bc0b12$5db82f80$6c512399@nec-ready-9022>
Source record: 210189

$250 sounds too good to be true, for a decent 300-channel scanner, let alone the first trunk-tracking scanner on the market. TWICE, a trade magazine for consumer electronics, noted in its CES issue that the list is $429.95; Grove says it will have them with "special pricing" for about $300 at it's web site.

I think you've found all there is.

> 2) I can hear lots of cell phone traffic on the 51 ... so does that mean
> this unit is pre-block vintage?

What you are hearing are images of the cellular frequencies
due to the dual-conversion nature of the Pro-51. The last
of the keypad-trick-into-800-cellular units came out 7A4
(July of '94) I believe.

> 3) Where does the 51 fit in as far as cost/feature, say versus the other
> RS models? I have found it to be not that easy to get used to ...
> about a 5 (from 1 to 10), but it's getting easier as time goes by.
> Maybe most scanners are like that by nature.

The RS models are about as easy as you get to operate. The
Pro-51 is a good deal if you get one on sale($190). At the
usual price of $300 it is not a good deal. This radio is
basically a BC220XLT/BC230XLT(since the 51 is made by Uniden) that
usually sell for $200/$220. This radio gives you your
average scanner frequency coverage, scans/searches fast,
has 200 channels, large display and nice backlight. It is
also noted for its annoying squelch tail(the burst of static you hear
after a transmission). The tighter you set the squelch, the worse it
gets.

Have fun with your new toy!

Source record: 210196

This is very odd to me... I've been through

almost everything on usenet and internet

about this scanner (890xlt). Some people

posted the 890xlt to be the worst scanner

due to LOTS of intermod, images and

birdies. Then I read, the 890xlt is a work

of art. Now i'm really confused. Can

someone out there help me out how am I

going to spend my money? I just want a

scanner that has good reception 30Mhz-50Mhz

(VHF low band) and 800Mhz-956Mhz. I don't

care about the other freq.(118-512Mhz).

Also I live in a populated area and will

never use a outdoor ant.(maybe one that

sticks on a window). Email me or post for

those who can help me decide or owners of

890xlt. Thank you, and have a good one.

...gee that's the small problem. Are you going to get the installation FAA type certified as well as the scanner itself. hate to have it cause all sorts of EMC/EMI problems after you go through all the trouble of mounting it. Incidentally what antenna did you have in mind ? As for interference problems, note that it is a computer controlled device and will radiate interference that just might cause problems with your VHF com and nav gear....good luck....enjoy....

Just bought new 2036 for $109. I have two questions I need help with.
1. Were two different models made, I returned the 1st one as after unplugging it lost all stored frequencies, this one made 10/94, they opened it up and battery soldered in and they had another new one made 4/94 which they exchanged for it. This one also lost memory after a few hours unplugged. When they opened this one it was different inside than the 1st.
2. How long shoud memory be maintained after unplugging?

Indiana State Police use the following freqs at all posts that have not yet switched to the 800 Trunked system. Look in Police Call, Spectrum, or Monitor America for the trunked channels (There are a lot of them):

42.26 Mobiles, and 42.42 Base is used for normal dispatch
42.12, 42.40, 42.16 are used for various Car to Car and other details.
155.370 is used for Point to Point traffic
155.445 is used for mobile extenders.

Redkey (Dist 25) and Connersville (Dist 41) have not yet switched to 800, and I don't know if/when they will.

If you check the processor, you will probably see the "B" designation on
the chip. These are not modifiable by conventional methods. You will
probably need to do the "virtual downconverter" to this unit or just
pick up the cell images above 894 Mhz.

Bi> Hello, I am writing to all of you today with a strange request. I am
Bi> a 24 year old "wanna-be" college student. The reason I am a wanna be is
Bi> as follows: I cannot afford college. I know what you are probably
Bi> saying, "who cares?" And I implore you, please, care. I am not going
Bi> to waste your time and mine by printing my "sob" story. My family is
Bi> going through very difficult times, and I desperately want to go to
Bi> school, but cannot. What I am doing today is asking all who read this
Bi> to please help me. Most of you are going to think I am full of crap,
Bi> but I ask you to please trust me. I am not a lying person, just a
Bi> desperate one. All I beg all of you to do is send maybe one dollar,
Bi> maybe five or even ten. I would not consider asking more, because I do
Bi> not think people would, without knowing if the person is legit or not.

Bi> Obviously I am not going to claim to pay you all back. Then I would
Bi> be lying. If one day I could in some way, I would be the first to do
Bi> it. Chances are, I will never be able to. I am asking you to think how
Bi> you would feel in my situation, poor and desperate. If this message
Bi> offends you, I am sorry for wasting your time. If you are possibly
Bi> able to help, I thank you from the bottom of my heart. My E-mail
Bi> address is listed below, and my POBox is listed as well. If you are
Bi> kind enough to help, please send cash, as I do not know what kind of
Bi> hassle checkswould be with taxes and all that. Actually, it does not
Bi> matter, I will claim whatever I receive. Whatever is necessary. Again,
Bi> I am not trying to cheat anyone, not even the government who is
Bi> supposed to help people like me to get through school. But i guess we
Bi> all know what the government is like!! By the way, if this is somehow
Bi> illegal, although I cannot see how it is any different from a
Bi> telethon, I apologize and plead total and complete ignorance. If
Bi> someone can prove they are from the government and tells me it is, I
Bi> will return whatever is received. Again, thank you to all who may
Bi> help, and I apologize to all those who were bothered by this. Thank
Bi> you.

Damn! I like your style, Billy. Here is my credit card number.
Use it any way you want, up to 10 grand. 1346 9823 1428 9117

Gee, all I hear during the day on our trunked system is "Bus 54, could make
sure that Janie Sommers is picked up at ..." and "Unit 247 this is Unit 112,
I need two more ballast transformers over at classroom 103 at the Ford Middle
school ..." and it is almost non-stop. As a consequence I can miss Fire
dispatchs and police dispatchs.

We have five or six communities on this system; all their streets and
sanitation people, school district personnel, buses, animal control
officers ... need I go on?

With my trunk tracker accessory (soon to be available to the public) ONLY
those groups you want to here - or don't want to here (does Uniden have THAT
feature) will be heard.

I had the same problem when I bought my PRO-2036 and apparently many
others have had the same problem also. Return it to the store where you
bought it for service (If they try to stick you with yet another unit
from in stock test it out before leaving the store). Their service
center will install a new battery for you. Unfortunately it will take
about two weeks.

> Jeff Kilgore, KC1MK

I have been told that the Uniden BC3000 and the RS PRO-26 functions and circuit boards are virtually identical.

The differences:

1. The BC3000 has 400 channels.
2. The RS PRO-26 has a lock-out review feature
3. That's all I know about ...

Anyone else?

It's hard to say why they didn't but it could be because either it would drive up the cost or perhaps the laws and copyrights and so forth get in the way. I agree that I'd like to see a scanner that would cover it all. If one ever becomes available I'll snap it up. For the hell of it I'll probably snap up this trunked tracker. Now this will be quite a challenge for me to work as I'm totally blind but I'm willing to fool with it to see if I can get it to work. If I can't I'll take a loss and resell it.

Source record: 210227

As Scott's reply suggested, but didn't spellout, search the 138 to 144 mHz range for air-to-air comms. Make sure you are in AM mode. Most scanners won't allow you to switch modes manually and will automatically set NFM in this range making them unsuitable for use.

3139. Re: Military Bands

Newsgroup: rec.radio.scanner

I believe that the 2037 allows you to manually set the receive mode. If so, try searching the 138 to 144 mHz area in AM mode for military air-to-air comms. Also, if you live near the ocean or Great Lakes try 381.80 MHZ AM for Coast Guard air ops.

3140. AR-8000 Problem

FOR SALE: Radio Shack 2006 scanner. I recently bought
this over the phone from a guy who said "it works just fine". It
does, on certain freqs. On other when you try to enter a new freq,
it inputs the freq either 8 mhz high or 8 mhz low. Evidently there is

some kind of CPU/logic problem on certain freqs. It works good
on the freqs that it inputs ok, sensitivity and slelectivity seem to
be fine.

Will take $175 for it as is for someone who is a fixer upper.

Bryan

3146. Pro-51, bring me up to speed

Newsgroup: rec.radio.scanner
Date: 1997-01-25 00:00:00 UTC
From: Rusty Yarnall <ryarnall@ix.netcom.com>
Message-ID: <5cd5t5$hmq@sjx-ixn7.ix.netcom.com>
Source record: 210235

I have just purchased the RS Pro-51, code on back is 7A6.

1) Are there any mods that can open it up to scan more freqs?
I tried the L/OUT+2+9 (turn on) and it did wipe out my preset
memory banks and replaced 1 through 25 with some other freqs
that appear to be preprogrammed for test purposes at the factory.
Three of the freqs in slots 14, 15, and 16 are the only ones outside
the scanable range and they all reside between 54 and 88 mhz, so
this allows me to scan in that range.

2) I can hear lots of cell phone traffic on the 51 ... so does that mean
this unit is pre-block vintage? I might guess the date code means
it was built in July of '96 (7A6), so if that is the case then not all
cell phone traffic is blocked, or cell phones are now using more
freqs than before. Scanable freqs are 851 - 868.9375 and 896.1125 -
956, so the blocked freqs are 869 through 896 - is this so?

3) Where does the 51 fit in as far as cost/feature, say versus the other
RS models? I have found it to be not that easy to get used to ...
about a 5 (from 1 to 10), but it's getting easier as time goes by.
Maybe most scanners are like that by nature.

4) I have captured a couple URLs to snoop out, any more would be
appreciated for freq listings etc. How about books with listings?
Mags?

Thanks

Rusty

Always a newbie at something ....

How close does the source have to be? Could I find any frequencies coming from inside a house from down the street or across the yard etc? Using the $100.00 Rat Shack counter.

Not yet. But give them a few months. I'd guess we'll see all sorts of
anti-monitoring legislation coming down the pike due to the Gingrich
incident. This is something both parties can agree on...neither one wants
Joe Citizen to be able to monitor their activities and gain insight to
what really goes on in Washington.

I knew that, but rather than to be like the idiot, I prefer to check
the cites before I assert that something is true or not... The only
thing in the entire radio act (as amended in 96) which comes close
to what the guy was claiming, it the type acceptance rules (Sec 302)
and as far as I can fiqure, the guy misunderstood the part saying that
you cannot use a non-accepted receiver, in combination with no scanner
which receives cellular will be accepted, as meaning you can't use a
scanner which picks up cellular.

I have a Bearcat BC-2 Multi band Scanner (that I have hardly used)
for sale.

It's a pretty neat device in that not only you can just punch in the
state that you are in (and it picks up Police, Highway Patrol, DOT,
weather, etc.) It also alerts you to the presence of radio waves in
the vicinity (has a large red light and beeps). That way it offers
protection from Vascar, airplanes, etc). It retails for $250+ and
mine looks brand new. Includes cigarett lighter plug, mounting
brakets, car radio antenna splitter/and wire antenna (that attaches
to your windshield with small suction cups).

$$ Best Offer.

PS. I will be in DC area in a couple of weeks (for the weekend).

Uniden makes a good leather case for thier radios, however the problem is
finding them. According to Uniden Circit City is thier retail outlet, but
not in Arizona! I have tried thier 800 number numerous times with no
luck....

Turn it on its side and mount on a good mast. However, it will be rather directional just like it was for TV. It will not be very good for very high freqs(800+) or very low(30-), but it is cheap. BTW, this subject pops up periodically, so you will probably get some good advice from the experts.

A couple of years ago, a few hundred head of cattle broke out of the cattle yards in Rock Island, IL. It was absolutely hilarious listening to these midwest cops trying to coral these cattle in downtown Rock Island using their squad cars. I guess one of them found that if he just turned on his rear amber flashing lights, the cattle would follow him if he drove slow enough.

Rock Island PD is more used to drugs, gangs, and drive-by shootings. But I'm sure none of them will forget playing cowboy!

Not sure which ANG base you're talking about, but here's some freqs from the 178th and 180th
ANG units based in Toledo and Springfield Ohio. I've heard lots of good air-air chatter on these.
Try searching in the same ranges as these freqs for new ones. Also included with these freqs
are some notes I've jotted down for each. Hope this helps.

138.4500 SPRINGFIELD OH Military National Guard
178th Fighter Group (SABRE Ops)
Air-air training ops in Restricted Area R-5503
air-air tactical training
Sabre 31 - tactical
doing g-awareness turns
changed to another freq (vhf), but didn't get it on audio
Sounds like general air-air coordination talk.
No actual air-air combat or air-ground practice heard here on 2-10-96
138.7500 SPRINGFIELD OH Military National Guard
178th Fighter Group (SABRE Ops)
Air-air training ops in Restricted Area R-5503
Saber 41 calling Nighthawk - some comms were "secure victor" which
sounded like static

I'm in law enforcement. I have not done this, but I have heard of ornery police officers getting infrared covers for their hand-held spotlights, and aiming them at infrared sensors on lights to make them go off. He's probably playing games with you. They also have been known to use the same procedure to drive by stores in the middle of the night, and shine the invisible infrared beam into the window to set off motion detectors, resulting in an alarm call. Here, that results in a $250.00 fine after the first 2 false alarm calls every time it happens.

3189. Scanner warm up??????

Newsgroup: rec.radio.scanner
Date: 1997-01-25 00:00:00 UTC
From: ****@*********.***
Message-ID: <32ea89b8.8804099@news.cyberg8t.com>
Source record: 210300

I own an AR2700 and a Pro 51. In both cases I found that each one
requires at least one or two minutes of warm up before I can lock onto
frequencies - weak or strong.
Can anyone explain why this occurs or if it is unique to my radio's.
Thanks
Dennis

3190. ScanCat Gold for Windows and Database files

Newsgroup: rec.radio.scanner

Message-ID: <32eb8a33.8926671@news.cyberg8t.com>
Source record: 210301

I would like to create an Access file for specific frequency's that I plan to use in different area's.
ScanCat's instructions are not that clear on how to create a file and set it up so that I can save the frequencies to different band locations (ie, I'd like to be able to create one file to cover the fifty frequencies located in bank 6 (600-649 for example).
Do any of you know how to set up a new MDB (Access) file to fill individual banks?

Source record: 210302

I live in the Palm Springs area (La Quinta) and am compiling a list of working frequencies in the area. I have quite a few, but know that there are many others out there.
Specifically, I'm looking for Police, Fire, Ambulance, Taxi, Airlines, and other Security companies.
I would like any frequencies including Trunk and Cellular.
The area's that this will include is Desert Hot Springs, Palm Springs, Palm Desert, Cathedral City, Rancho Mirage, La Quinta, Indio, Coachella, Sky Valley, Anza, 1000 Palms, 29 Palms, Joshua Tree, Yucca Valley, Banning, Beaumont, Thermal and all of the Indian Tribes in the area.
I have Police Calls and Beyond Police Calls, but find that there is more and more in the Trucked and Cellular range than is listed in the books.
BTW, this includes Riverside County Sheriff's department and California Highway Patrol.
Thank you in advance for your input.
Dennis

3193. AR2700 Squelch Detect, Computer Interfaces

Newsgroup: rec.radio.scanner
Date: 1997-01-25 00:00:00 UTC
From: ****@*********.***
Message-ID: <32e9879f.8267000@news.cyberg8t.com>
Source record: 210304

I was told recently that the later models of the AR2700 had the ablility to provide squelch detect for various programs or at least to be inabled by cable connection to an unused and probably undocumented pin on one of the chips.
Without sounding like a total neophyte, does anyone know how to provide squelch detect for a computer interface on the 2700. I use ScanCAT Gold and am pleased with the software, but am anoyed at having to scan in full noise since I use the scanner in my office in lieu of background music.
I have tried to use the Radio Manager software which is suppose to be compatible with the AR2700. Unfortunately it will not lock into a signal no mater what setting I use. I contacted Ben Saladino (author) regarding this. He has not been sucessful in resolving the problem and stated.
Is anyone using computer software with an AR2700 that has luck with squelch detection? How are you effectivly useing computer controlled software with the AR2700 - I would be interested in all comments as this is of great interest to me and I doubt that AOR will offer any support now that the unit is dicontinued.
Sincerely
Dennis Wish

Comments about the customers...often of a very "colorful" nature,
complaints about the boss, company politics, and other juicy gossip are
all routinely heard on these channels.

A fun thing to do is to monitor a fast food clerk engaging in some of this
"private" talk with co-workers while you're in the drive-thru line. Then,
when you get to the window, make some comment which indicated you heard
the conversation. The clerk will go crazy, thinking they messed up and
somehow their comments went over the speaker! Often, the clerks will then
talk about the incident...and YOU...over the "private" channel! ;-)

Dear Internet Community,

Hello, I am writing to all of you today with a strange request. I am a 24 year old "wanna-be" college student. The reason I am a wanna be is as follows: I cannot afford college. I know what you are probably saying, "who cares?" And I implore you, please, care. I am not going to waste your time and mine by printing my "sob" story. My family is going through very difficult times, and I desperately want to go to school, but cannot. What I am doing today is asking all who read this to please help me. Most of you are going to think I am full of crap, but I ask you to please trust me. I am not a lying person, just a desperate one. All I beg all of you to do is send maybe one dollar, maybe five or even ten. I would not consider asking more, because I do not think people would, without knowing if the person is legit or not.

Obviously I am not going to claim to pay you all back. Then I would be lying. If one day I could in some way, I would be the first to do it. Chances are, I will never be able to. I am asking you to think how you would feel in my situation, poor and desperate. If this message offends you, I am sorry for wasting your time. If you are possibly able to help, I thank you from the bottom of my heart. My E-mail address is listed below, and my POBox is listed as well. If you are kind enough to help, please send cash, as I do not know what kind of hassle checkswould be with taxes and all that. Actually, it does not matter, I will claim whatever I receive. Whatever is necessary. Again, I am not trying to cheat anyone, not even the government who is supposed to help people like me to get through school. But i guess we all know what the government is like!! By the way, if this is somehow illegal, although I cannot see how it is any different from a telethon, I apologize and plead total and complete ignorance. If someone can prove they are from the government and tells me it is, I will return whatever is received. Again, thank you to all who may help, and I apologize to all those who were bothered by this. Thank you.

Billy

I think Grove is right after all, how many newbies around here ask about
what
scanners can be altered to receive the "Forbidden Fruit" of the Cellular
bands
and how may of us tell them Brand X or Y with info from Site Z.

Personally I don't listen to the cell calls I got sick of Lovers spats and
business calls but if you want to be a Oral Voyeur in a free country I
have no problem with it
I'll just make sure any Cell or Cordless phone I get is digital and/or
digital spread spectrum.

Enjoy.

I don't think it's polite or fair to refer to them as "pigs", first of all. If you want to live in a system where we are too liberal to establish controllers and enforcers of the law, fine. I for one *like* this thing we call civilization. However, to address your other point...

>back in 89-1990. They've tried several times to keep the media and >the citizens from knowing just what actually happens/////NOT gona >happen. Their pitifull attempts at this can be worked around in less >than 10 seconds if one just catchs on to the scheme. If Iam wrong >about this let me know, and Ill get one of those tracking beasts.

You're wrong all right. Counties and cities across America are going trunked with no thought to the listening public's right to know, and they are doing it SUCCESFFULLY. It seems wherever there is a protest there is some compromise, but in many places the agencies get by quietly just fine. The hacker culture is skilled, and the technical morality will eventually diversify to the seedy side of the population to beat these systems in closed illegal groups...BUT, not for a long time, and not without the stigma of criminalization. No one should straddle a public benefit into a public crime. Don't settle for that.

Here in Hillsborough County the officials I have spoken too have an eerie smugness about going trunked AND encrypted. They are proud of it. They believe that as long as only a handful of scanner nerds are sqwaking, they are in the clear. That's why I'm on this obsessive campaign to reintroduce more mainstream folks to the issue and to the benefits of an open system. This is a first for this kind of movement, but it is long overdue.

Dave

>Does anyone know if the Low AirMaster version of ACARS will work with
>the AEA ACARS interface??

No it won't. The Lowe Airmaster interface contains a resistor /
capacitor network (along with a Schmidt trigger for the actual
conversion) and the software looks for this. The AEA interface is
simply a Schmidt trigger circuit.

wrote:

>They'd better give access to ALL media or they'll end up in court with
>the "unselect" media defending a First Amendment suit!

John with GE Ericsson, and head of the Hillsborough Project, was good enough to tell me that only the "select" media will be able to have their Ericsson radios programmed to receive Hillsborough County, Fl. Sheriff's communications.

You're right. It's a completely arbitrary selection process. You can define guidelines, but these guidelines are completely subjective. My prediction is that HCSO will use the same guidelines in place for determining who can and can't install a mobile scanner in their vehicle. The media is among the group "that can". The definition of the media in this sense is anyone involved in the collection and distribution of news full-time.

But time, and power of distribution (which is completely changing in this era of computer communications) have nothing to do with media. The TRUTH is the important element, as is the ACT of communication. Who's to say that the media always tells the truth, the whole truth, and nothing but the truth? Many times the organized media fails to ACT in communicating anything at all.

It's as if Hillsborough County made a calculated decision. Basically it's as if they sat down, took an inventory of who could sue their ass off in light of closing up their communications, and decided that organized corporate media was one such threat. "Better to pacify these people," they said, "than to square off in a losing battle before a judge." Who can organize to sue them and who cannot seems to be their *only* concern. Nothing else. And this goes for many other communities as well.

The fact is that *I* am the media, *you* are the media, and every Saint and every Demon IS the media.

They will also program these radios for "select" crimewatch groups, according to John. However, I have a serious problem with this. Crimewatch groups require an organized and brave community effort (i.e. middle-to-upscale wealthy neighborhoods). Unfortunately, these qualities rarely apply to disorganized, transient neighborhoods where, ironically, crimewatch groups are needed the most. Crimewatch groups also require active participation to keep their status. Puh-lease. I

am pro-police as an *individual*, but quite lazy thank you. I am law-abiding, and I have no criminal history OR intent. I am probably "cleaner" than many officers on the force (I sort of lead a dull life).

Am I expected to be happy as a law-abiding citizen who has been denied access to live police communications, while equally law-abiding Mr. Jones next door who has something loosely referred to as a "good relationship" with the local police, gets this access? Give me a break! Officials of the government should not be able to sit back and literally "make up" who they like and don't like. Let me tell you something, people, I am a VERY unlikeable person. I have never been liked or accepted easily by anyone. I'm eccentric, a poor communicator, and goofy-looking. If I had to live in a world where my rights were defined by who "liked" me and who didn't, I'd have to shoot myself just to end the suffering. But we don't live in that kind of society, and public agencies are the LAST arm of civilization to be promoting such a thing. I think racism starts here. The HCSO and any other agent of government has a duty to treat me like Mr. Jones next door, whether it *wants* to or not.

There is no reason that the checks granted to organized crime groups can't be applied to the individual as they are in Seattle, where they have something called a "Citizen Access Program". Any member of the community may purchase a radio capable of receiving police communications on their trunked system after they present a valid ID and agree not to resell the radios. The HCSO simply has no argument here whatsoever.

>
> Anyone else?
I do know that the BC300 uses a NiCd pack and the PRO-26 uses Alkaline
or NiCd AA batteries.
I have heard that the BC3000 is slightly better in reception. I have
also heard that the PRO is made by Uniden, but is made slightly cheaper.
The PRO costs more than the BC and has 200 less channels (400 on the BC,
200 on the PRO). My opinion is that the BC3000 is just an all around
better value.

WHY is it that EDU types forbid for sale on most edu remailers??? Gee folks, thats one reason WHY I may want to subscribe is find equipment that is IN that category.....(some ham remailers are the same way...some people are into something I dont fathom....IF you are willing to put a remailer on for a subject, EXPECT for sale and wanted msgs.....if you dont want them, DONT bother putting the remailer on)

I am seriously considering dropping my interest in the LMR remailer... and some other amateur remailers....
other than some minor technical talk (which I find here and in Homebrew), I really dont have a need for it...NOW if I could sell some excess equipment or locate something I am NEEDING, it would have value to me..

Having been in the ROK several times, I think that they probably don't like/allow scanners there. However, if you keep quite about it, and keep it on US property, there shouldn't be a fuss. I know for a fact that the ROK folks tap the telephones of the US forces over there. You can actually hear them breathing while you are talking to someone on the phone. SOOOoooo,,,,,,,

Well about the only thing that i know you can do w/ your sound card, is to get a cord that Radio Shack sells for a couple of bucks. The cord is a couple feet long and plugs into your scanners audio output jack and also plugs into your sound card's input socket, this allows you to hear your scanner through your speakers and create .wav files of what your listening to.

I can see how they wouldn't. Considering most trunked systems are
Motorola, that's the biggest market. I think they are going to include
the other trunking protocols in future trunking-capable scanners, but
they are probably looking to just get the thing on the market and get
some user feedback from the first product as to what could stand to be
changed and so forth.

Eventually, I think they'll include EDACS.

Even here in little Chattanooga, TN we have 3 trunked systems right
now on the air. The city of Chattanooga has one but fortunately the
police aren't using it yet, one for Erlanger Medical Center, and a SMR
owned by Saber Communications.

3236. Some basic antenna questions.....

Newsgroup: rec.radio.scanner
Date: 1997-01-26 00:00:00 UTC
From: scasko@aol.com
Message-ID: <19970126152501.KAA29917@ladder01.news.aol.com>
Source record: 210071

I am considering upgrading from my current crop of rubber duckie antennas and would like some suggestions. I am looking for both portable and home antennas for 3 different scanners. Any reccomendations would be appreciated.

I am primarily interested in listening to traffic in the 150 MHz, 460 MHz, and 800 Mhz ranges. I plan to expand my listening range, maybe as soon as I get a good antenna.....

If I get a telescoping antenna, how far out should I open it for these different frequencies?

Thank you,

Steve

First of all, are you using the original cable that came with the OS board? They seem to make a big deal about using it, and imply that it is "special" in some way.
Maybe in its shielding? Also try running the new computer in the vicinity of the old setup, and see if it has any effect on the radio.

Two, I'm sure you tried the baud rate settings etc, but check them again. Why? The OS board works at 19.2 k baud, but the factory default setting is 9600.

Next, I would try a "breakout box" in between the computer and the scanner, at the scanner end of things. Compare its behavior on the old computer, versus the new one. They should be the same.

In case your not familiar with breakout boxes.... Various stores sell them now, for around $30 or less. They attach to an RS232 line, and show the status of the control and data lines using LEDs. They use the power available thru the port itself. I could go on, but I'm sure you've got the idea.

(Older breakout boxes were much bigger, ran off of 2 AA batteries and cost around $300.)

From all your attempts, I would guess the computer is at fault. But there is at least one more thing to do. Leave the OS baud rate DIP switch setting alone, and try different baud rate settings in software. DIP switches can be flaky, they look like their set to one thing, but are actually set to another. Of course, the other test mentioned above should have located this problem too.

I guess the very last test to try, is to load Probe from the original install diskette, instead of copying it over. (or the opposite operation if that is appropriate).

Other than some actual disk I/O error, I can't guess of anything else to try.

Good luck,
Howard Higgins

Brad Sagarin <bsagarin@apocalypse.org> wrote:

>My question to you is:

>Is it possible my security light is acting as a police radio scanner???
In a way, yes it is. It is "seeing" RF (Radio Rrequency radiation)

What is probably happening is:

1) the police car obviously uses that spot as a parking up point. and
radios in to base.

2) Because of the close proximity of vehicle's transmitter and your
security light sensor, the electronics inside are beinf saturated by
the police transmission. This causes the standing currents and or
voltages inside the sensor to change. The alarm circuit "sees" this
change and reacts to it as if it is a genuine triggering and goes into
"lets wake up everyone" mode

>How could this be, if the sensor is supposed to sense movement and heat?

Yes, normally. "Normally" is the operative word. The designer and
manufacturers do not expect "normal" circumstances to include a
transmitter being used so close to their equipment.

BUT most manufacturers could improve the RF regection considerably
with a very small amount of thought and a few decoupling capacitors
and or a few ferrite sleeves!

SOLUTIONS:

1) Complain to the manufacturers of the alarm system.(Fruitless?)
2)) switch off the light (Impractible)

Recommended:-
3) Go down to the Police Station/ Precint House and see the Chief Guy
and explain the sutuation. See if there is any way he can request the
police vehicle not to use that particular parking up point.

If they don't co-operate, can you complain to an authority and have
them forced to co-operate?

From the FAQ "Introduction to Scanning:"

[...]

Scanner Antennas

All scanners come with a built in antenna, permitting
reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring
shaped) antenna, covered by rubber. The rubberized
antennas furnished with current models are too stiff and
place stress on the antenna jack. Older scanners to be
supplied with more flexible antennas. I prefer these |
alternative antennas for use with portable scanners: |

1. The Icom FA-1433B dual band flex antenna, a thin and |
very flexible rubber antenna, is slightly longer than |
a stock heliflex but provides better performance. |
2. The Austin Condor is a 12" long rubberized antenna |
available for about $30. While considerably longer |
than the stock antenna and the FA-1443B, the Condor is |
very flexible and provides VHF-high band reception |
superior to both. It is not designed to cover the |
VHF-low band. |
3. The "Thin-Stick" is an 18 inch telescoping antenna for |
extended range. It is made in USA by Smiley Antenna |
Co., Inc. and is designed to cover both the 2 meter
and 220 MHz bands, but its variable length means it
can be adjusted for optimum performance on other
bands. What makes the Thin-Stick different from an
ordinary telescoping antenna is the spring between the
antenna and the connector portions. The spring
absorbs most of the impact if the antenna collides
with an object. The street price is about $17 and it
is available from Amateur Electronic Supply, Milwaukee
and other retailers. |

Outdoor antennas, like the Channel Master 5094A or Antenna
Specialists AV-801 (recently discontinued), can extend
reliable reception to 100 miles or more. If you do use an
outdoor antenna, be sure to disconnect and ground it during
storms and when not in use to avoid a lightning hazard.
Discone and ground plane type antennas can be more prone to
cause scanner damage due to static charge buildup because
they are not at "DC ground."

3246. PRO-2004 Hackers Wanted for a Beta Test

Newsgroup: rec.radio.scanner
Date: 1997-01-26 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <32eb7cbc.64142508@nntp.cts.com>
Source record: 210081
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.cb,rec.radio.amateur

TO OWNERS OF THE PRO-2004 ONLY
==============================

WANTED: a couple of knowledgeable, astute hackers who own
a PRO-2004 and are capable and desirous of beta testing a
fairly hairy and complex modification to the scanner.

This project will require your input and ideas for better
ways to do a real gnarly, but awesome hack that I've been
working on for about five years. At last, SUCCESS! My version
works fine, but it is not something the casual hobbyist can do
with a "billy club for a soldering iron" out in his garage on
Saturday morning.

I want to make this mod available to a wider array of PRO-2004
owners than just a few crusty, salty, technical experts. In
return for your input and suggestions, I'll make available to
you my knowledge of this hack in a well written and documented
Instruction Set, complete with photos, schematics, and drawings.

I will provide technical support and guidance for this project by
e-mail and will use the postal mail solely to send you the printed
Beta Instruction Set.

QUALIFICATIONS
==============

1. You must own a PRO-2004 and you should be reasonably
knowledgeable of its innards, especially the Logic/CPU and
Phase Locked Loop areas.

2. You must have a Service Manual for the PRO-2004, or be
willing to buy one.

3. You must make two or more detailed reports of your
progress and one FINAL REPORT of results with the procedure I
send you. And you must make suggestions for improvement or
simplification of the job.

4. You really should be an engineer, technician, or an accomplished
electronics hobbyist, and skilled at soldering and electronic
micro-surgery. You must be capable of following written technical
instructions and guidance and be capable of articulating well-
prepared critique, and technical feedback.

5. You must have a reliable e-mail account and be able to send and
receive files attached to e-mail. (Sorry, no JUNO.COM accounts.)

If interested, drop me an e-mail with the subject line: [PRO-2004 Beta]
Introduce yourself with the basics of your qualifications and experience.
Include your real name, address, phone number(s), and electronic addresses.

I will immediately respond with gory details of this project, including
ALL the in's and out's, caveats, estimated costs, and other things you
may need to know before agreeing to perform this project with me.

TECHNICAL QUESTIONS AND ANSWERS
==========

021: How do I restore cellular in my scanner ?

Forget it, pal. It ain't going to happen. The TDDRA Act of 1994 expressly forbids the manufacture or importation of "easily modified for cellular" scanners after April, 1994. Manufacturers turned to putty and removed the cellular programming from the scanners' CPUs altogether. Sorry, it's not possible. But here is a list of all those pre-1994 scanners of which I am aware that are capable of cellular restoration:

PRO-2004 BC-855XLT *3 Regency 4030
PRO-2005 BC-200XLT Regency 1600
PRO-2006 BC-205XLT
PRO-2022 BC-760XLT *4
PRO-2026 *2 BC-700XLTA *4
PRO-2027 BC-890XLT *4
PRO-2030 BC-950XLT
PRO-2032 BC-2500XLT *3
PRO-34
PRO-37
PRO-39
PRO-43 *1
PRO-46 *2 *5
PRO-51 *2
PRO-23 *2

Note 1: Date of Mfg code 1A4, 2A4, xA3, xA2 (label in battery compment), or no "A" in the serial no.

Note 2: Date of mfg code 1A4, 2A4, -A3, -A2 (label on back).

Note 3: Date of mfg code must not end in the letter "D", except for OAID.

Note 4: Date of mfg code must not end in the letter
"D".

Note 5: Units with date code of 5A4 can tune cellular in
30 kHz Steps using a keyboard entry sequence.

For instance, PRO-43's imported before March, 1994, are
modifiable, while some brought in during March and all
thereafter are impossible to modify. Date codes of any
-A2 or -A3 and only 1A4 and 2A4 are assured of being
modifiable. 3A4 and up probably aren't.

The above list does not include those scanners that were
naturally capable of receiving the full 800 MHz band,
without modification, some of which include:

J.I.L. SX-400 AOR-950 Icom R-7100
Regency MX-4000 AOR-1000 Icom R-1
Regency MX-5000 AOR-1500 Icom R-100
Kenwood RZ-1 AOR-2500 Icom R-9000
Uniden BC-800XLT AOR-3000 Icom R-7000
Yaesu FRG-9600 AOR-8000

Some of these radios, if still current, had the cellular
removed by the factory after April, 1994. There may be
possibilities of restoring cellular in later models of the
AR-8000, AR-3000, and ICOM radios by replacing an EEPROM
or reprogramming one, but that is beyond the scope of this
FAQ, and in general, should not be counted on.

==========
022: What about cellular restoration ads for post 3/94 scanners?

Yup, I do see magazine ads to "restore" cellular or to
"unlock 800 MHz" in newer scanners. Gasp! This is almost a
deception. See, they're advertising the "VD" mod.

Virtual Downconversion - better than a venereal disease, but
not by much. To my way of thinking, it is an inferior method
of "unlocking" the cellular bands because:

A. They're not really unlocked. VD is a trick of turning off
one oscillator and turning another one on. Typically, they
set the scanner to the 400 MHz band, and then turn off the
normal 400 MHz Local Oscillator and turn on the one for
800 MHz to make cellular receivable on the 400 MHz display.

B. There is no logical correlation between the actual cellular
frequency and the displayed frequency. It varies from one
radio to the next, but suppose 880.000 MHz comes in. It
might be received/displayed on 432.6775 MHz. Duh....??

C. The total cellular bands of 823.950-849.000 and 868.950-894.000
are not available by this method. In fact, only a small portion
of one or the other (often not both) is available, like maybe

10-20 MHz of the total.

D. There is no 30 kHz stepping. You're limited to the default "rules" for the band in which the cellular appears.

E. The exact results of the VD mod, generally described above, depend on the scanner. Results vary from one to the next. None are what I'd call "good" or even acceptable.

The only good thing that can be said for the VD mod is that it is the ONLY way to get any cellular at all from post March-1994 scanners. So, the advertisements that you see are not exactly "fraud".....but you sure don't get much for your money, either.

==========
023: Are any mods available for my scanner ?

Shooooey, dude, you have the wrong impression about scanner modifications and hacking. Mods are not "available" in the sense that they can be found on a store shelf, or laying on the top of someone's mind who can tell you in so many words or less how to turn that "Snakebite" scanner into a fire-breathing, rip-snorting behemoth of a Turbowhopper.

All scanners can be modified for something; generally a dozen or more things. But only a few scanners have anything written about them in detail. And you have to know where to LOOK. You can't just up and ask for them. Well, you *can*, but you won't get any substantive replies.

It takes me several days to several weeks and sometimes MONTHS to work up and write about a hotshot mod for a decent scanner, and after THAT level of effort, it's not possible to make it "available" off the tip of my fingertips. Continue reading below. There are answers to your question........

==========
024: Where can I find mods for my scanner ?

You can't. There are only a handful of scanners ever made that were worth solitary, focused research and development, specifically for that scanner. Those scanners include the following:

PRO-2004 PRO-2005 PRO-2006 PRO-2035 PRO-2042
PRO-2022 PRO-43 PRO-34 PRO-37 BC-200XLT
PRO-26 PRO-39 BC-3000

You may find occasional articles, files, and "mods" expressly for other scanners not mentioned above, but they are the exception to the rule. Start by looking through the file section on my BBS (619) 578-9247, and

peruse quick-links to other sites from my WWW HomePage:

http://ourworld.compuserve.com/homepages/bcheek

My BBS has hundreds of files on a wide array of radios
and you are welcome to peruse the list. My homepage
has quicklinks to hundreds of other sites that may contain
a file or two on a generic "Snakebite" scanner.

Now here is the problem: I am one of the few, (if not
the ONLY) engineers fully committed to scanner mods.

Yet, there are over 700 scanners on the historical list
now. It is physically impossible for me to dedicate
attention to any but a few, and I have to choose those
owned by the greatest numbers of people who can support
my efforts and help me to pay the rent; put food on the
table; and educate the kids.

That small list of scanners above reaches out to tens or
hundreds of thousands of owners. There is no time left for
me to work on "SnakeBite" scanners that have very little to
offer, even after hours of hard work! But take cheer and
read on.......

==========
025: So you mean there are no mods for my scanner ?

More or less I mean that, yes. But, that's not to say
it can't be modified. It can! It's just that there is
nothing published for it; nothing in the way of step-by
step instructions with graphics, photos, and details.

No one would go to the time and trouble, you see?

An engineer who is capable of designing super-hacks
for that "SnakeBite" scanner is not going to own one!
Instead, he will own one from the above lists, one that
is eminently capable of some very powerful modifications
in the first place.

Now I said your "SnakeBite" can be hacked. It can.

But you are more or less on your own in the sense that
I cannot direct you to a "shopping list" of mods from
which you can pick and choose. There is no such list.
Any hope for you is to figure out what you want to do,
and ask me a specific question.

I can give you a few answers in advance:

No.

No, your "SnakeBite" is probably not capable of cellular;
extra memory; additional bands of frequencies; and things

of that nature that pretty much require factory design in the first place. (See ahead for Memory Modifications)

Yes.

Yes, your "SnakeBite" is probably capable of a few analog modifications along these lines: (You wanted a list?)

1. Tape Recorder Jack
2. Automatic Tape Recorder Switch (beats VOX!)
3. Extended Delay
4. Tone Decoder-Rejector Countermeasure
5. CTCSS mod
6. S-Meter
7. Scanner-to-Shortwave Interface
8. Carrier-On-Indicator
9. Audio Improvements
10. Beep volume or disable
11. Squelch Improvements
12. Remote Controller
13. Baseband audio outputs
14. Event or "hit" Counter
15. Shielding of plastic cases
16. External DC power
17. Improved Adjacent Channel Rejection
18. Speed up of SCAN & SEARCH modes

Then, maybe...depending....on the scanner.... the following digital and/or esoteric enhancements.....???

19. Interfacing to a computer
20. Subsidiary Carrier (SCA)
21. Extended Memory to 25,600-channels & up
22. Cellular restoration
23. 54-88 MHz restoration
24. Data/Tone/Noise Rejection

==========
026: So how can I do some of these mods?

That's a problem. No one has written them up for your "SnakeBite". About the only way I can think of is to get one or more of my three books and a subscription to the WORLD SCANNER REPORT. Research and study up on the mods we've developed for other scanners, and then compare the procedures for that specific scanner to your "Snakebite". Often, when I write up a mod, I give hints on how to apply it to other scanners.

Also, if you ask me specific questions, I can give specific answers. If you ask me "how to do a memory mod", I'll just refer you to something already in print or published somewhere. If you are doing a memory mod and

run into trouble, then I will help you with that trouble.

==========
027: Memory mods? How can I increase the programmable channels?

That depends on what kind of memory storage system is
used by your scanner. There are three kinds:

1. On-board CPU RAM (Random Access Memory)
2. Static Random Access Memory (SRAM)
3. EEPROM Electrically Erasable Programmable Read Only Memory.

The first kind is most prevalent and there is no way to
expand that kind of memory. It is, however, usually
limited to scanners with 51 channels or less of programmable
memory. 100-channels and up are usually done by methods 2 or 3.
So your first step is to determine what kind of memory is used
by your scanner.

EEPROM memory is expandable, but very difficult under
most circumstances. SRAM is the easiest and offers the
largest expansion capabilities. For example, the
PRO-2004, PRO-2005, and PRO-2006 can be expanded to
25,600 programmable channels (and more)! The PRO-32,
PRO-34, PRO-37, PRO-39 & PRO-2022 can go to 12,800-channels
and beyond. The BC-760XLT, BC-560XLT, and a few others
can be taken to 6,400 channels and more. The PRO-2035
and PRO-2042 can be taken to 16,000 channels and beyond.

My Extended Memory Modifications are amply documented
in excruciating detail in my books and in the WORLD
SCANNER REPORT, complete with diagrams, photos, and
many pages of instructions such that most casual
hobbyists who know a soldering iron from a tire iron
can do the work. This kind of mod is not suited to
being given out in an e-mail or a forum message in so many
words or less, so you will need to acquire the instructions
before doing the work.

==========
028: How do I tell a SRAM chip from an EEPROM from CPU RAM?

If you can't do this on your own or after the below
explanation, you are probably not a candidate for such
a wild adventure at this stage of your hacking career.

Most CPUs hold a small amount of RAM (random-access-
memory), sufficient to store anywhere from 10 to 50, maybe
a hundred channels or so. This is the case for most
scanners, so there is no way to increase that memory.
Fortunately, there are two other methods of RAM used by
a few scanners that offer possibilities for expansion.

EEPROM: The least common and least expansive is EEPROM (electrically erasable programmable read-only-memory). The PRO-43, PRO-26, BC-2500XLT, BC-200XLT, BC-100XLT and BC-3000XLT, for example, use EEPROM programmable memory. It is possible to expand EEPROM-type of memory, though not by such huge proportions as the SRAM type. EEPROMs are usually tiny little chips with 8-pins.

SRAM: A handful of scanners use a separate SRAM (static random-access-memory) chip for storage of frequencies and custom channel settings. It is this type of memory that can be easily and economically expanded by factors of 2, 4, 8, 16 and even 64 times the original volume! Scanners known to employ SRAM memory include the following:

PRO-2004 PRO-2021 PRO-32 BC-760XLT
PRO-2005 PRO-2022 PRO-34 BC-950XLT
PRO-2006 PRO-2032 PRO-37 BC-590XLT
PRO-2035 PRO-2042 PRO-39 BC-600XLT

There may well be other scanners that use SRAM memory, but either I forgot about them or don't know. If you're curious about your scanner's potential for memory expansion, you can just about forget it for those with fewer than 100-channels. The CPU's RAM easily handles 10 to 100 channels or so. If your scanner is not on the above list, but has 50 or more channels, then look over its schematic diagram and parts list or scrutinize its Logic/CPU Board for any of the following types of SRAM chips:

uPD446G-15 TC-5517CF-20 LC-3517BM-15
CXK5864BP MB-8416-20LPF

or something similar, disregarding the last few digits and letters. A SRAM chip is generally characterized by a rectangular shape with 24 to 32 pins, each of the longest sides holding half the pins. An SRAM chip in a schematic diagram will be characterized by eighteen or more of its pins going straight to the CPU chip. Any chip with less than 24-pins is not likely to be an SRAM; neither is any chip in a square format. SRAMs are rectangular (DIP or SMT) with 24 to 32 pins. Pinout notation of SRAM chips will include mystic codes such as:

A0, A1...A9, R/W, CE, I01, I02...I08, OE, etc.

==========
029: My scanner has an SRAM; how do I do the mod?

Get the published instructions for Extended Memory Mods using larger SRAM chips. Start by reviewing the free Table of Contents and Index to the World Scanner Report

where you will find articles on memory mods. Get at least one of my books to supplement the WORLD SCANNER REPORT. The ULTIMATE SCANNER book is probably the best choice.

The Table of Contents and Index to the World Scanner Report can be found on my HomePage and FTP sites as well as on my BBS. They're also contained in my product information file: PRODINFO.ZIP that I can send by e-mail upon request, or which can be downloaded from my homepage, BBS, and FTP sites.

Since all SRAM chips are much alike, my instructions for one scanner will apply to all, and not be that difficult to follow, provided you can find your SRAM chip in the first place.

==========
030: Do you do scanner modifications like memory mods?

Sure. Contact me privately and we can go from there.

==========
031: I'm not interested in all your mods - just one. Will you photocopy the information for me?

Sorry, no. My publishers own the copyright to my books and my company owns the copyrights to material published in the World Scanner Report. It would be unethical, illegal, or both, for me to do that.

If your budget is tight, you can in many cases get basic information for free from my BBS or from me via e-mail and the hard core stuff for $5/up by purchasing specific copies of the World Scanner Report. It is not always necessary to buy my books in order to do the mods. On the other hand, my published mods are NOT the sort you find on most BBS's and Internet sites with a few sentences or paragraphs and maybe an ASCII drawing if you're lucky.

My mods are detailed; well documented; and have excellent graphics, including schematic diagrams, photos, and illustrations. This kind of work does not come for free and I make no bones about it. On the other hand, there is no charge if all you want is how to do simple mods like the cellular mod to the PRO-2006.

==========
032: So how do I restore cellular in the PRO-2006?

1. Remove the top cover of the scanner.
2. Look down inside the front panel behind the #3 key of the keyboard, and clip the exposed leads of the

two coppery colored diodes standing on end. One
restores cellular and the other gives a FREE 25%
speedup of the SCAN function.
3. Replace top cover.

See, that's the kind of stuff I can provide for free.
And I am happy to do so. I do not work for free for
days on end, paying out of my pocket the high costs of
photography, graphic arts, and computer operations with
sweat dripping off my brow..... There is a difference.

If you don't believe it, then grab a few free files off
my BBS and others, and some from the Internet.........
and then invest in a copy of the World Scanner Report
or one of my books.... See for yourself.

==========
033: How can I improve my reception capabilities?

Easy - maybe. Just increase the height of your antenna.

Each 10-ft increment of added height can yield an
apparent "gain" of 3-dB. For scanner signals, 3-dB of
difference can be all the difference between excellent
reception and none at all! There is no substitute for
height of the antenna when trying to receive signals
outside your immediate geographical area of more than
a few miles. VHF and UHF signals weaken dramatically
as they travel along the surface of the earth (ground-
wave); much more so than the spacewave that travels
a couple of wavelengths and more above the earth's
surface. Low antenna heights intercept the spacewave
of only very close transmitters, and the groundwave of
all others. Yes, the quality and type of antenna makes
a difference to a station's reception capabilities, but
the single most important factor is the height of the
antenna, regardless of its quality and type.

==========
034: How can I install the military aero band in my scanner?

You can't, and that's that. If your scanner came with the
military aero band (220-400 MHz), then you're Fat City.
If it did not come with it, there is no way under the sun
of "restoring" it. You can't restore what ain't there.

==========
035: How can I modify my scanner to follow trunked systems?

You can't, and that's that. For one, it would be illegal
to do that according to the ECPA of 1986, but two, the
data formats and software of trunked radio systems are
proprietary and copyrighted by the manufacturer or

vendor and this information is not available to the public, nor even to technical shops. Each trunked system is as different as night and day with respect to all other trunked systems, even from the same vendor. It is possible for the astute hobbyist to gain some skill and fortitude in following trunked system conversations. These techniques are scattered around in various written works, from books, magazine articles, and prefaces in frequency directories...to text files on various BBS's and Internet archives. These techniques, hints, tips, and kinks cannot be recited here in so many words or less. One good starting point might be the preface material in any recent edition of Radio Shack's POLICE CALL books. But in a word, you cannot alter your scanner to follow trunked signals.

LATE NOTE: Uniden has announced their TrunkTracker series of scanners that are designed to follow certain trunking systems. Keep an ear posted to the forums for news of these potentially interesting scanners as they come to market. If Uniden is able to "get away" with marketing the TrunkTrackers in the USA, it might inspire hardware hackers and software writers to figure out retrofit TrunkFollower modifications for certain scanners. For now, this issue seems blatantly illegal and we have to wait and see if Uniden is challenged by the government and/or the trunked system vendors.

==========

036: My PRO-2004 has problems, first mild and now severe. It has been repaired several times. Can it be fixed?

There is a distinct possibility your PRO-2004 has problems with defective solder joints. Back in 1986, there was a production run of the PRO-2004 manufactured with a defective wave soldering machine. At first, it was only marginally defective, but it worsened and degraded with time.

The result, by the time the malfunctioning machine was discovered, was that many defective PRO-2004's had been shipped to market. Some immediately failed within the warranty period and were repaired or replaced. Others didn't fail until after the warranty expired, and were either repaired or junked. Some didn't fail for years.....

Failures appear to come in waves.....periodic rashes. Defective solder joints are a serious problem, because the radio can be fixed only to the extent that it is broken. Repaired solder joints today have no bearing or relationship to those headed for failure in a week, a month, or a year. There is no economical way to repair them all in one fell swoop. A PRO-2004 with defective solder joints is very likely to develop more problems with the passing of time. There can be no guarantees against subsequent related or unrelated failures.

With that in mind, yes I do such repairs, but I cannot guarantee that other failures won't occur. Costs of repair can be high, and I would estimate the first repair tag to be $100 plus return shipping. I know, it's a bum deal, but I can't do any better than that except to offer to buy the unit for my repair parts bin.

I pay $25 plus shipping for defective PRO-2004's in reasonably clean condition. (No basket cases....) You might consider this as an alternative to continued repair bills.

==========

037: Can my scanner be interfaced to a computer for remote and automated control, as well as for programming of the memory channels by the computer? Can the interface acquire data from the scanner and send it to the computer?

In a word, yes. Most scanners "can" be interfaced to a computer for one-way control and automated programming of the memory channels. It is probably not worth the effort and cost for most scanners, but it can be done. These scanners include:

PRO-2004 PRO-2005 PRO-2006 PRO-2035 PRO-2042 PRO-2022
PRO-34 PRO-37 PRO-39 PRO-43 PRO-26

Probably quite a few others are possible, but.......???

There are three scanners that are capable not only of the one-way mode of remote control and automated programming, but also of a "data acquisition" mode where the scanner sends its display (channel, frequency, bank, mode, delay, lockout) and other data to the computer for automated logging and data processing. These scanners are the PRO-2004, PRO-2005, and PRO-2006.

Several companies make scanner/computer interfaces, including: Optoelectronics - Datametrics - COMMtronics Engineering

Each interface has its own unique characteristics, advantages, and limitations, but all are "good" in the sense of freeing the operator from much of the labor and drudgery of scanning. The Optoelectronics and Datametrics interfaces are generally limited to the PRO-2005/5 and PRO-2035/2042.

A "roll your own" computer interface was published in the World Scanner Report, V2N1-V2N6. Another more powerful one was published in my 3rd book, THE ULTIMATE SCANNER (Cheek3)

==========

That's it for now. I will keep this FAQ updated. If you see things that need to be added to it, by all means, let me know. If this FAQ fails to address your question(s), then hit me with 'em again, but be specific. And be detailed with symptoms and observations if you need tech support on mods or troubleshooting and diagnosis. Use e-mail if you can.

If I buy a digital spred spectrum phone, and I phone someone who takes the call on either a cell phone or a 46-49 mhz cordless, will the conversation be picked up by a scanner, eventhough I am sending a digital signal?
If so, there is no such thing as a private conversation, until someone invents a pre-scanning device incorporated in the phone, that like call display tells you what type of phone you just connected too. There probably is a big market for such a device....If anyone markets such a device after to-day's date be prepared to share Revenues with me.
Bye

Mel Robinson

>problem or is this radio destined for the garbage can? when somthing
>does come over it, seams wavy sounding also.
>I would appreciate any help!
>Gary
>

Hi Gary:
It sounds as if you need to go thru the radio and start replacing capacitors.
We have a radio at work that I was asked to look at and ended up
replacing at least 9 capacitors in it to get it going again.
Unfortuanatly I do not have a schematic or the radio in my posession while
writing this and dont know what kind of setup or skills that you have to
do this. I used a cap checker and found quite a few caps that were not
in spec and some just plain bad.
As for the display you might find that replacing (shotgunning) the caps
that develop the voltage for the display are the problem. There will be at least 4
caps of the same value grouped together in the center of the main board,
ofset to the edge that have dropped out of tolorance (low value-leaky).
Sorry that I cannot be of more assistance to your particular radio but it
has been a couple of years since I did this to this radio and it is still
in operation at a news reporters desk. This radio is usually left t
urned on 24 hours a day and they would be a little upset if I borrowed it.
Good luck Gary

If it transmits It's not secure. Both ends should use Wired phones (from which the security isues can be debated at a later time.)

I have read more bad than good about this radio.
However, I've also heard that it has gone thru
several revisions. Therefor you will hear both
good and bad about it.

The only way to be sure is to buy from a
reputable dealer who has a 30-day money-back
guarantee. Give it a try. If you don't like
it, return it.

Hello All,

DAL> (gforce@keyitems.com) writes:
> I was just wondering if scanners sold in Canada restrict the cellular
> frequencies like they are in the US. If so is there another country (perhaps

> Mexico or somewhere in Europe or Asia) that sells unrestricted ones. Thanx.

Europe has some country's where you can buy 'unblocked' scanners, for
instance England and Holland.

DAL> Tandy Corp in Texas) But others are sold unblocked (Uniden, Bearcat
DAL> Icom etc) but you have to search a bit harder to find non-RS scanners
DAL> as RS is everywhere......

Tandy is not existing anymore in Holland, only personnel firms which buy
from Tandy, i think. But there are many ways to buy unblocked scanners
in Europe.

Try Javiation in the UK, they work with creditcard, i don't know the
email-adres, and you can try Paradise-Electronics in Holland
(paradise@xs4all.nl) .

Hope this helped,

Grt, JW.

Way to go Dr. Your right. I for one will get a new BC235xlt as soon as I can get my grubby little hands on one. Features price size and all. Go for it Bearcat keep it up. Anyway when the new feature is added for the other systems I'll trade the old one and buy a new one.

I'm in the military, and currently on orders of Korea (republic of), nedd to know if anyone has any information on the use of scanners in that country.
Currently hava a PRO-2006, and PRO-51, I'm also a holder of a general radiotelephone Operators Lincense (with Ship RADAR endorsement) this is a commericial license, not to be confused with a HAM license. If anyone has any information as the use of scanners in that country, as well as any Frequencies used by the US that can be picked up please let me know.
Thanks in advance

Bob,

I stand corrected. Like I said, I was told this information (by a
dealer) about the circuits being virtually identical.

Way to go Doc. Excellent diagnosis.

Uniden did not include EDACS capability because Ericsson and Motorola use completely different systems. I doubt that you will ever see one radio for all the systems (ever is a long time, and maybe it will happen, but not anytime soon, I don't think). Uniden has an EDACS capable unit in the works, and it is expected to be on the market before the end of the year. Now, will it decode digital, or just work with the analog systems I don't know.

John

Hi ... BAYCITVIDGRP (that's a mouthfull - say that fifteen times after several
Jack Daniels).

Regsrds to the lockout feature, Bill, It's not your usual 'lock-out' feature here. In this case a 'list' can be programmed (with call groups) that you DON'T want to here and then here all others. While 'scanning' the trunked frequencies. What actually happens is the 'call group' assignments handed out by the TSC (Trunking System Controller) are looked at, if it's not on the list (the don't listen list) then you're off to listen to that call group.

This a change from just 'locking out' a call group that's already programmed in the to-be-monitored 'listen-list'.

the
> call on either a cell phone or a 46-49 mhz cordless, will the
conversation
> be picked up by a scanner, eventhough I am sending a digital signal?

The converation could be monitored by a scanner in the area of the 46-49
phone,
assuming that the 46-40 phone has no scrambler or that the snooper is
sophistocated enough to unscramble the scrambled signal.

The digital spread spectrum phone is nominally *harder* to snoop on than
the
46-60 phone, but "spread spectrum" does NOT equal "secure" ... there is a
difference between PN codes used for spreading and "cryptographic" codes
which are used to provide security, however, many people seem to
erroneously
equate the two.

> If so, there is no such thing as a private conversation, until someone
> invents a pre-scanning device incorporated in the phone, that like call
> display tells you what type of phone you just connected too.

Short of systems which would employ true, powerful cryptographic data
security
techniques, there is no such thing as a (guaranteed) private phone call,
even on
a wired phone ...

>There
> probably is a big market for such a device....If anyone markets such a
> device after to-day's date be prepared to share Revenues with me.

On what basis? Surely you jest in implying that you've conceived of
something
novel here????

The real advantage is not so much following "one" police channel, but
to follow only the stations on the trunked system that you want to
monitor. ie you can monitor the Police, Fire, and Ambulance, and lock
out the electric company, garbage collectors, dog catchers, or what
ever agencies are also using the trunked system.

The following letter is being sent directly to officials at HCSO. However, I thought it might be of some use to activists in other communities that have gone, or are going trunked with an emphasis on public isolation.

Hillsborough County Sheriff's Office
Cal Henderson/Steve Mitchell/"John"
Post Office Box 3371
Tampa, Fl. 33601

January 14, 1996

Re: Respectfully Object

Dear Mr. Henderson:

I am writing this letter to express disappointment and shock at the apparent policy of the Hillsborough County Sheriff's Office to prevent its citizenry from passive monitoring of your basic patrolcasts. The recent upgrade to an 800mhz system is a standard advancement that, in its implementation, often makes it more difficult for the public to eavesdrop. Your department is not unique in building this system. The idea of unifying county communications under a single communications network is both noble and efficient. It is consistent with the technological integrity of HCSO, which is superior.

What is unique to HCSO, however, is its apparent hostility and judgment against public monitoring. It would appear that at every intersect of implementing the new system, the agency has opted for the solution that most frustrates scanner users. The statement is clear: the agency does not want John Q. Public overhearing patrolcasts. The system HCSO is implementing not only trunks each transmission, but includes the infamous GE Ericsson scanner-blocking "buzz-saw" which serves no technological purpose whatsoever except to frustrate scanner listeners. Furthermore, there is talk that what little voice communications die-hard samaritans may continue to pursue, will be encrypted. If the structure of the system were not enough, then perhaps the rather unfriendly comments made by "John" , who I understand is the head of the Hillsborough project at GE Ericsson, do convey the message. According to John's very words during a probing telephone conversation in which I sought to purchase an Ericsson radio, your agency is trunked to thwart "people like me". A complete mistruth. Agencies go trunked in order to make more efficient use of the frequency spectrum, and trunking in and of itself does not imply encryption.

He wasn't specific in defining the context of what "I" am, but I'll give him the benefit of the doubt and assume for the moment he meant a cop-wannabe scanner nerd with just a tad too much time on his hands; and not the largely pro-police, law-abiding, general citizen of Hillsborough County who simply likes to be the first to know what's going on whenever possible - and by the way, who may take to voting next election. I don't know to what extent John speaks for the department in defining policy on this issue, but he has assured me that HCSO will in fact allow "select" members of the media to buy these radios, and have them programmed.

Try to understand my passionate feelings on this issue, and my frustration, when I ask the following in complete sarcasm. I am rarely this rude in official correspondence. However, GE Ericsson is a major international corporation. I have to ask: was John last stationed at the GE Ericsson office of the former Soviet Union? There he might not have thought it unusual to make such an outlandish resolve. No joking. I only wondered why he didn't punctuate that comment with an evil laugh!

Indeed, per the article appearing in the January 14 issue of the Tampa Tribune, which I was fortunate enough to contribute many sources of information in an effort to help draw attention to this matter, HCSO does intend to make its programming services available to the "select" media. I assume by comments also made by John that this will include "select" crimewatch organizations. And I can certainly infer that this will include "select" members of the local political infrastructure, as well.

It is uncomprehendable that I will ever fully convey how I feel regarding the right to receive "pure" information and decide issues for myself. John doesn't seem to understand, as may not the department in general, that I am the media. To suggest that people should be satisfied with the limited resources, selective content, and subjection to prevailing political relationships with which the "select" media is in constant struggle, is short of outrageous. I have a slight objection to being a mental slave of Willard Scott. He's great with a cup of coffee, but he and no one else should ever be allowed have exclusive privilege over whether or not I will be told a circle is a square.

My points should demonstrate that there is something more disturbing than the fact that a technical revolution on your part will render my conventional scanner unusable. In short, it's the HCSO philosophy. As discussed in the Tribune article, many agencies regard patrolcasting as a tangible community benefit. Indeed, I believe the process of community policing is more than simply doing and saying whatever is necessary on paper to continue receiving juicy federal dollars. I believe it is taking the initiative and investigating new innovations, and applying no small amount of creativity in communicating with the public. New York's impressive decline in crime, whether you feel that social factors played some role or not,

was based in part on a philosophy of innovation -- not the exclusive implementation of whatever tactic appeared in the last issue of the FBI Law Enforcement Bulletin. New York City led, not followed, itself to a solution using what I describe as "proactive policing".

Locally, Community Policing is the tout, but I find it a stark and dark contradiction of the community policing agenda to value isolation of the citizenry at the basic level, even if HCSO has done a superb job in implementing the doctrine otherwise. It simply makes no sense. The ability to monitor patrolcasts using inexpensive radios was the accidental but first demonstration of community policing. When police agencies first began using radio systems at the high end of the A.M. band some 60 years ago, it was not uncommon for guys "like me", as my friend John puts it, to sit and mentally participate in the policing process. This created an extremely pro-police citizenry, which one police chief was good enough to tell me continues to be the case to this day. I have to agree: When HCSO deputies establish a perimeter, call for air service, send in the dogs, and eventually 10-15 some thug who just knocked over a convenience store, my praise and respect for HCSO is no higher. I and thousands of people like me are your greatest cheerleaders when we can absorb that process for ourselves. If you block that venue, you mute that cheerleading squad. A step backward for one step taken forward in community policing. The idea that police business is police business is the antithesis of community policing, and you should be striving to think beyond that. Whether you think I'm some kind of nut or not, one thing is certain: You won't fight crime successfully without me and folks like me. That's a proven certainty.

Your philosophy exists outside your technical changes. There are things you can do to compensate for the door you are closing if you so choose. I will be highlighting some of these recommendations and suggestions in an upcoming documentary web page that will detail the Hillsborough trunked issue, and serve as a resource for police administrators and media hounds nationwide. For now, these suggestions include: Simulcasting of patrolcasts over local government channels, or even over the Internet. Simulcasting over the old VHF, UHF frequencies. You can even drop the policy of making the receive-only radios available to the "select" media. They are expensive, however, scanner nerds would saw off a limb to have them. I talked with a sergeant in Seattle this morning before tapping this letter. Apparently they have a "citizen access" program whereby anyone who wishes to purchase a radio may do so. The city will readily program them after the citizen has produced a valid ID, and has signed a waiver that he will not resell the radio. Seattle emphasizes my point. They have the same problems and concerns you do. However, their philosophy prompted them to go the extra step and resolve the public in some way. There is no such thing as a "select" media in Seattle, or Dallas, or Greensboro, NC.

I haven't forgotten about criminals. They are a problem and will always be a problem. But road deputies and police officers on the street are frequently dealing with opportunists and thrill-seekers. They are not of the caliber to make much use of police scanners to any significant extent. For that brand, I have no objection to the reasoned use of encryption. Indeed, going trunked generally introduces new and flexible encryption techniques as part of the upgrade. As a pro-technology buff, I say use them and use them aggressively!

I'm only talking about patrolcasting and it's an important distinguishment. When you exaggerate the security concerns, or huff about the fantasy cops that might appear at some crime scenes, you degrade the powerful social benefits that must be weighed in contrast. Most people know better than to put themselves in the middle of an unsecured and dangerous crime scene. Still others have a soul-bent obligation to help when help is too far away, such as was the case when two TPD were shot and lie helplessly dying in a pool of their own blood last year. An off-duty paramedic, listening to his cheap scanner radio in the classical sense of the scanner nerd (he certainly wasn't roaming free-lance for medical situations in which to assist), heard the call and bee-lined to the scene and quite literally saved their lives. The media accounts and the police appreciation awards that followed in the wake of this heroic action, makes the powerful point. We're all involved.

This letter is more for the record than action, but I hope you can see fit to consider these words while implementing your new system. I have an obligation per my beliefs to challenge the current system, because I believe I'm right, and paying attention to me will make your department an even better one than it is today. The scanner issue aside, there is a dire need to promote new and proactive ways for the police to communicate with the people they serve, particularly in this era of technology when excuses for not doing so are glaringly exposed as that: excuses. I mean no malice or hostility in all that I may report or suggest to whomever will listen from heron. I lament that I can only do so little.

When the documentary web page goes up in March, I invite your review and comments. It won't be viewed by the immense masses, but I am extremely interested in presenting your side of the story as accurately as possible anyway. As for the meantime...try not to let the Johns of the business excite you past the important fundamental that police work is public work. People "like me" are no different than people "like you".

Michael:

Have you tried putting the original PC on the *radio* side of the RS232 cable, connected thru a null modem (pins 2-3 reversed) and run a datacomm program like Procomm to see if the data streams are actually being issued from the new PC running Probe? That could go a long way in isolating the problem. If some kind of data is indeed coming thru the wires, you can check parity, baud rates etc with Procomm to see if it's what you expect. If it isn't, at least you'll know its a hardware problem with the new PC. The breakout box will also do that, but the null modem method will allow you to see both the presence of signals and their content. If data is coming but the radio still won't respond, I'd look at the control lines (4, 5, 6, 8, 20 on the 25 pin side) to make sure the new PC isn't doing something unexpected with their levels. Also check ground thru 1 and 7 to make sure that's correct.

I've found flaky PC RS-232 problems like this with my X-10 home automation interface; only one of my PC's (out of five) will talk to the box. None of the others seem to work. Never could isolate the problem.

Best of luck,

Brett

3280. Hillsborough/Tampa Debate Continues

Newsgroup: rec.radio.scanner
Date: 1997-01-26 00:00:00 UTC
From: dpinero@pobox.com
Message-ID: <32f7d393.113451304@nntp.ix.netcom.com>
Source record: 210115

The following is a response to a message I received in the America Online conference entitled "800mhz Trunking" in the Public Safety forum. It addresses an earlier post regarding the public-safety radio trunking issue.

I post it here, with my response, to encourage the ongoing debate over this matter. The responder is BluLine714@aol.com.

Subj: Re:Hillsborough County
Date: 97-01-21 00:04:28 EST
From: BluLine714

I thought one of the reasons we use trunked systems is increased security of communications ? Why on earth would you give a police radio to anyone ? namely the news media ? that is absurd ! they already show up and stick their noses into potentially dangerous situations, we have to keep them safe, at the same time we have to deal with the crisis at hand. Give a police radio to civilians ? your nuts ! who decides who gets one ? What checks will be done to assure this person will use the radio responsibly ? even if it is just a receiver, I don't want to sacrifice what little privacy we have on our police radios to anyone. We have a responsibility to keep information we discuss confidential, is Aunt Marge going to blaber the most recent arrest info because it was Clem's son ? That is really scary. Not to mention the major problems this could cause for Officer safety. Re-think your stand on this issue, I'm not opposed to community police projects or crime watch, but we must draw the line at security issues like this.

MY RESPONSE:

I have to say that between no response to my posts, and the letters of support for my cause, it's great to *finally* get some criticism that I can sink my teeth into! Thanks ahead of time for making some great points.

PS agencies *primarily* go trunked to make more efficient use of the frequency spectrum in their respective geographic areas. Increased security was apparently implied as a selling point by manufacturers on the basis that the trunking process made it more difficult to follow specific conversations. In this way, trunking is more secure. Indeed, many passive hobbyists would just as soon watch TV while auto-stepping through the channels nonstop than put up with all the random, spotty, conversation. If you've been following this group, or Usenet, then you are aware that Uniden has come up with the Trunktracker to monitor Motorola systems, and apparently has a

GE/Ericsson model in the pipeline. A lot of people believe Motorola sold out the protocol that makes these Trunktrackers possible to encourage the purchase of digital systems by PS agencies, but that's probably not true. There are a lot of non-PS agencies that are trunked and should be scannable. The presentation of the Trunktracker has revealed the "trunking is more secure" pitch as the secondary sell-point that it was all along, and some PS agencies aren't happy with that.

As to why you would give anyone a radio to listen in, there are a lot of reasons. But let me start by pointing out that most agencies don't. People who listen in to police calls have been doing so using inexpensive scanner radios. 60 years ago they simply used the high end of the AM radio band where one-way "calling all cars" police broadcasts were made. People could sit up late at night and listen to their tax dollars at work, as well as keep up with the crime in their neighborhoods. In my opinion this innocent model of police communication was the first passive but accidental example of community policing. It was a beautiful model that, IMHO, should be reproduced today over fixed frequencies (much the same way that NOAA broadcasts continuous weather reports over a series of frequencies, police should do the same). Police eventually moved to VHF/UHF frequencies. Little concern, and for the most part beneficial consideration, was given to the fact that anyone could listen in. In cases where casual listeners were unwelcomed, selective use of encryption was applied.

Not until now have citizens been required the precise hardware used by police to listen in. It's not difficult to buy the radios, but in some cases it is difficult to convince the local PS agencies to program them so that they can receive the PS transmissions. Policy seems to vary from agency to agency as to whether or not they will program the radios, but higher-thinking and innovative police departments will do it. Most will do it because members of the community have squawked, and in Florida, Dade County did so after realizing that it might be violating the Sunshine Law (which Hillsborough County seems prepared to ignore), but I remain the optimist and presume that a few have done so in immediate recognition that it's the RIGHT thing to do from a social-beneficial standpoint. The idea that an agency has to be antagonized into a proactive solution is pretty twisted, but lends credence to a long-standing theory of mine: there aren't enough nerds involved in police work. :)

I believe that some agencies only believe their communications should be secure solely because they haven't thought about it. Noncreative police administrators assume that because they deal with security-related issues, they should engage in a policy of complete secrecy. They forget that the primary level of crime fighting they engage in involves opportunists and thrill-seekers...people not likely to make extensive or *effective* use of police scanners to commit their crimes.

If an agency is allowing the public to listen in from a platform of hostility, it's only because the media has the financial resources, and generally the winning arguments, to kick PS agencies in the ass. Agencies get into trouble, however, when they give in to the media to provide radio programming - but don't do the same for the average citizen. I happen to believe that giving a radio to no one, is more respectable than sitting back and selecting who is worthy of access and who isn't. This is treacherous in a free society because it literally forces alliances between powerful media interests, and agents of the government. I imagine most courts would have a hard time understanding why a journalist who earns $6.00/hour is more worthy of access to live government communication than a production line worker earning the same wage in some factory. If this philosophy were allowed to spread, we would all become, as I'm fond of observing, "the mental slave of Willard Scott". Newspapers or TV anchors are NOT qualified to deliver ME my news. This is a very serious issue and will eventually be addressed. Smart PS agencies will do the right thing *now*.

When we talk about crowd-control and "dangerous" situations, we forget that there are already procedures and laws in effect to prevent or manage swelling crowds. Police scanners have nothing to do with the issue. I may show up at a crime scene because I hear a siren just as much as I might because I hear something brewing on the scanner. If you want a story about crime-scene management, consider the story here in Tampa where two police officers, Mike Vigil and Kevin Howell, were shot by an assailant using an assault rifle. They were near death when an off-duty paramedic using a police scanner arrived at the scene and literally saved their lives. So credit doctors who are sure they would have died without the quick action otherwise. You might argue that as a status member of the medical community that the paramedic had a "right" over all others to monitor police calls - but think about it. He was off-duty and monitoring in the spirit of the classic scanner-nerd or concerned citizen, not as some medical professional. He wasn't roaming the city in free-lance search of a medical crisis! And if it weren't for the conventional broadcast of PS communications, he probably would have never heard the call to begin with since PS radios cost $3,000. He'd not likely have such a radio with him, nor would he be allowed to carry one out of a budget-constrained medical facility. It's that simple. And if it wasn't made clear earlier, remember that the curious public IS the media.

As for security, the good news is that going trunked usually introduces a more technologically capable and flexible encryption system as part of the upgrade. Therefore, on specific surveillance or other sensitive tactical operations, it is very easy to encrypt on-the-fly. When I talk about proactive measures to ensure that the citizen may continue to eavesdrop, I'm only talking about basic *patrolcasts*. And as for the invasion of privacy issue, it might be more credible if it didn't only "suddenly" become an issue in the wake of this debate (after all, for 60 years who gave a damn?). In any event, as police might argue to me, everything is available in city

hall anyway. Names, places, etc. Additionally, a swarm of police cars, fire engines, and ambulances in my neighbors yard would already suggest to me that something unusual is going on.

This is a fresh frontier that few people have given any thought to. As you can tell, I believe that any agency serious about community policing starts by promoting openness using any technological advantage that it can, not isolation and secrecy. Equally sickening is the spotty use of fax machines and e-mail that only a handful of PS agencies seem willing to use in an effort to communicate with the public. Why, for example, when a car is stolen, the bulletin can't be faxed to thousands of citizens immediately? A thousand eyes! You can take the possibilities as far as you want - my plight only starts with the open-broadcast issue, believe me. And, the more I rethink my position, the more potential I see for the future.

Thanks again! For more information on this brewing issue, visit my website at http://www.pobox.com/~dpinero. To encourage the right attitude in your own community: Talk and question...talk and question!

>I hope that the scanner manufacturer prevails and that this trunking
>crap will be defeated so that we can all get back to "listening."

You are right that it will be nice to get back to listening. However,
the solution to keeping police agencies from closing their systems to
the public is to convince of them overwhelming social benefit, and the
duty to maintain access in a free society. In Hillsborough County,
Florida the Sheriff's office has said that the "select" media will
have access to its communications while the general public will not.
This state-sponsored alliance between government and media should make
even the staunchest conservative sick to their stomach. NO ONE should
find this acceptable. I don't care if you're Howard Stern or Rush
Limbaugh. It's a universal wrong for a nation like the United States.

We can all marvel at the new Trunk Trackers, but before long digital
encryption will be a *standard* part of every system sold, and not
even a Trunk Tracker is going to help with that. Police agencies must
take a proactive role in keeping the lines open. We as civilians must
demand that they do.

Does anybody have any experience with the Max Systems back-of-set ground plane Hi-Gain 800 MHz antenna offered by Grove? Does it actually do much better for 869-894 than stock set top antennas? Thinking of getting one, any feedback is appreciated...
thanx.

They'd better give access to ALL media or they'll end up in court with
the "unselect" media defending a First Amendment suit!

Hello,

I'm searching for a scanner that also includes 30KHz as one of it's search step options (mine currently supports only 5KHz and 12.5KHz) as well as FAST (turbo) search (100 steps per second or more). I'm looking for a low cost portable unit (up to 250$?), still in production (i.e. old scanners might have these features, but are hard to get). I've seen units that support one of these features, but not both (for example, the BC220XLT supports turbo search, but not 30KHz steps). Extended coverage would be nice but not a must (at least 400-500MHz should be included). Pointers to distributors of such units also appreceated.

Thank's,
techno

Shhhhhh! You ain't 'spose to talk about what you hear over a scanner. ;-)

Yeah, I heard that too... It almost sounded like a ham discussion... back
to this in a second...

From what I understand, "policescanner.com" is a scanner which is cycling
through ALL or many of the LAPD channels... stopping on whichever one is
active at the time... As to the "computer discussion, I figure it was one
of three things... it was on a car to car channel and two nerdy cops were
shooting the bull, it was intermod from a nearby ham, or it was an error
in programming the frequencies into the scanner.

From: grahamd@eniac.seas.upenn.edu
Message-ID: <32eac274.1632470@netnews.upenn.edu>
Source record: 210139

I am looking into various radios but have not been able to find any information in the faq detailing the following:

2M
6M
10M
425-450 MHZ
1.2 GHZ
VHF
UHF
HF
FM - Single Band, Twin band, Tri band
HT
GMRC

Where does HAM fits into this group?
What does DX cover?

Am I correct in thinking that each one is a different way in transmitting and that there is no unit that will transmit more than two of these bands?

How do these compare to each other? I presume they each are used primarily by different groups with different needs (range, ?security?, etc). Who, if anyone specific, tends to use each band? What are the advantages and disadvantages of each?

What different licensces are required to broadcast on each?

I know that's a lot of questions and my sincerest thanks to anyone that has the time to explain the differences or point me to somewhere that does a good job.

This morning I caught a bit of conversation between a unit on the road, dispatch and a second unit on the road, what was happening was that apparently unit 1 was tx in digital mode and dispatch was not and the second unit was trying to help out.

This town recently re did their comm system and changed freqs and apparently added digital capibility.

My question is why wouldn't the be digital all the time, is there a drawback to being in digital full time?

Another town local to me operates their radios in a normal/analog mode and switches to digital when they want to be private, again the question is why don't they go digital full time?

It's probably your older scanner that picks up the cell phone
calls. It was probably made before the law went into effect that
limits mfg's from putting out scanners that will pick up these
frequencies.

My PRO-34 picks them up, but it's an early model. Later models
did not get them.

I heard something similar there. I'm sure it was image interference.
Mine sounded like a phone call being made, but it was
civilian-oriented. They've obviously got one channel in the lineup
that is very susceptible to images.

There seems to be an inaccuracy on the Grove site as well. It says
that there will be information about the Trunk Tracker at its own
website, which Grove says will be www.trunktracker.com. Well, if you
go to that site you will find that that domain is currently being used
by an internet service provider.

On the other hand, if you visit the Uniden website at www.uniden.com,
you will find several new links to pages that are "under
construction", including one that reads something like "special or new
announcements". Seems to me like they are getting ready for something
big! :)

Hi Eric,

Here's the latest on the new system. They'll be using Moneyrola$ Astro radio. It will be trunked. Most likely all talk groups will be digital and the narcs, etc... will be encrypted also.

500.3125 500.4375 500.5875 500.8375 502.4875 502.6625

Monitor now as they are starting to set things up. It may be on line by Spring. Three antenna sites were planned but once they find it doesn't work properly, they will probably need to add more sites.

Tower Center, Yates Drive and the Municipal Bldg are the sites at the moment. Moneyrola of Glen Rock is setting up the system.

Regards,
LGS

Supposedly, there's a way to make it into a 'detachable/remote'
faceplate by taking it apart, and there's simply one cable connecting
the front to the unit.. and the cable can be made longer, ergo, put
the radio under the seat, the 'control' by the 'stick.. =)

Programming any AOR scanner is a pain in the butt. Although the Higher end
ones
do Allow for computer controlled programming IE the 8000 and the 5000 not
sure
about the 3000 though.. I have a AR1000 and if you want to erase memory it
requires going to each channel and programming a 0000.0000 into memory not
real fun with 500 or 600 channels (unless you want to void your warranty
with one of the
"Mod" sites and doing some tinkering).

I happen to also have an AR2700 and programmed it via Computer and its the
only
way I will program it. I won't bother programming by hand on any AOR or New

scanner I may purchase in the future. I will want computer control ability
on any
new scanner with more than 200 channels

But...you have the choice of determining what agencies you want to track...listen to. It's your choice, not the scanner's.

This is waht the unit does: it gives you what you want to listen to.

It's not perfect, but specialized listening is great when you are being kept entertained with that sector...you can always un-hold it and scan the other sections and hold on that new group ....

it's all up to you.....

you decide your listening pleasure

bill conduit

it's reported to be on the market in March or April and 350 dollars plus or minus....

My main reason for wanting to get the trunk tracker is so that I could LOCKOUT or ignore some of the BS that occurs on the private channels. Usually it is a few of the other volunteer fire departments that will go on to private and talk like they were on a CB radio. This really pisses me off because now my scanner is stuck on one frequency and I could be missing out on some good stuff that is going on.

The other reason is so that I could hear any calls for the VFD that I belong to. Because sometimes the Motorola just needs charging, but I need to go somewhere so I bring my scanner. Another edge that my scanner gives me is if the dispatcher dispatches the police to a call for us first, I hear their dispatch and I could get a head start in getting to the call.

.....patiently awaiting the Trunk Tracker.

I'm looking into getting a scanner, Radio Shack or Bear Cat. I might go ahead and get one of the new ones since I've seen a lot of favorable comments about some of them (as far as their memory and rapid scanning ability), but still... I haven't purchased anything yet... and I'm open to offers on a cell-"modible" older one.

I've seen some of those for sale in other states, but I'd prefer to inspect it before I puchase. I live in Orange County, and will drive an hour or two from here if you've got a good one for sale. (If you live elsewhere, and you *really* don't intend to to rip me off, you can drop me an e-mail anyway.)

And you did nothing more (i.e. no soldering, clipping?) The information
I've found on the net leads me to think that if you want cellular, find an
old scanner, or settle for images on the Pro-51 and 25, or downconvert one
of the good triple-conversion scanners.

The Pro-60 and 62 sound interesting, I've really seen few negative comments
on these scanners either on the web or in my many exhaustive searches
through DejaNews tonight.

How could they be "virtually identical?"
The PRO-26 has 2 circuit boards and the BC3000XLT has 3 boards.

The two scanners are *very* different in the feature, frequency
coverage, firmware, and performance arenas, too.

I tested a PRO-26 and two BC3000XLTs. The BC3000XLTs had superior
VHF-high band image rejection, better audio, and a larger speaker.
The PRO-26 wastes time scanning empty memory channels and lacks
a frequency query, but has a larger, higher contrast LCD.

For a 2 page article covering the differences between
the PRO-26 and BC3000XLT, see August 1995 Monitoring Times.

Message-ID: <32EC7E3E.5CC2@zelacom.com>
Source record: 209770

Fellow Listeners,

It is my intention to create a reference product for emergency communications that will encompass the entire network of emergency service providers throughout the country. These reference volumes will be created primarily for the use of control centers and service providers to provide an accurate listing of resources available in neighboring communities, in the event of a major incident such as earthquake, hurricane, or other mass-casualty incident (such as a nuclear reactor explosion).
I realize this task will be a large burden to complete, but I intend to center around major cities, and include outlying areas in the package. I have not yet decided on which cities to begin, and those decisions will depend on the responses I receive from these mailings.
I would appreciate if you would send any information about your area you might have (including frequencies, procedures, equipment, addresses, personnel, contacts, ham radio networks, local laws, district boundaries, unit numbers, geographic information, service providers, or anything else) to me via e-mail to 'campguy@zelacom.com'. If you would prefer to photocopy information to avoid typing, you may mail me at Wormuth Companies, Post Office Box 481, Ellenville, New York, 12428.
I would appreciate any assistance you could provide. It is my hope that the public will benefit from my efforts, and that you will benefit if the need arises. I have spent two years laying the groundwork for this undertaking, and I have the resources, equipment, time, and desire to make it happen. The only thing missing is the information. I have thousands of pages of material already, but it is not enough. With your help, and the help of those like you, we may just save a life.
I thank you for your your time, and I look forward to hearing from you.

Jeff,

Well, from what I've been able to gather, the ICOM R-10 is a nice radio with lousy firmware, it will need some time to get the bugs worked out just as the AR-8000 did.

I love mine, even though it has a few shortcomings, intermod and images are not among them. I live in the Salt Lake Valley, which is a giant bowl that traps RF, so I have tried many a scanner, base, mobile and handheld. Of all the handhelds I've tried, the 8000 is far and away the best.

Another nice feature is the audio, very hefty sounding, not tinny like tbhe Radio Shack handheld scanners I've used lately. The 1000 channels divided into 20 banks is another nice feature, and although some people gripe that it's difficult to use certain features like linking banks, a couple of hours with the manual makes all the difference. I use many of the features on a regular basis, and I feel it's almost as easy to use as those "dummy proof" handhelds. More features require more knowledge, plain and simple...

The alpha-numeric display is so nice, having each frequency tagged with an identifier has been a blessing to me, I have most of the channels programmed and there is no flipping way I can remember all the frequencies and what they are for.

There are two shortcomings that I can think of, one is "audio clipping" from slightly too narrow filters in the AM airband and in the FM narrowband cell phone frequencies (ooops, did I say cellular? I don't listen there, of course...) Cellular is often modulated up to 8 khz and it gets chopped off in the 6 khz filter.

There is a mod to replace the filters if the clipping bothers you, let me know if you want the info on that if you buy the radio.

The other shortcoming is there is no separate power / charge jacks. You can't run the radio on external power without taking one of the batteries out, or they will overcharge. This shortsighted blunder on AOR's part is inexcusable. Even the cheapest Radio Shack scanners have a separate jack for power and charging.

HF performance is pretty good unless you hook up too large of an external antenna, then it's overload city. But since most of us use dedicated shortwave receivers, it's not a big issue. I take mine on short trips to listen to the big broadcasters, which it picks up just fine, especially away from AM band QRM, which is what overloads the receiver in town.

I personally would shy away from the ICOM until it's tried and proven. They pissed off more people than they care to admit when they went to the policy of excluding the entire 800 MHz band, which they restored in the R-10 and 8500 (excluding cellular). I'd wait though.

Hope this helps, happy scanning!

I had a chance to play with the new ICOM scanner over the weekend. It is a slick unit that will give the AOR8000 a run for it's money. Computer control is great & has jack for Scout control. I have the 8000, but this new ICOM looks like a toy to have. NO comparison to the ICOM R1. This new unit has a much better front end and is light years better than the R1. ICOM has a warehouse full of them, they're just waiting on FCC type acceptance before they can sell or offer to sell the unit according the the ICOM employee-friend that has a pre-release model. May want to check it out before making a buy decision.

>check first in case my info is outdated.

When I talked to some ppl in Mexico, the informed me that it
was illegal to have sell scanners. Canadian scanners are usually about
the same model as in the United States. The Canadian Radio Shacks do
not have any scanners that have cellular enabled....but...There are
some places in Canada that do sell scanners that are able to pick up
cell phones. These usually are the UK models. The UK Radio Shack
models can pick up cellular right out of the box. The new Bearcat
scanners supposedly will not pick up cell even if they are the UK
models. They must be trying to save $$ by making all models the same.
It is odd since Uniden makes some of the RS models that are cellular
enabled.

Does anyone have any good federal govt freqs in DC. I monitor what I can of the Secret Service most is DES encrypted but I have heard some interesting stuff on the Uniformed freqs. I also hear good stuff on the Capitol police and Park police freqs. I listen to the listed freqs for the Marine 1 helicopters but rarely hear anything interesting. Has anyone tried scanning the details of the AG, Sec of State, or other govt high-ups, are they DES too?
Any interesting freqs would be appreciated If anyone needs uniformed freqs etc e-mail me thanks

Eric,

Tx/9

Rx-10.7/3

There is either a "PL' reed that plugs in, or a custom Single Inline
Pin device with the "PL" code stamped on it.

This device also plugs in.

Both are found on the top board at the back of the chassis.

You must remove this board to see the "PL" device.

A "DPL" radio will have the second type of device with a "DPL" coce
printed on the side of it.

Regards,

Z

Correction: Image reception is the technique Democratic party activists
allegedly used when Newt's conversation was intercepted and recorded. I
didn't mean to say they used a 760XLT scanner. If they used a 760XLT the
going price would be much, much higher. (Perhaps Radio Shack could do
a Martins autograph model...)

T> I think I know the history of the DARKSTAR callword's connection
T> with the "TR-3A." This is speculation, and I'm welcome to
T> correction.

No, it's even simpler than that.

The Darkstar is a Tier 3- (Tier 3 Minus) UAV. Now if you say "tier"
as about 1-1/2 syllables, as do I, it sounds a lot like "TR".
Furthermore, the Tier designation system for RPVs and UAVs popped up
about when the TR-3 was appearing.

It's an easy mistake to make, at least it was for me. I was sure we
were getting the TR-3 Minus program here at Dryden, assuming the TR-3
was the designation and Minus was the name. I was really surprised
when I finally saw it written and connected it with all those articles
I'd been reading.

T> So the DARKSTAR/"TR-3" connection is pretty lame, especially if
T> you know what a poor source Douglas is when it comes to military
T> communications -- Steve Douglas isn't exactly 'firing on all
T> cylinders' of his pulse-detonating wave engines,' as the saying
T> goes...

Lame, maybe, but an easy mistake.

Anyway, the Tier 3- Darkstar looks nothing like the TR-3 proposal.
The Darkstar looks like a miniature B-2 fuselage with U-2 wings (I'd
have named it the UB-2, but that's just me) and the TR-3 looked like a
very miniaturized B-2 or a somewhat oversized boomerang.

T> DARKSTAR (usually with a suffix like CHARLIE, MIKE, etc.) has
T> been an unclassified, static callword used by 965th Airborne
T> Control Squadron E-3 AWACS communicators & battlestaff for many
T> years.

Not having paid any attention at all, I'm not sure what the Darkstar
project uses for a callsign. Of course everyone talking is on the
ground, but I'm sure they have to talk to ground and the tower during

operations.

I should mention that the vehicle is sometimes rather cruelly referred to as "Darkspot" these days, in honor of the big black spot it left on 04 when it crashed and burned.

Apart from the pesky antenna configuration, I think that LACROSSE is one of the better characterized spook.birds ...

> It would be just *too* fun if they were
> masquerading her as a DMSP or some such thing.

This is observationally constrained... "LACROSSE" spacecraft are indeed observerd optically, and DMSP both optically and radio, and there are no surplus DMSP birds floating around....

> If it is a radar imagery satellite, then presumably it has a
> radar on it
> Does anyone have any data on any signals coming from any suspected
> Lacrosse satellite? Has anyone collected it

I have raised this question in the past, and the answer at the time was that the anticipated operating band [8-15 GHz??] was effectively outside the range of amateur capabilities. Although this answer was not obviously correct to me, it was provided by someone who obviously had vastly more practical knowledge of the matter than do I.

> There must be at least a dozen
> governments around the world who've torn that signal apart

yes

> any of them publish?

no

>What are the "approved" frequency ranges for space radar usage? Or
>could the US be sneaking the signal in under the rubric of "telemetry"
>or something similar?

You raise interesting points here, and perhaps someone could address them.

My one reference metric is that for many many years the USofA was using the civil Ka band for SIGINT downlinks [they started using it before the WARC-83 [?] divided Ka between civil and military] and this fact was not apprehended until last year when the ITU started doing allocations for mobile Ka for Teledesic, and lo and behold the USofA registered a whole

mess of spacecraft in the civil band etc

> Current radar satellite signals are generally in the 1-5GHz range

For higher resolution applications I would expect LACROSSE to be upwards
of maybe 15 GHz ...

Who would help me ?

I'm intrested in everything about ACARS
I have found a schematic to build a ACARS interface. I can't test the interface because i don't have the program to decode them.

Who would like to send me decoder software via email ? (something like LOWE)

I'ts above my budget to buy a LOWE interface with the software, if i could test my interface i could affort it.

So to all spotters, radio amateurs... who send me software to decode ACARS (maybe there is schareware to decode them ?)

If you have any other suggestions to help me and it's about the ACAR system, be free to email them.

THANKS VERY MUCH !!!!

3358. AOR-8000 comments?

Newsgroup: rec.radio.scanner
Date: 1997-01-27 00:00:00 UTC
From: Jeff Kilgore <kilgore@tivoli.com>
Message-ID: <32ED1C3B.7E4C@tivoli.com>
Source record: 209935

My possible choices for a new handheld scanner have expanded, and I am now looking closely at the AOR-8000. Having been spoiled by computer control of my desktop scanner, I really would like this feature in my new handheld. Any positive or negative comments on the AOR-8000?

I have a couple of specific questions/concerns:

1. Has anyone experienced intermod/overload problems with the AOR-8000? I am a bit leery of such a wideband receiver. I don't mind the extended coverage otherwise, but will probably rarely use it below 30 MHz. (I have plenty of SW equipment made especially for that purpose.)

2. I take it that you need the optional cable to connect the AOR-8000 to a PC. Is this correct?

I might almost consider the new ICOM (R10?), but 6 channels/ second is really abysmal and I can rule it out on that count alone.

Thanks for any comments.

Jeff Kilgore, KC1MK

Hello,
Does anyone have a list of frequencies for the Iowa City
area? I am not having much success finding police, fire, etc.
with the older RS scanner that I have just inherited. If anyone
knows where I can find a list of Iowa City & U of Iowa
frequencies I would appreciate a URL or a text file that
would get me in on what is happening in my home town.

Thanks,
DianneRM@aol.com

3383. Pro-26 or Pro-51?

Newsgroup: rec.radio.scanner
Date: 1997-01-27 00:00:00 UTC
From: influx@deathsdoor.com
Message-ID: <32ed2424.5001833@news.whc.net>

I am interested in getting started with the Scanning hobby... I have no real experience with them yet... However from reading the newsgroups and surfing the web I seem to have settled on the Pro-51...

So I browse the local radio shacks and talk to some of the reps there... Today I was talking to a female employee who after showing me the 51 brought out the 26 saying it was the latest top of the line from RS... Of course there was the increased number of freqs, but she mentioned the fact that it would be able to track conversations that skipped freqs... What exactly does this feature do for me? I live in the El Paso area, I have no idea whether or not its trunked or not...

I would think this area would be good, because its in close proximity to an Airport, Military Base, the border (border patrol, DEA(?), FBI (?)) I would like to be able to listen to as many different things as possible, but wouldn't like to pay an extreme amount... I was told that when the Pro-26's go on sale they are usually discounted 100 to 150 off the base price... Would I be better off with the 51 or the 26?

Also how do you tell what the latest models are? Why is the 26 a newer model than the 51????

How are you and your monitors going to avoid prosecution for violating Section 705 of the Communications Act?

Before anyone starts flaming me, remember that I'm one of the ones that believes we have some silly laws on the books, and I'm well aware of the "Gingrich" situation. However, profiting directly from intercepted radio communications is still illegal in this country. I'm interested in how this individual plans to justify this apparently felonious activity.

Modifying the Pro-60 would reguire replacement of the main CPU. Radio Shack built this into the newer scanners to prevent people from modifying them. Unfortunately the CPU is soldered in place and I am not aware of how to get the replacement CPU that has the unblocked frequencies. Sorry. If you find something different please post.

Even better, buy a second receiver using a differently directed or
polarized antenna, then get an adapter (or build one) that puts Radio
A in the Left Ear, and Radio B in the Right Ear.

Tune both radios to the same station, and you have a poor man's
version of diversity, and much better reception/audio than listening
to a single radio by itself.

One receiver ... but a dual design would certainly open
things up for new features (like a 'trunked priority').

A dual receiver is not necessary. A single BC760XLT or
PRO-2006 as our prototypes use are more than adequate. The
BC760XLT has some inherent problems (as we found during
development) but still only a single receiver is required.

> other for voice) or can it only decode one talkgroup at a time?

Well, yes, only one 'voice' channel can be tuned in at a
time - so only one trunk 'call group' at a time.

Arron

TV signals are horizontally polarized and many (most) other VHF/UHF services are vertically polarized (like the rubber duck). Rotate you antenna, so the elements run up and down, and it should work over the TV frequencies. The TV channels are on 54 - 88 MHz (Channel 2-6), 174 - 216 MHz (Channels 7-13), 512 - 806 MHz (Channels 14-62) so you should be able to use it at least in these areas. Between the band the performance probably drops off.

The TV antenna has an impedance of 75 Ohms instead of the scanners 50 Ohm input, but this is of little importance in a receive only setup.

TV antennas are mostly directional while scanner signals could come from anywhere, so consider your geography and/or a rotor. Good Luck.

108-151MHz, specifically 138-144 & 148-150 AM mode, although some squadrons will also use discrete freqs in the 118-137MHz. Most F-16s also have 30-88MHz FOX-MIKE, too, and if they're in a restricted range or MOA, they might be using discrete 225-400MHz for tactical air/air.

Wartime plans have them using UHF (clear or HAVE QUICK) for a circuit with their handlers like AWACS, Control & Reporting Center, ABCCC, etc. VHF (clear/secure) for Interplane, and 30-88 (clear/secure/SINCGARS) for back-up & coordinating with other ground forces.

If they 'fight the way they train, and train the way they fight,' listen for their tactical & BS comms on 'Victor.'

Tim

I am looking for .wav files of radio traffic from LAPD and/or LA Sheriff's Departments. If anyone has some they could share with me via email or post here, I'd sure appreciate it!

Thanks!

Don't know if I have what you are looking for, but I have 2 scanners for sale.

1. R/S Pro-46 handheld, 100 channels, modified for cellular.
BRAND NEW IN THE BOX Asking $200

2. R/S Pro-51 handheld, 200 channels, also receives cellular.
BRAND NEW IN THE BOX Asking $250

Let me know.

3405. Lawmaker Calls for Hearings on Scanners !

Newsgroup: rec.radio.scanner
Date: 1997-01-27 00:00:00 UTC
From: postmaster@127.0.0.1
Message-ID: <5chld0$i8p$1@natasha.rmi.net>
Source record: 209982
Cross-posted to: rec.radio.scanner,alt.scanner

I saw an article this morning in the Colorado Springs
Gazette concerning scanners and 800 MHz celluar
reception. Rep. Billy Tauzin (R-LA), incoming Chairman
of the House Commerce Committee's Telecommunications
sub-committee wants to hold hearings in early February
on strengthening the law on making it hard to re-configure
scanners so that they can receive celluar frequencies.

This is after Newt Gringrich was caught talking on a cell
phone with a scanner. This anti-mod law went into effect
back in 1994, passed not too long after Gov. Wilder,
then Governor of Virginia was listened to.

Kinda' intersting that every time some politician
screws up and get's caught with their "pants
down", the citizen has to pay with a more stringent
law that has to be complied with. Well, it is time
that we don't need to put up with more and more laws
that punish citizens everytime someone screw up. The
current anti-scanner law and the EPCA of 1985 with
amendments ought to be taken off the books. The airwaves
are public and we have a right to listen in. If the Celluar industry
does not want us to listen, they can spend about $25 to program
the phones so as they cannot be eavsdropped on. There is
one simple rule that we forgot, if the radio signal goes through
my body, goes through my property, then I have every right to
listen in on it. If I go outside and look out of the backdoor and
see into my neighbor's yard, I have that right. If my neighbor
does not want anyone to see their property, they can put up
a fence. The same goes for the Celluar industry. They can
protect their property with a fence called a scrambler.

This law should have a sunset clause since the technology
is going to digital.

Well, anyway, I'm off my soapbox.

Brad

I cannot agree more. The next thing will be that all systems will use digital encryption (known as Securenet where I am). I just hope that someone, somewhere, will create a device that will decrypt this "security feature" as they probably will call it. I know that it isn't so bad with the encryption where I live, they only use it when they are dealing with drugs, juveniles, or other sensative information. One good thing is that the Securenet code in the radio can be lost if the battery is disconnected or dead. If the radio is out of power for any amount of time, the code is lost and must be reinstalled by a very simple process. And there are sometimes when the coded transmission will not be decoded clearly so usually after a few transmission with a response of HUH? They usually turn off the encoding on the radio.

semi-patiently waiting the arrival of the TrunkTracker to purchase.

Hello everyone. Pardon me for asking anything that has already been asked resently...but I am new to this list...just found it tonight in fact. I am interested in a list of frequencies. I have the standard police ones. I am looking for some of the more interesting ones such as cell phones, resturants, anything that can be scanned. I am not using the most sophisticatied motel scanner...a Realistic Pro-57...but I resently received it from someone...used...and am beginning to play around with it some. Thanks for any and all advice and information!!

First off, the 230 is the same as the 220 but with an extra
battery and charger. The 235 will be a 230 with "de-Trunking"
capabilities. What is a 225? The 3000 is a great radio(and
it's a big sucker too! ;-).
If you really want de-Trunking, wait for the 235. If you
could care less and can afford the extra $, go for the 3000.
If money is a little tighter, opt for the 230(or a 220 if
you can find one). I would pass on the Sportcat...100
channels is getting tight these days and I really miss
the programmable search when using this radio!
Good luck!

Strong signals,
Rich Wells

If you go to http://members.aol.com/wwhitby2/trs.html , you will find the Trunked Radio Systems User's Page. The TRS User's Page ISN'T under construction - I have been collecting and posting information to the web about the trunked radio systems used by different agencies since early February, 1996.

All of the information (except for a few systems I have monitored) are sent in by people who have actually monitored the system or know about it being implemented. Right now, I have information pertaining to over 40 states and territories, as well as several foreign countries.

I am always looking for new information. If you don't see your state or city listed, how about sending me the information on their TRS?

A used Radio Shack PRO-2005 (in excellent condition)
is the best value for a base scanner radio in the $200 - $300
price range.

They are undervalued on the used scanner market.

It is NOT the only way. You forgot to mention an external downconverter
which can in fact move the entire 800-900 block down to a 100mhz block
which the scanner can manage. Such a conversion can have a correlation
to the readout. If the converter's oscilator 400 mhz, then the readout
on the scanner would read exactly 400 mhz lower than the frequency it
is receiving.

3427. Yupi 9000

Newsgroup: rec.radio.scanner
Date: 1997-01-27 00:00:00 UTC
From: alleycat@netcom.ca
Message-ID: <32ecbb94.250688160@nntp.netcom.ca>
Source record: 210004

I just picked up the new Yupi 9000, and I am having a blast with it. But I have no english instructions for it. If anyone has them can you please let me know. I did figure out a few cool options. (1) the snooze option power saver is great, and the personal info on startup is wicked. So now when I turn it on it says my name and if I want my address and phone number. I have been comparing my Yupi 9000 directly to my Aor 8000. The quality of the two units seems to be on par with a slight edge to the yupi on the 144 Mhz and short wave. The 8000 seems to have an edge on the 800Mhz .As soon as I figure it out i will post more.

Hi there. I am putting together a documentary web site that highlights police radio issues. I am in *desperate* need of the recording of the New Orleans police officer shouting to "Kill the mother fucker, kill the mother fucker" over the air, with the timid police dispatcher trying to shut him up.

Many of you will recall this case. The New Orleans police department chased down a police killing suspect, held him for several mysterious hours at a local police station, and then spit him up on the hospital doorstep where he died of massive beatings.

I want to include a partial .wav file of this recording, but lost the one that I had.

Please help!

Thanks,
Dave

Well Brad, I couldn't agree with you more. I personally don't listen to cell calls, i usually don't have the time. I am usually listening to PD or FD calls, and that keeps me busy, however when someone says they're going to take something from me becouse it hinders thier privicy i begin to question. Making it illegal to produce a scanner incapable of recieving cell phone freqs is just plain stupid. This is the United States, we have the freedom of speach, and should have the freedom to listen also! If your nosey neighbor wants to listen in your phone conversations then he/she should. If you have a problem with it then you should buy a better phone. The same goes for me and everyone else that owns a cordless phone, they claim security, but why should i care, im not doing anything illeal or to be ashamed of. Maybe our senators and other "officials" are, thats why they don't want to be monitored!!!!!!

3430. FS:Nova Scotia Freq.

Newsgroup: rec.radio.scanner

I have Nava Scotia frequencies for sale. This 3.5 disk contains over
200 pages of frequencies per file (1 meg x two files) and has both the
input and output frequencies of everthing that is not protected.
E-mail me and get yours now for $ 10.00 per disk or I can e-mail your
files. Do not delay and do not beleive those BOOKS because they anly
have 1/16 of the numbers that you need to listen to everything. My
lists tell you what freq. to listen to in your car on VHF to hear
ATV/ASN news broadcasts and what freq. that retransmits RCMP . Has
all the fast food frequencies and airport freqs. as well.

The Yupi 7100/7200 always had a slight edge in sensitivity over the
AR8000, and the MVT-9000 seems to be similar. Also, while my older Yupi is
swamped with intermod in the 476 MHz range (where all the NYC police
repeaters are .. groan) it seems the 9000 is very very clean. So this is
more than just a 'features' upgrade.

JL,

Remember, while decoding a digital mode of transmission is legal, decoding an encrypted transmission i.e. Securenet, is not. Because of that, I don't think you'll see a mainstream manufacturer i.e. Uniden, AOR, etc., market a decoder. If there is one built (or the software written) it will likely come from the hacker community.

Hi Jeff,
I don't know much about the Pro-57 but if it has a "search mode", try
the ham bands (144-148) & (440-450). Those are good places to pick up
useful info. on radios in general. Also, 450-460 should yield news
media and other utilities such as AAA dispatch. Best wishes!

I need some help finding someone to repair an elderly Uniden BC 600 -- if I remember the number correctly = its the 760 without 800mhz. Has no audio output. Anyone have suggestions on an individual/company that does reasonably priced repairs ... its not worth all that much but it serves my purposes! Dave, Atlanta 404 378 5468.

3442. Ron Bruckman featured in Baltimore Sun

Newsgroup: rec.radio.scanner
Date: 1997-01-27 00:00:00 UTC
From: rttyman@wwa.com
Message-ID: <5cgrbfkcf2@kirin.wwa.com>
Source record: 210045

The following article appeared in The Sunday Sun of Baltimore, MD, on Jan. 27, 1997:

Scanner owners pick up an earful

Eavesdropper: Carroll County resident Ron Bruckman's scanner has let him monitor what famous, and not so famous, people talk
about. And it's legal.

By Dan Fesperman

SUN STAFF

Whenever Ron Bruckman wants to reel in some free, gossipy entertainment literally out of thin air, he moseys down to the
basement of his Carroll County home, flips a few switches and lets the good times roll.
Perhaps today he'll tune into Sly Stallone bad mouthing a Hollywood pal over the telephone, not in a movie but live from some
private jet. Or maybe a general with loose lips will blab a military secret, like the one Bruckman heard on the eve of the Persian
Gulf war. Possibly a careless CEO will drop a hot stock market tip you won't read about for weeks, or, closer to home, the cops
will be chattering about an impending drug raid. Better still, maybe that young couple down the street will decide to, how can we
say this delicately, let off some steam in the bedroom after forgetting to turn off the baby monitor.
Either way, Bruckman and more people than you'd care to think can tune right in. And it's all legal.
Even if Bruckman were willing to cross the line by eavesdropping illegally on conversations from cellular and cordless telephones,
it's not like the Federal Communications Commission would be knocking down his door an hour later. The airwaves may have
laws, but try finding a policeman.
Thus do Bruckman and thousands of other Americans routinely plug into all manners of communication, whether you like it or not,
employing the same relatively inexpensive technology that recently made the news when a Florida couple taped a phone
conversation of House Speaker Newt Gingrich (although Bruckman and other knowledgeable scanners are convinced that the two
either lied about their technique or were acting as a front, but that's another story).
Like other such incidents in recent years -- involving everyone from the governor of Virginia to Prince Charles -- the Gingrich case
has highlighted just how easy it is to listen in on almost any communication that travels by air, however briefly. And if you doubt
that anyone has the time or inclination to eavesdrop, then you haven't been reading publications such as Radio Monitors
Newsletter of Maryland, which Bruckman mails out every month to 450 subscribers, or

Monitoring Times, a nationwide magazine
circulating to tens of thousands.
"I know some people who can't get up in the morning without turning their scanner on," says Steve Uhrig, president of SWS
Security, a Harford County manufacturer of surveillance equipment. "They take it with them into the bathroom; and when they take
a shower, they turn it up so they can still hear it."
Or they take it in their cars, on the bus or to the airport, eavesdropping on everyone from mall security guards on walkie-talkies to
fast food employees chatting by the microphone of the drive-in window.
Consider the fellow named Rick, who thanked Bruckman in a recent newsletter for "those frequencies you gave me for Green
Ridge State Park. It was definitely cool listening to the rangers checking up on campers that were being too rowdy. For the first
time in three years I wasn't feeling left out. Next time I go I'm going to take my extra base unit with extension speaker for better
sound."
Bruckman, 45, started listening in 1975, but he didn't start his newsletter and monitoring club until 1989. He makes some money
from the $15 annual memberships, but not nearly enough to quit his job as a production maintenance supervisor for a snack food
manufacturer in Hanover, Pa. He also moonlights as a Hulk Hogan impersonator.

In-flight phone chat

Seated in his basement radio room yesterday, he explains scanning's appeal by pointing upstairs where his daughters are watching
television. "They're glued to it," he says. "Same old crap. But here you don't know what's going to happen." And on no frequencies
is that more apparent than the ones for in-flight telephone calls.
They're his favorites, and so far he's picked up, to name a few, Bill Cosby, Jane Fonda, Tommy Lasorda and Don Johnson,
chatting away unawares. For a while there was no better weekly entertainment than Sylvester Stallone, on the phone during his
regular Sunday private flight to Hilton Head, S.C. If these things were rated, Bruckman would have given the Sly-line an "X."
"I mean, the things that the man was saying about other movie stars, and about his own family, and what he was doing on the
airplane with these women," Bruckman says. "You could hear what he was doing. It was very, uh very interesting."
The only target who ever seemed aware he might be overheard, he says, was Ross Perot, who remarked that he didn't want to
speak at length until he was "on a secure phone." Contrast that to the callow Dan Quayle, who reputedly entered scannist lore by
blurting out his home fax number during an in-flight conversation."
But why worry about the Stallones and Quayles when there's plenty going on in your own neighborhood via baby monitors,
wireless intercoms, and cordless and cellular phones. For some people in large apartment buildings, Bruckman says, such listening
becomes an obsession, never mind that much of it is illegal. Not that he'd ever do it, he adds.
"Those people walk down the hall and know the life story of everybody in the building --

who's doing who, who's got what, who's
selling drugs -- without even talking to the people. Now would those people rather go and watch `Days of Our Lives'? Or are they
going to sit down and listen to the real thing. I don't call it Neighborhood Watch. I call it Neighborhood Listen."
Congress and the FCC have tried to stop such monitoring by regulating scanner manufacturers. Machines made since 1994 can't
pick up cellular calls. But, as security expert Uhrig points out, "It's easy to convert them. Anybody who's not afraid to take off the
cover of their radio and pick up a soldering iron can do it." And there are plenty of manuals and Internet sites to tell you how.

Listening is easy

Bruckman offers to demonstrate just how easy it is to listen in to a cellular phone, and he begins pushing buttons while offering the
disclaimer: "I don't normally listen to these."
Almost instantly the scanner locks onto a call, catching a woman's voice in mid-gossip: "She is the biggest snob, I'm telling you."
He pushes another button. Another call pops on the speaker. It's a neighbor this time, and she's talking about him. Thus does a
hobby become a temptation.
But often more worrisome to government officials is the ease with which scannists ferret out channels designed for greater secrecy.
Bruckman, for example, likes the challenge offered by the Mystic Star frequency, used for special air missions. He swears that two
days before the U.S. launched its first gulf war air strikes against Iraq, he picked up top brass "setting a strategy on the exact time
they were going to go ahead and start bombing."
The December issue of his newsletter couldn't have made many friends in government when it published 38 frequencies used by
the Multi-Agency Drug Task Force Team, along with tips on how to eavesdrop on U.S. Customs. Not as if you couldn't already
find such information from guidebooks like CRB Research's "`Top Secret' Registry of U.S. Government Radio Frequencies."
"We recognize people's rights to listen in," says John Ramsey, spokesman for the Association of Public Safety Communications
Officers. "The only problem is that it becomes a safety issue sometimes for our officers on the streets. When a SWAT team is
closing in for an operation, the last thing they want is somebody listening in on their tactical conversations."
Such concerns could spur further legislation, but the scannists will probably always find a way to get around the law. "That's the
nature of America," Bruckman says. "We're a nation of eavesdroppers."
Besides, he adds, for the most part their intentions are honorable. "If I happen to hear something that is some good stuff as far as
some smut like Star magazine or the National Enquirer would love to have, my motive is not to sell it. We're not out to nail
somebody to the cross, like the people supposedly did [to Gingrich]. Our objective is curiosity."
You can reach Ron Bruckman by e-mail at RBscan@aol.com or by mail at Radio Monitors of Maryland, P.O. Box 394,

Hampstead, Md., 21074-0394.

I have acquired a vintage regency "K100" scanner. It dates back to March of 1981 (Originally Purchased 03/19/81). The unit can accomodate just about anything from 30 MHz to 512 MHz. Though this model skips 51 MHz - 137 MHz (Commercial FM Radio Broadcast Range?), and 170 MHz - 440 MHz.

I am looking for a means of updating this scanner to address the higher band ranges (512 MHz and above), including 800 MHz - 900 MHz. Does anyone know of a way to do this.

Please e-mail: 74723.577@compuserve.com, if you can assist.

3446. AR2700 Serial Interface

Newsgroup: rec.radio.scanner

Heh-heh! I'm cautious about drawing similarities between the gun
control argument and the open broadcasting/scanner control argument.
In the former case you are talking about taking away the gun that
shoots the target. Agencies that want to encrypt all of their
communications for a closed system, want to take away the target that
the gun shoots.

I took my BC9000XLT, simulated your situation...mounting the scanner with the control panel facing up (on top), and the base (bottom) facing the instrument panel, and mounted low. Then I took a mirror, held it above the scanner, at eye level, and a 45* angel. Guess what? It looked great! Try it.

Maybe not? The most-recent gun-restriction law (re. anyone convicted
of domestic abuse can't have a firearm) is essentially an ex post facto
application of NEW law to OLD crime.

Remember the World War II saying about (very poor paraphrase coming):
"First they came for ... but I didn't have one so I didn't do anything...
Then they came for me, and there was no one left to help"

First the 2nd amendment, then the 1st.

John:

If you want the largest number of channels, and the larger size is not an issue, then go for the BC3000XLT. Otherwise, you might want to consider the BC230XLT...comes with two rechargeable batteries, so you can charge one, while you use the other! Or possibly wait for the new "Trunk Tracker" to his the shelves.

While the Austin Condor may not be designed for VHF-low band, it is far superior to the stock rubber antenna which came with by BC200XLT. Cordless phone signals (49 MHz) are heard using the Condor that would be completely missed with the shorter antenna. Of course that was when it was legal to listen in. I never do that anymore ;-) Does very well on the aero band also.

I've been pricing scanners today. The Pro-60 is $249 in California.The Pro-62 is being discontinued, and is on clearance for $199. Decisions, decisions. Is the extra range of the Pro-60 worth that $50? Hmmm.

Oddly, the Pro-51 (dual conversion) was more expensive than either of those. Does Radio Shack sell this one at a higher price than the triple conversion scanners.. because they slyly know it will pick up cell images? Or do they price it higher simply just because it can scan faster? Who knows... it's marketing "logic".

I also asked them to check all the stores in this sales district for other models. Their inventory said there was one remaining Pro-46 in Long Beach! But alas, it wasn't *physically* in the store, when I went there to examine the date code.

The Radio Shack just up the street from me is a clearance center, and they said they'd be getting a truckload of "rained-on" merchandise this week. I'm making myself wait a few more days before buying, to see if any hot deals show up.

I live about a quarter mile down the street from our local Mc Donald's. Before they built their new Play Place structure on th front of the restaurant complex, the 35.020 MHz signals came in here without any problem (sounded as clear as if being right there). However, the addition of the Play Place structure impeded the signal on that frequency. Happy Monitoring...Brian.

Hi Brian,

You may want to check on that McDonalds over the next
few weeks. Several of the McDonalds in the MD, DC and
Northern VA area have switched to 469.0125/464.0125 in
past month.

I've alos noticed that several have made the switch to
the new "3M" (sometimes marked as "GM") headsets which
operate in the ISM band (902-928 Mhz Wide FM mode).
The speaker frequencies for the "3M" headsets are in the
920-922 Mhz range and the headsets frequencies are in
the 903-905 Mhz range.

There are only a few McDonalds left in the area that still
use the VHF-low and VHF-high bands.

Bob

TV signals are horizontally polarized and many (most) other VHF/UHF services are vertically polarized (like the rubber duck). Rotate you antenna, so the elements run up and down, and it should work over the TV frequencies. The TV channels are on 54 - 88 MHz (Channel 2-6), 174 - 216 MHz (Channels 7-13), 512 - 806 MHz (Channels 14-62) so you should be able to use it at least in these areas. Between the band the performance probably drops off.

The TV antenna has an impedance of 75 Ohms instead of the scanners 50 Ohm input, but this is of little importance in a receive only setup.

TV antennas are mostly directional while scanner signals could come from anywhere, so consider your geography and/or a rotor. Good Luck.

On some of our police channels they use DVP every now and then.

My question is do the radios have to be switched on to DVP or are they on all the time. Can they do DVP and analogue?

Sometimes one unit is in DVP but the other in plain voice. Is this common? Do they know this?

Also, what does DVP do to the radio performance. More/less range? More power?

I could'nt agree with you more. I do media and invstigative legal work and I too have seen here in my city this -holy marrage of the Pigs and the Media in situations. I agree it must stop. They or we should be somewhat advesaries in order to get at the truth and report a real story. I personally will never listen to any law enforcement and report on it with out taking it with a GRAIN OF SALT. Its the responsibility of the journalists and the public to never take what the official line is on face value. WE ALL must question Everything all the time.

Yes! When I walked around near that local Mc Donald's, just recently, I couldn't find them either on 35.020 or 154.600 MHz. So, what you say may be quite true. I'll check them out with the Pro-2006 and my handheld (Pro-43). Can you put up any specific frequencies in the 900 MHz area where they might b working? Happy Monitoring...Brian.

Why do EDU forbid forsale? Maybe it's not the EDU site, but the admin,
the owner of the list, who knows. But I'm sure there's a reason. The
list may be free to the listowner with a rule that no money be
transacted over it (for sale/WTB).
It could be the list owner just doesn't want it.
It could be that a list that allows for sale would be flooded with FS
posts more than anything, resulting in a drop of subscribers.
But whatever the reason, I'm sure there IS a reason.
Would you like to stop complaining and set up a list that allows FS
posts? Perhaps if you set one up, you'd see how quickly subscribers
dropped. Yes, I'd love to have a LMR list that allows FS, but I'm sure
I'd tire of it after 30 posts a day of people who join to do nothing
more than use it as a way to advertise for their business for free.

A scanner must recieve part of the 800 band (800-860/870) to be
cellular capable. There isn't the components in there to even pick up
820, much less 870.. However, you may recieve images on 370 or so,
depending on the IF of the scanner..

>Please reply via email to cfeltham@myna.com

>Cliff Feltham
>Toronto, Ontario, Canada
>http://www.myna.com/~cfeltham

I own the same model that I bought in 1994. It does scan the 800 MHz band -there are segments that are skipped like for example -868.xxx will then jump to 894.xxx (try stepping it with the manual key -use the search mode so you can see what I am describing)

I have opened my scanner up -and I closed it back up. It takes a very steady hand and alot of concentration to perform the modifications for restoring full cellular coverage.

I Live in Amelia County, (VA)listen to Chesterfield (Virginia) Police, here in the U.S. ,on the 800 band sometimes. Basically, I listen to County Sheriff/Deputies and Virginia State Police that are not on 800 MHz and monitor businesses like Security Companies and Drive-thru windows.

It is possible for mod -depending on how much you want to spend :)

Sean, In Amelia County, Virginia

I have not received replies fro the top two bidders on this radio from last week, so I am offering again. Please do not offer to buy if you are not willing to complete this sale before Saturday. I am specifically selling the radio to raise money for a new HF rig at the Miami Hamfest and if sale is not complete before Saturday I am not going to sell.

For Sale: Radio Shack PRO-46 hand scanner in NEW condition, with all original packaging including original owners manual, AC adapter, desk stand and ni-cad batteries (ni-cads are getting weak). RADIO HAS ALREADY BEEN MODIFIED PROFESSIONALLY by Cellular Security Group in Essex, MA. Listening for best serious offer.

Buyer to send certified check or brand name money order. Please state if your offer includes shipping or not. You can issue a UPS or FedEx call tag to pick up the radio with delivery of the payment.

Thanks for reading through all this !

Yes. There is a key pad entry hack that is rumored to enable 66-88 MHz and cellular base (869-896 MHz) on earlier ones. The production date codes that this will work on is debatable. I know, for a fact, that it will work on a 12A3 (December 1993). Some say it will work up to 2A4 (February 1994), others say 7A4. I say "Who cares?". The Pro-51 will receive most of the 869-896 MHz as images anyway and quite well at that. There are probably many other mods, I read about a squelch tail mod somewhere.

3495. Re: SecureNet question

Newsgroup: rec.radio.scanner
Date: 1997-01-28 00:00:00 UTC
From: Leblanc <bulldogs@eatel.net>
Message-ID: <32EDBB10.3590@eatel.net>
Source record: 209815
Cross-posted to: rec.radio.scanner,alt.radio.scanner,aus.radio.scanner

Where I live we they also use the infamouse SecureNet. The way it works it that a "code" is loaded into the radios. Once the code is loaded, the radio will decode the encrypted transmissions automatically. If the user wants to transmit on Secure, they have to turn a knob, or select it from a keypad to encrypt the transmissions. That is why you will sometimes hear one side of a transmission fine while the other is on securenet. Another tidbit about securenet is that if the radio is without a power source for any amount of time the securenet code is usually lost and must be programmed into the radio. This reprogramming usually takes a little while using a device that is plugged into the radio. Where I live we have police, fire, ambulance services, town and county maintenance on 6 repeaters. Only the police force have securenet capability. I hope it will stay that way so I can at least listen to fire calls. The police will usually use secure to transmit information about drugs and/or juveniles.

Hope this helps.
J. Leblanc

Hi,

Sorry about my limited knowledge. I thought a spread spectrum phone uses
digital code division multiple access (CDMA). The continous voice
conversation was being first Pulse code converted then, depends on the
current instantaneous psuedo noise signal, each divided part digital
voice signal was modulated using shift keying method and so each part
have a different shift key frequency. The only way to decode the
information is when the receiving hand set to run the psuedo noise
sequence simultaneously.
So I am a bit unsure , and would most wish to know, how a analogue
scanner can intercept the conversion.
Information on this subject is most appreciated

Patrick

>My question is do the radios have to be switched on to DVP or are they on
>all the time.
Depends on how they are programmed. One can slave DVP/DES on a particular channel, or it can be toggled.
> Can they do DVP and analogue?
Yes.
>
>Sometimes one unit is in DVP but the other in plain voice. Is this common?
No, but it can happen.
>Do they know this?
Depends if it is intentional or not. Most radios will give an alert tone when they are transmitting in the clear, and some have the option when programmed to give the same alert tone when receiving a message in the clear.
>
>Also, what does DVP do to the radio performance. More/less range?
Less range is the rule. Usually about 60% with better performance with the XL hybird,
> More power?
No..

One interesting thing about this that know one has brought up. According to the Washington Post and Washington Times the couple that intercepted the call was in their car outside a mall where the Congressman was talking on his cell-phone.

So not only were they running mobile, but they just so happened to have a tape recorder handy too. Now if the guy was at home, I'm sure all of the scanner and ham geeks would verify that we have more than enough equipment to be able to record the call. But how many of us actually bother to bring a tape recorder with us when running mobile?

I'm not saying it was an intentional conspiracy, but it sure makes you go hmmmmm! :).

Matt,
The Pro-51 is about 2 or 3 years "older" than the Pro-26. Both units
are made by Uniden. Just like you have the Mercury Sable and Ford
Taurus(very similar, just different name tags), you have the Pro-51
and BC230XLT and you have the Pro-26 and the BC3000XLT.
The 51 is a dual conversion rig that covers the basic 13 frequency
bands. The 26 is the current top-of-the-line handheld that has nearly
continuous coverage from 25-1300MHz. The 26 also has several features
not found on the 51.
The 51's usual price is a joke at $300(compared to it's "sibling"
the BC230XLT which is priced in the low $200s). When it goes on sale
for $190 it's a good deal. If the 51 is not on sale, you can wait
for it to be or check into the BC230XLT.
The 26's price is $450 I believe and drops to $350 when on sale.
You can get it mail order at any time for this price delivered to
your door.
You'll have to decide if you want the extra-frequency coverage

and features of the 26 for about $130 or so. I personally think it is
well worth this price considering the time frame in which you will
hopefully be using it(spread the $130 over the life of the radio).
You'll have access to many more frequencies/agencies along with
some very nice features.
If you are serious about the Pro-26, you might also want to
check into the BC3000XLT. Same price and feature set is roughly the
same but definitely two different radios.
As for telling which models are the latest, you can only get
that by following the hobby as each model is introduced. As for
the Radio Shack's comment about the 26's ability to track conversa-
tions that skip frequencies...pretend you didn't hear it because
they obviously did not know what they were talking about.
Good luck in your decision!

Strong signals,
Rich Wells

There is no such thing as a "Weitz" scanner.

If you're talking about the Standard AX-400, which is sold outside Japan
as the WELZ WS-1000, then yes; I've had one in my pocket for
several months, and it's been on the road.

First, its receiving and audio performance is certainly fine; it runs forever
on 2 alkaline or lithium AA cells, and IMHO is the only micro sized rig
worth getting right now.

Due to the inability to use auto frequnecy step selection outside the
country of intended marketing, and other nasties like the inability to
easily lock out memory channels on the fly, you wouldn't want it as your
primary rig (certainly not when listening to trunked systems!). ALso 4
banks of 100 channels is a bit awkward.

For travel - grab it. But a better antenna for fringe reception too; the
micro duckie is very cute but useless below 400 MHz.

Well I'm not planning on judging the event per se. The police department may have felt it was in the right to beat and kill this guy. Hey, I wasn't there.

Actually, my website has to do with the pros of open access broadcasting by public safety agencies. This broadcast suggested to those who heard it on their police scanners that maybe the police department was a little out of control. The segment which will feature this recording will have to do with how open broadcasting enables public scrutiny of the police, and in extreme cases may even help lead to positive reform (as in New Orleans).

If someone can't send me this file, I'll have to send away for an entire video documentary on the case from a major TV network which includes the recording. I don't want to pay out that much for it, so if anyone can help, I just need the recording. -Someone- must have it.

Thanks.

AFAIK the firmware in the AR8000 has not changed since day one. There have
been improvements in the audio and RF circuits though.

Also AFAIK the previous ICOM offering, the R1, did not change (except for
firmware excluding the 800 band) since the day =it= was first offered for
sale in Japan (almost a year prior to its introduction in the US). So I
wouldn't hold up much hope of them "getting the bugs worked out". What you
see is what you get.

3508. Scantenna or Diaond Discone for my Pro 2035?????

Newsgroup: rec.radio.scanner
Date: 1997-01-28 00:00:00 UTC
From: Ryan McCarthy <MidNiteStorm@worldnet.att.net>
Message-ID: <5cl0cb$a7i@mtinsc05.worldnet.att.net>
Source record: 209828

Hello Everyone:

Iam looking into an outdoor scanner antenna for my Pro 2035 scanner.
Iam considering either the Scantenna or the Diamond Discone.
I like the sound of the Diamond Discone , becuase it is a very well made antenna & it holds up very well to the weather (high winds,snowtorms, rain etc.) those of here on Long Island. But I also like the sound of the Scantenna , but the fact that it is made of aluminum concerns me.
What would you reccomend?
Thank you all for the help.
Ryan

Is the Condor a mobile antenna or can it be used as a base station?

You should have had it for longer. I reckon you would have changed your
mind. It's a lovely looking unit and the RF side of it is indeed good
but the computer side of the unit is poor.

The AR8000 is way ahead of the R10 in many respects, not least of which
is scan speed and ability to link banks etc.

In the real world, the only advantage the R10 has over the 8k is size.
Apart from that, Icom have slipped up big time.

There have, so far, been only very few R10 reports in this newsgroup and
almost every one of them has mentioned the slow scan speed and some the
lack of various other features.

I believe that once enough people have R10s you will start seeing a lot
of disappointed users posting messages.

I suppose one could psychoanalyse it to death. It depends on the
person... in a sense, scanning is the ultimate sort of voyeurism. One
needent do anything other than punch a few buttons to tune into the latest
drama (emergency channels) or intrigue (Newt "Gee-is-my-face-red-but-I'll-
pass-a-tougher-law"-"Less Government" Gingrinch) that is beaming to and
through you.
In another sense it can be just plain informational (hmmm, the
neighborhood crack dealer finally got arrested, or perhaps the tornado is
coming my way after all). Ask anyone who watches CNN more often than the
news gets updated (web surfers are a better analogy... we tune out the
un-updated info).
Maybe it is the (predominately?) male version of the soap opera? :)
Just a thought...

I think you missed the point of the original question. If *you* are
using a 900Mhz SS hone and you are talking to *someone else* that is
using a 46/49 analog phone the call can be monitored by a scanner in the
vacinity of the person you are talking to.

The Radio Shack FRS-105 uses channels 1 - 7 only. I think it's
the same radio as the Motorola Sport 7x.

The Midland Model 75-510 is the only 14 Channel FRS radio that
I am aware of. It can be purchased through EEB for $149. The
unit has 14 Channels with a Scan function that allows you to
Scan all 14 FRS channels. It can also operate with 38 different
CTCSS Tone (PL Tones). This model also comes with 4 AA Nicads
and a 6 volt Charger/Adapter.

If anyone is considering purching a FRS radio, then I recommend
the Midland Model 75-510!

The other models of FRS the available are:

The Motorola Sport 7 lists for $119 at EEB
The Motorola Sport 7 lists for $99 at Southern C & E

This unit does not have an external channel knob. You must
flip some dip switches inside to change channels.

Batteries are not included

The Motorola Sport 7X lists for $139 at EEB
The Motorola Sport 7X lists for $129 at Southern C & E

This unit has an external channel knob to change channels.

Batteries are not included

The Radio Shack FRS-105 lists for $179 at Radio Shack

This is Motorola Sport 7X under the Radio Shack name!

Not sure why it costs $40 more a Radio Shack!

Matt Wrote

"On some of our police channels they use DVP every now and then.

My question is do the radios have to be switched on to DVP or are they on
all the time. Can they do DVP and analogue?

Sometimes one unit is in DVP but the other in plain voice. Is this common?
Do they know this?

Also, what does DVP do to the radio performance. More/less range? More
power?"

Matt,

Yes a DVP radio can be used for both analogue or DVP.

Hearing one radio in DVP and another in plain voice is NOT a common occurance. This occurs becasue DVP uses a
great deal more power than using the radio normally (which I think answers your next question). As the power is
drained, the radio automatically STOPS coding the voice into DIGITAL and the transmission stays analogue. As a
general rule the officer using the radio would not know unless they had set the unit for analogue only.

DVP works by coding the voice of the officer "on the fly" the unit is coded with a 14 digit number, only numbers
programmed with the same number can unscramble the other units signal. This is IMPOSSIBLE to crack, just in case
you were think ing of trying!!! :)

I have a Scout 40 that I use with an AOR2700. The scout is great when you in close proximity of what you want to listen to, but unless you have a high gain antenna you're not going to hear anything to far away besides FM Wide radio staions and paging signals.
The other anoying thing is that as the scout picks up frequency hits, it continually tunes your receiver if you like it or not. That means you might here something interesting and the next second it's gone. You can manually scroll back through the scouts recorded freqs., but that can be a hassle. Also, if there's a freq. close by you don't want to hear no matter what, you're out of luck. It'll just keep racking up hits on that same freq. Don't get me wrong, it'll still grab everything else, but it's still going to keep nailing away on that annoying country station or paging signal.

3531. Digital Police Radio

The other day I caught a bit of conversation between a unit on the road, dispatch and a second unit on the road, what was happening was that apparently unit 1 was xmiting in digital mode and dispatch was not and the second unit was trying to help out.

This town recently changed their communications system and moved their freqs and apparently added digital capibility.

My question is why wouldn't the be digital all the time, is there a drawback to being in digital full time?

Another town local to me operates their radios in a normal/analog mode and switches to digital when they want to be private, again the question is why don't they go digital full time?

3532. need advice on buying sony 900mhz phone

Newsgroup: rec.radio.scanner
Date: 1997-01-28 00:00:00 UTC

I'm seriously considering the purchase of one of Sony's
new 900mhz phones and would be greatful for guidance on a
few areas.

First of all, will I do as well buying the analog 900 mhz
model? I've seen basic models of sony's 900 analog going
for just around $110. Other than the supposed security
advantages of digital, are there other reasons for buying
them versus analog 900mhz?

Moving into the digital realm,
I've seen sony's d900 on sale for around $135, though that
is for a floor stock model. Does anyone know of a
retailer in LA, or a reliable mail order firm that could
sell me the unit at equivalent or better savings? I'm
sony id 910 which is also at my local superstore as a
floor model for around $180.

Also, is it true that the batteries on these things need
to be discharged fully before you can recharge them? If
so, does that mean they have to stay off the base until
they are almost out of juice?

Thanks for any guidance you might be able to offer.
Please reply directly to my e-mail address, ag644@lafn.org

Best...Vince

3533. Scanners on RealAudio

Newsgroup: rec.radio.scanner
Date: 1997-01-28 00:00:00 UTC
From: tpenn@netcom.ca
Message-ID: <32ee3d8d.7954882@nntp.netcruiser>
Source record: 209853

Hi,this is a great idea!
I've listened to the LAPD and Dallas PD
on RealAudio.
Anymore sites that have live scanner feeds?

Thanxx!!

BATTERY CONSUMPTION OF
THE
UNIDEN/BEARCAT 200XLT SCANNER

by Bob
Parnass, AJ9S

The Uniden/Bearcat 100XLT and 200XLT scanners are the

first portable scanners with enclosed, slide on battery

packs. Some 200XLT owners don't get the battery life
they expect.
They report having to recharge the slide on
NiCd (Nickel Cadmium) battery
pack after as few as only
3-1/2 hours of operation. Owners expect the
battery pack
to last longer, at least the 5 hours mentioned
in the
documentation supplied with the radio.

Much has been written
about NiCd battery characteristics
and charging in general. This
article will not rehash
general NiCd charging techniques. Rather, we
will
analyze the current consumption of the Uniden/Bearcat

200XLT scanner, and make recommendations specific to that
radio.

BP-200 Battery Pack

The BP-200 battery case contains six Sanyo 600 mAh NiCd cells soldered in series configuration and wrapped in heat shrunk plastic. This pack furnishes 7.2 VDC to the radio. A charging regulator circuit and a light emitting diode are also contained within the battery case.

In contrast to the Yaesu FT-23R 2 meter walkie-talkie, which is supplied with a wall-mounted charger, the 200XLT wall-mount unit is actually a 12 VDC power supply. Since the BP-200 regulator circuitry is contained within the battery case, 200XLT owners cannot easily opt for rapid or trickle chargers.

Measurements and Their Implications

The 200XLT's current drain was measured under several conditions, and a graph appears later in this paper. Tests show that the 200XLT consumes more current on higher bands than it does on lower bands. For instance,

listening on the 870 MHz band takes 13 mA more current compared with the vhf-lo band.

Measurements indicate that 200XLT current co nsumption is independent of scanning, searching, or manual modes, pro-

vided the scanning or searching is within the same band. This implies:

- 2 -

o If you must monitor 870 MHz frequencies for a pro- longed period, it is more "battery-wise" to scan a mixture of 870 MHz and low band channels.

Several factors can contribute to "shortened" battery
life. Shortened
recharge intervals will be needed if
using the radio with the volume
control at a loud set-
ting. In portable receivers, t
he audio amplifier stage
generally consumes more current than any other
stage.
The 200XLT has a more powerful, cleaner audio output
stage
than do other portable scanners.

The factory supplied earphone is
inconvenient and uncom-
fortable, but test results prove:

o
Using the earphone decreases current consumption.

Using an earphone saves
about 14 mA indoors, and about 50
mA in noisy situations where one might
have the volume
control set at maximum.

When using an earphone with the
test radio, the best
volume control setting was
at the 10 o'clock position,
versus 12 o'clock when using the internal
speaker.

Listening to "busy" channels generally consumes more

current than listening to infrequently used channels.
One surprising
exception, borne out by test results, is
that:

o When using a
n earphone (at 10 o'clock volume set-
ting), listening to busy
channels actually consumes
less current than when the 200XLT is fully
squel-
ched!

Improper battery charging can require the battery
be
charged more often than normal. If the battery indica
tor
on the 200XLT's panel flashes, charge the battery pack
for a full

16 hours. Test results showed:

o The low battery indicator flashes when
battery vol-
tage falls to 7.2 volts or less.

The 200 memory
channels in the 200XLT are backed up by a
capacitor kept ch
arged by the NiCd battery pack. Current
is required to retain the memory
information, even when
the radio is turned off.

How much battery drain
is due to maintaining the memory
information? To answer this
question, the author
measured the current required to backup
the memory in the

- 3 -

200XLT. A
Fluke 8024B digital multimeter indicated that:

o The 200XLT draws
about 0.50 mA with the power
switched off.

The six cell Sanyo
NiCd pack is rated for 600 mAh capa-
city. If the batt
eries were perfect, and had infinite
shelf life, the memory backup would
drain a fully charged
battery flat in 50 days:

600 mAh /
0.50 mA = 1200 hours
= 50 days

But no NiCd
battery is perfect -- all have a finite shelf
life. NiCd batte
ries will discharge by themselves,
through spontaneous chemical
decomposition, even when not
connected to a load. The General Electric
Company indi-
cates that the average NiCd will lose about 1% of its

capacity per day at 70 degrees F.

The author developed a discrete t
ime computer simulation
which shows that:

o The cumulative effects
of self discharge, combined
with 0.50 mA drain due to memory
backup, will
deplete a fully charged 200XLT battery pack in about

40 days.

A plot of the predicted daily decrease in ba
ttery capa-
city appears elsewhere in this article. The plot indi-

cates that:

o To get the most use between recharges, charge your

200XLT right before using it. If you charge your
200XLT battery,
but then leave it in a drawer for a
week, you wil
l have already lost 20% of the opera-
ting time before the next
recharge is required.

Average self discharge at 100 degrees is about double
(2%
per day) the discharge at 70 degrees, which is a good
reason to
avoid storing NiCd batteries in a warm automo-
bile. At 100
degrees, it only takes about 34 days to
deplete the 200XLT battery.

These Recommendations Can
Work For
You

By using his 200XLT right after charging its battery for
16 hours,
Mr. Ron Smithberg reported he is now getting
6-1/2 hours
use on a charge instead of the 3-1/2 hours he

- 4 -

got previously.

Computer
model based on these assumptions:

1. A new battery, fully charged to
600 milliampere-
hour capacity at start of day 1.

2.
Continuous drain of 0.50 mA to retain 200XLT
memory.

3. Ambient temperature 70 degrees
F.

copied from UUCP:
>From: David M. Bruce)
Newsgroups: rec.ham-radio
Subject:
Bearcat 200XLT Mod
Organization: The Internet

To modify the 200XLT for recieve
of cellular service:

1. Remove antenna and battery.
2. Remove two Phillips
screws from back, two more from
bottom (battery retaining
spring screws, and the spring
itself.
3. Pry rear cover off from bottom
and remove.
4. Revove two small screws from base of circuit board.
5. Pull
front panel from mainframe at base and separate.
6. Find IC labelled UNIDEN
UC-1447 and 10k ohm resistor
(brown-black-orange) above it.
7
Cut 10k resistor in two with small wire cutters. Or cut one of the leads.
8.
Reassemble, make sure dual-inline connector at bottom of
board lines up
correctly with socket. Gently tighten

bottom screws.
9. Replace battery
retaining spring (slotted side toward
notched hole), ins
ert screws and tighten them securely.
10. Replace battery and antenna.

This
should allow entering of cellular freqs. Given to me by
friend who said it
works, but no warranty from me.

(Proceed at your own risk. WA2ISE)

That's correct!

The system they are using is like small local Repeater.

The Input frequency to your local McDonalds would be 464.0125.

They also use various PL tones to talk to each other
internally. The local McDonalds near me also operates
on 469.0125/464.0125. They use a PL tone of 88.5 when they
talk to the Customer and PL tone of 123.0 if they want to
talk to each other internally.

Bob

3536. Column: Scanning and encryption: why both should be unrestricted.

Newsgroup: rec.radio.scanner
Date: 1997-01-28 00:00:00 UTC
From: falatic@materials.ecn.purdue.edu
Message-ID: <5clek9$g6r@mozo.cc.purdue.edu>
Source record: 209856

The question of the legality of scanning certain frequencies is now in the forefront. As we all heard, Newt Gingrich was overheard plotting strategy over his cell phone. Putting aside for a moment the fact that he is a public figure, and that the strategy planning itself was improper, one comes to the basic question: can we effectively regulate the interception of radio transmissions (specifically, those bands used for telephone, military, and other private or sensitive communications)? [Note: I don't know much about military frequencies, but I believe some of those are currently illegal to intercept as well.] Even barring that, should such interceptions remain illegal on the basis of principle (i.e., it's not nice to listen in on the Hendersons)?

Let's start with the question of basic legality. What is so special about telephone communication that one would consider it private under the law? In the case of land lines, one has an issue of physical property. All lines not actually inside one's residence are the property of "the phone company," and thus "tapping" a phone requires some form of tampering with someone else's property. As a common carrier, the telco itself cannot legally monitor telephone lines for the interception of calls without a court order. A pretty solid case on the basis of property rights, and privacy by mutual consent or charter.

What about that cable line coming into the house? Now the water gets a little more murky. Is recieving what comes off that cable line illegal? [I'll look at the specific case of one who has paid only for basic service, and tries recieving channels they aren't supposed to per that agreement.] In the case of intellectual property and "theft of service," yes, *assuming (as is usually the case) the signal was scrambled in the first place*. If one buys a decoder box, or modifies one, for use in decoding channels they aren't supposed to, they are stealing service.

Perhaps an analogy would help here. Say a company mails you a check for $25, which you may cash and spend however you choose (but it'd be nice if you bought what *they* offered). Kinda like "free" TV... you get the content, if you care to watch, and if you buy what they advertise, it completes the loop. In a sense someone pays for the content, in a roundabout way, but anyone can freeload. Now, say that check you got was *only* good toward purchases from the Zygzy Co. Kinda like that raw, scrambled signal off the coax: not much good unless you make some agreement with the provider... or you use an illegal decoder. It's the same as taking that check and "doctoring" it to cash it. Stealing has taken place, whether by conversion of a check or theft of cable service. Both of these were essentially "given" to you in terms of media, but in converting them to your own use the crime has been committed (also, breach of contract may apply).

Now, what about those scanners? Certainly, using one to aid in the commission of a crime should add to the charges (i.e., using a mobile scanner to flee law enforcement should add to the crime of flight of pursuit). But should mere posession and/or use of a scanner constitute a criminal act? I think not, in general. (For the moment, I speak only to reception of unencoded, over-the-air receptions.) Intercepting unencoded radio waves is akin to intercepting any other unencoded signal (visual, audio, etc) on public property or your own property. (Videotaping isn't allowed at the theatre, and some notable courtrooms have banned audio and video recording, for example.) If your neighbor (as has been argued elsewhere) chooses to stand naked in the window one morning at the same time you happen to look out while drinking your morning coffee (we'll assume the sight was unexpeccted), are you committing a crime? Strictly speaking, no... it might not be very *nice*, but if someone bares all in plain sight, and you happen to see it, it is their own error in judgement. (This is a particularly good analogy, since scanning is more or less a sort of voyeurism, much like prime time TV is anymore...)

So, what's the big deal? One word - privacy. I have tried my best to argue that the burden of liability is on the hardware side of these various issues in order to make one point: the telephone (and the Internet, to a lesser extent now) are the most insecure form of public-transport communications (carried over radio waves or on land lines). Everyone on Capitol Hill is now rallying around the issue of communications privacy, when truth be told, one cannot effectively regulate or legislate the interception of radio transmissions. Why don't we take a cue from the cable industry? While the encryption of video is still primitive for analog transmissions, voice communications are relatively easy to encrypt. Even now, cellular networks are going digital, though as I understand it the encryption is used only for the transponder codes and such, which are currently easily intercepted and used by criminals (the kind that co-opt other peoples' phone numbers in order to illegally reprogram phones). Why not use strong encryption on the whole transmission, thereby neutralizing the potential for interception, preserving the privacy we value so much, and keeping needless and unenforcable laws off the books? That again shifts the burden to the hardware... regulate "unscramblers" instead... ideally, use an encryption method that is virtually unbreakable. How we might handle situations where people actively work to decode the signals is another matter, but I think that is analagous to the "theft of service" argument I used for cable descrambling (one might use the more broad term "information theft"). The reception of thoroughly encrypted information is the reception of useless information.

The technology has been around for 10 years to reasonably encrypt audio data, yet air-to-air encryption is only available on a few models of cordless phones (and I doubt that it's very strong encryption). Why? Due to an interesting confluence of government reasoning (*both* parties are playing this game). The government thinks strong encryption is a Good Thing, as long as they can hold the keys (Clipper, Son of Clipper, etc.). Since no one seems to like giving the government such privileged access, legislation aimed at promoting better data encryption technology (computer, phone, etc.) is going nowhere fast. Currently, it is illegal to broadcast

strongly encrypted data over the airwaves without special authority (last I checked, anyhow, with "strong" meaning "essentially unbreakable"). There are some good reasons why one could argue for a "key escrow" encryption system like Clipper, but communication taps are not the only way to catch a criminal, and so making such communications "un-tappable" would just require a change in strategy for law enforcement efforts against criminals using such technology to hide their crimes (human rights issues (i.e., the Geneva conventions) make it "harder" to fight a war, and arms control treaties (i.e., banning land mines) make it more difficult to fight one, but if people and governments can adapt to *those* restrictions, they can certainly handle a little more freedom and personal security in the Information Age).

Since the government can't see the light of day on the issue of encryption, it turns instead to legislating the reception of insecure information. So much for "less government"! In the end, we as consumers pay the price in stolen information (credit card numbers, cell phone ID's, etc., and the resulting loss of use). Instead of securing the information, and catching the dedicated thieves who work hard to decode and use such information with malicious intent, we broadcast it to everyone in the neighborhood, and try to regulate what they may hear. A poor strategy, resulting in a wasted effort better spent on developing secure technology and sensible policy.

Marty

A recent article that I read suggests that the "memory effect" is no longer a problem with modern ni-cads. In fact, there was a warning not to discharge the batteries completely.

I realize that there are lots of strongly held opinions on this matter. I have about 10 AA nicads which I charge whenever they get low (use them in my handheld scanner) as indicated by the low battery alarm. I've had them for years and they seem to work just fine.

> Why would anyone want to listen to a fast food radio frequency?
>
> Psyop

Most Fast Food chains use their headsets for internal comms when a customer places a special order. This accomplished via different PL tones (CTCSS). You will often hear them make rude comments about the person placing the order. You can also have alot fun sometimes, by responding to any internal comms that may take place while you're still at the drive-up speaker. They'll think they pushed the wrong button, and will wonder what actually went out of the the speaker!

I remember an incident a few weeks ago, where I had full car load of people that could not make up their minds on what they wanted to order. This really pissed the clerks off and they started talking about how long it was taking us to order. At the point I responded to their internal comms. This made them think that their headset system was screwed up. We listened to the next two order after ours and found that they were no longer using the internal comm switch to communicate between the two windows!

Hello,

Im looking for a good list or site with frequiencies for Texas, particularly the city of kingsville and surrounding areas. Area's such as Corpus Christi, Alice, etc... or a county list would be great as well (Kleberg, Nuesis, etc...) Any help will be greatly apreciated.

3543. New user needs to learn about ....

I am fairly new to scanning and would like to know what some of the abbreviations mean. Is there a document somewhere that explains them and how one might go about listening to them.

Some of the abbreviations I have heard about are: PL tones
POCSAG
DTMF (I know this one)

I know there are others but cannot think of them right now.

Scott

I can't speak for any other radios except for our Securnet equipped
Sabers and Spectras.

Radios that have the appropriate "key" installed will recieve both
"green" (secure) and "red" (unsecure) traffic. Its automatic.

The operator must select secure or unsecure transmit by using a
switch/button. The radios are programmed to give the user a warning
tone each time they key the mic if they are in the "red" or "unsecure"
mode. Often - routine traffic is not transmitted secure simply because
the encryption makes voice sound so lousy. (This has been improved in
the digital systems like "Astro")

> Sometimes one unit is in DVP but the other in plain voice. Is this common?
> Do they know this?

Yes it is common. Sometimes one unit will have the encryption turned on
for his trasnmitter and the person he is talking to will be
unencrypted. The receivers handle the traffic automatically. Hopefully
the radios are set up to "remind" the user he is transmitting unsecure.
Our dispatcher consoles have an indicator that shows whether a recieved
signal was secure (coded) or not (on channels with Securenet).

> Also, what does DVP do to the radio performance. More/less range? More
> power?

Based on my experience (no numbers to back it up) the "range" is cut in
half. Sometimes more sometime less. We only use secure coms for
special localized operations so I dont have a lot of experience in
trying them for "long range" work.

Regards

3547. Only getting out of town CMED

Newsgroup: rec.radio.scanner
Date: 1997-01-28 00:00:00 UTC
From: John Doe <BRIBEN@worldnet.att.net>
Message-ID: <32EEAB62.415D@worldnet.att.net>
Source record: 209867

Howdy,

I've set up my scanner to pick up CMED and all of its associcated channels for communications between ambulances and hospitals. Trouble is, I only hear calls for Spingfield Mass (about 40 minutes north of me) instead of calls in my state (Connecticut). I can't even pickup ambulance calls from my own town when they talk to CMED.

Can anyone out there figure out what I'm doing wrong? Do the CMED frequencies vary from state to state? The only reference I have is a little book that came with my scanner.

Thanks,

Dan Light

It does not sound like ambulance chasing, per se. Ambulance chasers are usually interested in bodily injury cases. This guy is talking about property damage cases. Insurance companies often hire independent adjusters to adjust losses. My guess is that this guy might want exactly what he says: timely information about losses, either those insured by his current clients, or possibly to drum up new business. Adjusters do like to get to fires, etc., as quickly as possible, and are often there before the fire is out. If you want to check him out, maybe talk to the firemen and fire subcode officials near the guy's home base. If he is legitimate, they should know him.

Well...err...you might wanna rethink that. Those things put a lot of
stress on the bnc connection. Sooner than later you wind up with a short
and greatly reduced range.

Ever since this business with Gingrich and that couple in Fort White intercepting his cellular conversation and then making it public, it seems everyone is coming crawling out of the woodwork and doing keyword searches on the net for scanner pages. Evidently, I am not immune. My own scanner pages also seem to be attracting my own fair share of odd sorts in the web world.

Here's one in example that I got today, and I'd like some input on this...

Date: Tue, 28 Jan 1997 11:43:02 -0500
From: <removed>
To: afn09444@afn.org
Subject: Scanner Monitoring

My name is <name removed>. I am a Public Insurance Adjuster licensed in the state of Florida. I am looking for people who monitor scanners in your area. I need to have timely information about structure fires and other property damages. If you or someone you know would be interested in making some extra money, while enjoying their hobby, please E-mail me (<e-mail address removed>) or call <tel-no-removed>. This is a great opportunity for someone who is home bound.

I particularly like the ending quip there. "Home bound", eh? "HOME BOUND???" This is what the Gingrich thing has done for us all? We're all just "home bound" bums, with nothing better to do? I guess we should all just get a life. We're all jerks and a**holes. We're all just one step away from a life of crime anyway and, since we are, why not work for the rest of the criminals of the world, and make good money doing it. Right?

(Sorry. I got off on a soapbox there. SLAP me when I do that will yuh, guys?)

But anyway...back to the question at hand:

I tried a finger search and came back with a site-name in Deland, Fla., but the particular user remained unidentified by the search machine. I tried calling the state insurance commission to ID the person and to ask the legality of the operation this person was pushing, and, they promptly put me on permanent hold (it's near the end of the day now and I guess everyone wants to go home). When I hung up and tried calling back of course all lines were now "permanently busy." So, I never did get to ask them whether it was legal or not.

So now, I come to the net to ask you all...since the STate of FLorida is too much in a hurry to get home....

Isn't what's being asked in the above request called "ambulance chasing?" Isn't that illegal??? Somebody explain this to me. Is this NOT ambulance chasing? What is it that this nut is wanting? and is he looking to get people in trouble?

Where do these people come from?

>
Building a decoder from scratch isn't that difficult. A far easier approach would be to find an old Syntor X Securenet Systems 90 card at a hamfest and wire this on to your radio descriminator. You'd have to open up the IF bandwidth a little to get the audio response up to 6 KHz and would probably have to improve the group delay response of the IF filter. However, this would give you a perfectly workable Securenet decoder.

That's the easy part. What is difficult is gaining knowledge of the encryption key in use without having a guy on the inside of the operation. Securenet DES has 72,057,600,000,000,000 possible keys. Its going to take quite a lot of computer horsepower to quickly hit on the right key.

Hopefully (for us in the 2-way radio business) it will be quite some time before desktop computers are powerful enough to break single DES in anything close to real time. By that time, you can bet your last crypto chip that everyone will have long abandoned DES.

>My question is do the radios have to be switched on to DVP or are they on
>all the time. Can they do DVP and analogue?

$depends, on how the particular channel they happen to be on at the time
$is 'strapped'. It could be 'user selectable', meaning the operator
$manually chooses clear mode or coded mode. It could be strapped always
$clear or always coded. Depends on the agency SOP.

>Sometimes one unit is in DVP but the other in plain voice. Is this common?
>Do they know this?

$common ?, yes. Do they know it ? , yes. Unless 'clear mode alert' tones
$are disabled..

>Also, what does DVP do to the radio performance. More/less range? More
>power?

$range is reduced considerably in coded mode. Power in transmit is
$effectively unchanged. Newer ASTRO digital systems will contain
$embedded error correction. Intelligent repeaters will pick up and
$restore the original signal to the proper BER. Range is thus identical
$to analog, and choice of modulation method is irrelevant to coverage
$issues.

I'm seriously considering the purchase of one of Sony's
new 900mhz phones and would be greatful for guidance on a
few areas.

First of all, will I do as well buying the analog 900 mhz
model? I've seen basic models of sony's 900 analog going
for just around $110. Other than the supposed security
advantages of digital, are there other reasons for buying
them versus analog 900mhz?

Moving into the digital realm,
I've seen sony's d900 on sale for around $135, though that
is for a floor stock model. Does anyone know of a
retailer in LA, or a reliable mail order firm that could

Also, is it true that the batteries on these things need
to be discharged fully before you can recharge them? If
so, does that mean they have to stay off the base until
they are almost out of juice?

Thanks for any guidance you might be able to offer.

Now available! Take a look!

WinTone32 v1.5 - Real Time DTMF Decoder/Scanner Monitor for Windows 95/NT

Works with your windows sound card to detect DTMF tones, no other hardware
required! Here is a list of the (new) options:

* Tunable Detection Options - Everything from changing sensitivity to logging
tones to file - You control it all.

* Log tones to a file for later study.

* Decodes DTMF tones in real time by using your Windows compatible sound card and any audio source hooked up to the Microphone jack.

* Decodes DTMF tones from windows WAV files

* Optionally saves audio into a WAV file

* Scanner Monitoring - Allows you to record audio to a WAV file, but only
when the audio breaks the software "Squelch Point".

* DTMF Triggers - Assign events to certian DTMF tones, and when these tones
are detected, the events cause pre-defined actions (Launch an EXE, Start
recording to a WAV file, Etc)

* Tested out on fast 486 machines, but the faster the better!

Come try the latest version!

3558. question on battery recharging on modern cordless phones

Newsgroup: rec.radio.scanner
Date: 1997-01-28 00:00:00 UTC
From: ag644@lafn.org
Message-ID: <ag644-2801971449480001@192.168.18.30>
Source record: 209878
Cross-posted to: misc.consumers,rec.radio.scanner,alt.radio.scanner,misc.consumers.house

When shopping for a new cordless phone at my local superstore, I was told by the salesperson that the sony 900 mhz series I was looking at--as well as most other modern cordless phones--use nicad batteries that retain the memory life of each charge, so that it is advisable to wear the handset battery all the way down before replacing it on its recharging cradle, at which point it is neccessary to leave it alone for the full recharging time.

Is this true? If so, I'd imagine it'd be in my interest to buy a model with the second battery in the base, no? Anyone with more experience in this area that my possibly misinformed salesperson, please let me know what you think.

Please reply directly to my home e-mail address: ag644@lafn.org

Thanks!

Steve,

I don't know if this is possible but if it is you will find attached to
this message a text file of CIV description for IC-735.

anyone except the author)

Have you bought a new radio lately? If you have, you probably noticed that it came with an increasingly common feature -- a computer interface. Actually, radios with computer interfaces have been around since 1976, when the ICOM IC-211 and 245 appeared on the scene with a computer interface that allowed remote control of the radio's frequency. The IC-701, introduced in 1978, used the same interface. Since then ICOM has produced the IC-720/251/255/260/451 series and the IC-R71/751/271/471/1271 series, each with a different type of computer interface. Both Yaesu and Kenwood now have their own interfaces for their families of radios. The various interfaces are described in [1] - [5].

ICOM recently introduced a new type of computer interface, called the CI-V Communication Interface System. The CI-V interface first appeared on the IC-735, and is now also found on the IC-275, IC-375, IC-475, IC-575, IC-761 and IC-R7000. The functions performed by the radios via this new interface are generally the same as those possible via the interface for the R71/751/271/471/1271 series [4], plus a few enhancements.

A recent Ham Radio article [6] provides a very simple (one resistor) interface and an elaborate Basic program for controlling the IC-735 with a Commodore 64. That same interface can be used to control any of the ICOM CI-V radios using a C64. However, there are significant differences between radios, especially in the case of the R7000. The author has tested the IC-735, IC-275, IC-475, and IC-R7000. This article describes how to control any of the current ICOM CI-V radios. A short Basic program for the IBM PC is included to demonstrate use of the interface.

THIS ONE IS DIFFERENT

Ho hum, you say, yet another interface. Big deal; what we really need is some standardization. That's certainly true, but the latest ICOM interface is altogether different from all the rest.

Picture this: You can have up to 15 radios and up to 254 computers, all connected in parallel to the same two-wire bus. Any computer can control any radio. In fact, radios can control each other. You can even have more than one of the same type of radio on the bus. Commands are guaranteed to get through, even if different computers decide to send commands to different radios at exactly the same time.

How is it done? The new ICOM interface is a CSMA/CD bus. The letters stand for Carrier Sense Multiple Access with Collision Detection, and the technique has been used for computer networks (like the Ethernet(tm)) for years. Multiple access refers to the fact that there can be many devices (computers and radios, in this case) on a single bus. Carrier sense means that a device listens to see if the bus is busy before it sends a message, just like you listen to make sure a frequency is clear before you transmit. If the bus is clear, the device then sends its message. Collision detection means that the device listens to the bus while it is sending its message and compares

what it hears with what it put on the bus. If the two are the same, all is OK. If they are different, it is because another device tried to send a message at the same time.

If there was a conflict, or collision, the device deliberately sends a jamming message to ensure that the other device, which is also listening, senses the collision. Next each device waits for a short time, listens, and then tries to send the message again. The waiting times are randomized to minimize the chance of repeated collisions.

If a radio receives a valid command, it sends a positive reply message to the computer that sent the command, telling it that the command was received and executed. If a radio receives an illegal command, it sends a negative reply message to inform the sender that the radio could not successfully execute the command. Not all commands cause the radio to generate positive or negative replies. Some commands simply request information from the radio, and the radio replies with the requested information rather than a positive reply. Two special commands are provided that do not generate replies.

Not too many amateurs have more than one computer. However, most hams do have more than one radio, and ICOM's new interface bus is a simple way to control several different radios with a single computer, using only one interface connection to the computer. Other manufacturers' interfaces either require a separate connection to the computer for each radio, or don't permit control of more than one radio of the same type on a single bus.

PHYSICAL INTERFACE

Unlike the previous ICOM interface [4], the new ICOM CI-V system requires no additional hardware inside the radios themselves. The new system uses the standard RS-232C format, with both the RS-232C Transmit Data (TXD) and Receive Data (RXD) connected to the single ICOM interface bus signal line to allow both transmitting and receiving on the two-wire ICOM bus.

The interface runs at TTL (+5V and 0V) levels, so most computers will need a simple voltage level converter to convert from the TTL levels of the ICOM interface bus to the +12V and -12V levels used by standard RS-232C serial ports. ICOM doesn't currently make such a device, but does include the schematic for a level converter in some of the manuals. Yaesu makes a level converter (the FIF-232C) and so does Kenwood (the IF-232C).

A simple level converter that requires only a single +5V power supply can be built using a single MAX-232 chip (from Maxim Integrated Products, 510 N. Pastoria Ave., Sunnyvale, CA 94086).

The bus address and baud rate of the radios are selected by internal jumpers. The 735 has three bits of address, the R7000 has four bits, and the 275 and 475 have seven. Bus address 0 has a special meaning and should not be assigned to a radio. The 735, R7000, 275 and 475

come with their addresses set to 4, 8, 16 (hex 10) and 20 (hex 14), respectively. All the radios seem to come with their baud rate set to 1200 baud. Baud rate for all can be set at either 300, 1200, or 9600 baud. Data is sent using 8 data bits, no parity, and one stop bit.

COMMAND FORMAT

Commands (and replies) on the ICOM interface bus are sent in the form of packets. Yes, packets are everywhere these days. These packets aren't the same as the well-known AX-25 or TCP/IP packets used by ham packeteers, but there are some similarities.

Each packet is a series of 8-bit bytes. A diagram of a packet looks like:

FE FE destaddr srcaddr cmdcode [data1 data2 .... dataN] FD,

where

FE FE is the preamble,
destaddr is the bus address of the destination
device,
srcaddr is the bus address of the source
device,
cmdcode is the command code,
data1 .... dataN are the data bytes, and
FD is the end byte.

The first two bytes (both hex FE) are a PREAMBLE, which signals the start of a packet. The third byte is the DESTINATION ADDRESS, which tells which device the packet is intended for, and the fourth byte is the SOURCE ADDRESS, which tells which device the packet is being sent from. Next comes the COMMAND CODE, followed by zero or more DATA bytes. Finally, an END byte (hex FD) indicates the end of a packet.

Packets vary in length from six to seventeen bytes. An address can be any 8-bit value except FD (FD is unusable because FD is used for the end byte of a packet). Computers can be assigned any unique address except 0 and FD. Address 0 is a special "broadcast" address for Transceive Mode.

TABLE 1: COMMAND SUMMARY

COMMAND FUNCTION DATA BYTES BYTES
BYTE SENT RETURNED

0 Set Frequency frequency none
(TX Mode)

1 Set Mode (TX Mode) mode none

2 Read Frequency none IC 275/475, IC735:
Range lower [2D] upper

R7000:
upper [2D] lower

3 Read Frequency none frequency

4 Read Mode none mode

5 Set Frequency frequendy FA/FB

6 Set Mode mode FA/FB

7 Set VFO none/VFO FA/FB

8 Set Memory memory FA/FB

9 Write VFO to Mem. none FA/FB

A Write Mem.to VFO none FA/FB

B Clear Current Mem. none FA/FB

C Read Current Offset none offset

D Set Current Offset offset FA/FB

E Start/Stop Scanning start/stop FA/FB

Note: Commands 0 through A are documented in information available from ICOM. Commands B through E are not currently documented, but have been found to work on the IC275 and IC 475.

COMMANDS

Table 1 is a summary of the available commands. Not all commands are meaningful to all radios. For example, the R7000 has 99 memories but no VFO, and generates a negative reply to Commands 7 and A.

DATA BYTES

Frequency:

Frequency data is packed two digits per byte, beginning with a (10Hz, 1Hz) byte. The 275, 475 and 735 ignore the 1 Hz digit, and the R7000 ignores the 1 Hz and 10 Hz digits, but they must be sent nonetheless. Only as many bytes as necessary need be sent. For example, if the highest digit to be changed is the KHz digit, only two bytes of frequency data are needed.

IC-735: 4 bytes
9 (e.g., 14.12345 is sent as 50 34 12 14)

IC-275/475, IC-R7000: 5 bytes
(e.g., 148.76543 is sent as 30 54 76 48 01).

Mode:

Modes can be designated by either one or two bytes. The R7000 can operate on either sideband, but selection is made by a switch on the back panel. Since there is no command that definitively sets an R7000 to USB or LSB, ICOM has used a different code for SSB on the R7000.

IC735: R7000: IC275/475

00 - LSB 02 - AM 00 - LSB
01 - USB 05 - FM Wide 01 - USB
02 - AM 05 02 - FM Narrow 03 - CW
03 - CW 05 00 - SSB 03 02 - CW Narrow
04 - RTTY 05 - FM
05 - FM

VFO:

VFO data is a single byte, either 0 for VFO A or 1 for VFO B.

Memory:

Memory data is a single byte containing the memory number.

Start/Stop Scanning:

A single byte. A one starts scanning, a zero stops scanning.

REPLY MESSAGES

Reply messages consist of a packet with a preamble, destination and source addresses, a reply code, and an end byte. The reply code is either hexadecimal FA, a negative reply, or hexadecimal FB (cute, huh?) for a positive reply. Transcieve Mode commands do not cause the radio to generate a reply.

A negative reply is returned by the radio to the computer whenever a command is undecipherable or there is an error in the data inside the packet, such as out-of-bounds frequency data, missing bytes, an attempt to select a non-existent memory, an undefined command, etc.

A positive reply is returned by the radio to the computer after a legal command is received and executed. Inquiry commands which cause the radio to send data back to the computer do not return a positive reply, since the returned data itself serves as a positive reply.

JAMMING SEQUENCE

When a radio is sending a message and detects a collision, it will immediately stop sending. In order to prevent the (somewhat unlikely) case in which the collision merely corrupts the content of a message without destroying its format, ICOM has implemented a jamming sequence, which is:

FC FC FC FC FC.

After detecting a collision, the radio immediately sends the jamming sequence and then waits for a short randomized period of time before

it listens to the bus and tries to resend the message that was involved in the collision. The radio will repeat the process for up to five times, but will then give up trying.

TRANSCEIVE MODE (TX MODE)

This interface provides a new feature, called Transceive Mode (TX Mode). TX Mode allows two compatible radios to be connected so that whenever the frequency or mode is changed on one radio the other radio's frequency or mode will follow. No computer is needed. The bus connector on the back of one radio is simply connected to the bus connector on the back of the other.

Transceive Mode also allows a computer to monitor the current state of a radio without the need to issue any commands. This capability is useful for logging purposes.

TX Mode is enabled and disabled by a switch on the same internal switch block that controls the radio's address and baud rate. If a radio's TX Mode is enabled, then whenever the radio changes frequency or mode, the radio itself will send a command that will cause the other radio to change frequency or mode correspondingly. All radios examined thus far have come from the factory with TX Mode enabled.

If a radio's TX Mode is enabled, it will send a Command 0 (Set Frequency) packet whenever it changes frequency and a Command 1 (Set Mode) packet whenever it changes mode. The destination address in these packets is always 0, and the source address is the radio's own address.

Any radio with TX Mode enabled will respond to Commands 0 and 1 if the destination address is 0 or the radio's actual address.

A radio in TX Mode will not generate frequency and mode command packets while it is scanning, but will generate both when it is stopped from scanning.

When a radio receives a Command 0 packet, it DOES NOT reply with a positive or negative reply packet.

While primarily designed to implement TX Mode, Command 0 can be used by a computer in place of Command 5 if no reply is desired.

THE STRANGE CASE OF THE R7000

The behavior of the R7000 is a bit different than that of the 275 and 735, largely because it lacks the concept of VFO A and VFO B as implemented in the other radios. The following describes the known peculiarities of the R7000.

An R7000 is capable of receiving signals at frequencies up to 1999.9999 MHz (except for 1000 to 1025 MHz). Above 1 GHz, ICOM only publishes and guarantees specifications within the 1240 to 1300 MHz band. Frequencies above 1 GHz are selected by a "1 GHz" switch on the

radio's front panel, which inserts a 1 GHz converter in the radio's signal path. The converter cannot be selected or deselected via the computer interface, nor can the state of the "1 GHz" switch be sensed through the interface. If the "1 GHz" front panel switch is depressed, all frequencies will be raised by 1 GHz.

The R7000 always replies to Commands 7 (Set VFO) and A (Write Memory to VFO) with a negative reply message. In the R7000, Command 8 (Set Memory) causes the contents of the selected memory to be transferred to the dial, causing the R7000 to jump to the frequency and mode stored in the specified memory. This is equivalent to selecting a memory and writing it into the current VFO on the 275, 475 or 735. Command 9 (Write VFO to Memory) causes the R7000 to write the current frequency and mode as shown on the display into the selected memory.

When it is in TX Mode, the R7000 sends only a mode packet when its mode is changed via the front panel, while the 275, 475 and 735 send both frequency and mode packets when their mode is changed, even though the frequency may not have changed.

SAMPLE BASIC PROGRAM

The sample Basic program runs under IBM BASIC or BASICA on the IBM PC, and allows the user to set the frequency and mode of an R7000 from the computer. It has not been tested on any other computer or any other version of Basic, but translating it to your computer's version of Basic should not be too difficult.

The program reads back and prints back both the command that was sent and the radio's reply. However, the program doesn't compare the command it sent out with what it heard on the bus, which would be necessary if there were more than two devices on the bus.

IMPROVEMENTS OVER PREVIOUS COMMAND SETS

The new command set has some improvements over the command set for the R71/751/271/471/1271 series. You can now:

o Stop the radio from scanning (by issuing a Set Frequency command) and take control of the radio,

If a radio receives a Set Frequency command while scanning, it will stop scanning and change to the specified frequency. If it receives any other command (legal or illegal) it will hold the command until scanning is stopped manually and will then process the command.

o Select which VFO to use, if the radio has more than one (this feature was possible on ICOM's second type of interface but missing from the third), and

o Monitor the radio's frequency and mode without issuing commands to the radio (using TX Mode).

o Clear memories.

o Set and read the radio's duplex offset.

o Start and stop scanning (on the 275 and 475).

However, the command set still lacks a number of features, as pointed out in [4], such as setting or reading the RIT. With the previous ICOM interface, NG6Q was able to go a bit beyond the normal command set and achieve a few additional functions by accessing "memories" 33 to 255 (the radios have only 32 memories). The processors in the 275, 475, 735 and R7000 enforce memory and frequency limits more rigorously, and the author has thus far been unable to "fudge" the memory and frequency boundaries.

SUMMARY

The new ICOM CI-V interface makes it easy to control one radio with one computer, and at the same time makes it possible to control more than one radio with more than one computer. The additional hardware needed to connect the radio to the interface bus is simple and easy to build. Command set functionality is improved over the previous interface. Amateur radio operators, one of the most ingenious groups around, should be able to think of many unique and interesting applications using the new interface.

What the heck kinda accessories did they stick you with to charge $800?
An the going rate for a 2006, modded or not, seems to be in the
$300-$400 range, tops....

Good luck!

I've got to disagree about ASTRO range being equal to analog. In an area
where analog is choppy, but understandable, ASTRO is so full of squawks,
and voice stretches, you CANNOT understand a word being said. Then
there's the issue of certain voices, and accents not being ASTRO
compatible.

I don't know, but you can search the net, i know there must be a site
on internet whereyou can find the connecting pin's plan. I do have
one from the AOR-8000. That was only for the interface.

BP> Without sounding like a total neophyte, does anyone know how to
BP> provide squelch detect for a computer interface on the 2700. I use

Aor-uk has an Email-adress, i thought it was - info@aor.co.uk - .
They do have PC-manager, a program for -8000 and -2700. It is used
in Windows and after ten minute's you get a message to restart. (it is
a try-version). It's a program when the scanner stops you will see
the freq, where it stopped. I guess i did not explain it right, but
my english is not that good. At least you can try it out.

BP> Is anyone using computer software with an AR2700 that has luck with
BP> squelch detection? How are you effectivly useing computer controlled
BP> software with the AR2700 -

I use an AOR-8000 and several software from several people, it is a
problem to scan with some programs, because if there's something to hear
the scanner is going over. I think that's the problem you have. (also mine)
At this moment i just got the PC-manager software and i am trying it out.

BP> Dennis Wish

I hope it helpes a bit...

It's not the food orders that most people want to listen to. The employees have a switch on their headsets that allow them to communicate with each other internally. You would be suprised at what you can hear!

If you get a chance, you should check out the August and November issues of Monitoring Times. They contain articles on Fast Food monitoring.

The article in the August issue of MT can be viewed online at:

A question for Bill Cheek. I have a PRO-2006 and all three mod. books. I want to do several of the mods. including the S-meter (both types - analog + digital), center tuning indicator, ATRS, extended delay, cell, and scan speed, ect. I would prefer to do all of these mods. in a large seperate project box (to try to keep the PRO-2006 as "virgin like" as possible) that would sit on top of or under the scanner, and connect it to the scanner via something like a 36 conductor ribbon cable or a multi conductor cable with DB25 connectors at each end for easy detachment. My question is can I do this ?, or do any of the mods. require the wire leads to the components and or boards to be shorter than this would entail ? Please let me know what you think.
Thank You.

I think you're right. I could be wrong, but isn't that what the
communications act of 1934 (as amended '84 '94 '96, etc) all about?
Listen all you want, but don't talk about what you hear. The media
ignores this, but I look at that (and the law probably does also)
differently. They're not really making anything off of listening, and
reporting, but this guy is trying to.

John,

Radio shack sells a 4AA batter discharger/charger for ?$16.00. This is assuming you are using it for 4AA NiCads. It discharges for an hour and then quick charges for 3 hours. It doesn't seem to be voltage or current dependent rather it seems to be timed.

I am counting on the RS shack engineers to have figured out typical charge discharge rates and their corresponding times for ideal battery cycling.

I use el cheapo batteries and so with charging system. It does the job.

Jon

Hello Dennis

I do a low cost interface for both the AR8000 and the AR2700 and I
ship to the States via airmail. It is available as a homebrew kit or
ready built & tested.

As you have discovered, there is a slight difference in the pinouts
between the two.

My interface is made for the appropriate radio. I have emailed you
info direct

Well, it of course depends on your locale-if you live in the country, I
can
hardly see where you (hold on a sec-I have to start my tape
recorder...OK)
would become addicted. However, in the good ol' days I lived in an
apartment
complex, and I found (darn those cellphone calls jumping all over the
spectrum....)
that you could usually tune in on any number of interesting
conversations. In a
residential neighborhood things are not nearly as active. Of course, you
will still
get the occasional inane teenager calls, which cause you to sometimes
lockout a
channel for hours. Well, gotta go call my local Democratic
representitive with
some info.....:}

I have heard that the Scantenna is one kick-ass antenna...the best there is. But I have heard from some that it can be a bit on the fragile side withstanding winter weather ice storms and the like. On the other hand some have told me that they're holds up okay in winter so I guess it depends on where you live. I have a Diamond and there are some Scantennas nearby and all our antennas seem to do okay in our winter ice.

So what does this all mean? Maybe not much but I prefer the sturdier antenna (to me).

Range is typically reduced in digital/encrypted modes. Also, voices can
be harder to understand when encrypted. Also, maybe not everyone has
capable radios.

Why is it that on some cell-phone frequencies I only hear one person talking and cannot hear the second person. I also noticed that it's usually the person using the cell-phone that I couldn't hear, but I could hear the other person fine. What's up...I've got a pro-43.

--

Poria Asaad -- pasaad@cisco.com
disclaimer it is wrong to use your scanner to listen to cell-phone conversations, except if you have nothing better to do.

3582. Reaction tuning TWO scanners or scanner with RS-232 output/input?

Newsgroup: rec.radio.scanner
Date: 1997-01-28 00:00:00 UTC
From: techno@actcom.co.il.NOSPAM
Message-ID: <E4qIvB.99t@nonexistent.com>
Source record: 209902
Cross-posted to: alt.radio.scanner,rec.radio.scanner,alt.radio.scanner.uk

Hello all,

Has anybody on this newsgroup found a way to reaction-tune TWO scanners (i.e the first scanner locks on a frequency. It automatically loads the other scanner with the same (or some function of) frequency)? It's operation should be similar to the reaction tuning available with the OPTO SCOUT?

Another option would be a scanner with simple input/output interface (RS-232, CI-V or similar would be fine), thus enabling connection of two scanners and acheiving reaction tuning. CI-V guru's, anywhere?

I was also thinking about hacking a pair of scanners, but while feeding keyboard input might be relatively easy, reading the display is A LOT harder...

Any help will be appreceated.

When responding, please email directly in addition to posting here, since our news server isn't very up to date. Please note that you must edit the reply email address (remove the .NOSPAM postfix). This has been done in an attempt to reduce the amount of junk mail received here from automatic mailers. Thank you.

regards,
techno

Hey, don't knock it until you've tried it!

The employees have their own private channel that they can
use to talk to each other in between orders. The big
thing for me, is to listen for the off color remarks that the
staff at the drive thru make. The real fun comes when you
freak out one of the clerks by commenting on something they
say about the previous customer. They starting worrying that
they might have said something that went out over the intercom
to the customer. This has a very chilling effect on the clerks!

I also enjoy tracking down new Fast Food frequencies, because
they're not generally listed in any Scanner guides.

My 1994 copy of Frequency Almanac does not show any freqs in the 800mhz range for the county. Have they gone "trunked"? However my 1995 police call shows Angleton sheriff in the county of Brazoria is 806.1625. Have you tried http://wolf.sulross.edu/~dper644/txscan.html for Texas Frequencies?

You're going to sell a perfectly good radio just because you can't find
any mods for it? I've had my SC150 for a little over a month, and I
love it. Great radio for the price. If you're interested in the
cellular thing, the SC150 will pick up images in the 895-916 range. My
only gripes are that it only has 100 channels and a non-programmable
search.

Does anyone know if SecureNet itself is digital like Astro? I guess if they use DES encryption, then SecureNet is probably digital, but maybe with not as much resolution as Astro.

Carl,
I would make sure you get a chance to "test drive" both
units(8500 and 890). I have heard more bad than good about each of these
radios. When I bought my 8500, it wouldn't
work right out of the box...period. I sent it in for service and got it
back about two weeks later. It was terrible for intermod, lots of images
and birdies everywhere.
The 9000 I have is very nice and does a wonderful job.
However, I did have to send it back to Uniden right out
of the box because it was receiving about 10Khz off frequency
in the 850-860 range.

bud.jamison@thekat.maximumaccess.com (Bud Jamison) writes:
>MFF> plotting strategy over his cell phone. Putting aside for a moment the
>MFF> fact that he is a public figure, and that the strategy planning itself
>MFF> was improper,
>A) newt wasn't on a cellphone, one of his aides was, and
>B) he was NOT 'planning strategy', he was having a discussion with his aides
>and attorney, and there was NOTHING improper about it.

An excerpt from the CNN web site, 1/13/1997:
"The conversation, held by Gingrich and other Republicans on Dec. 21, took
place the same day the speaker admitted to ethical errors and promised not to
organize a defensive strategy with other GOP leaders. Democrats point to the
tape as evidence that Gingrich violated his promise. Republicans say it proves
Gingrich was not involved in plotting strategy."

I should have said something like "one of Newt's conversations,
which was broadcast over the air via the cellular phone used by one of
the parties" or somesuch. As for the content of the conversation, it does
seem the interpretation depends on who you talk to, although it is likely
inadmissible in any proceedings that might have to do with it. While I
might reveal some bias against Newt, I'm trying to point out that the same
people who cry "less government" are the ones who, when bitten by the
concept, try and bite back with tougher restrictions. Clinton is no less
immune it seems, with Clipper and all, but the Gingrich recording flap
seems to point up the the irony of such claims, and has brought the issue
to the forefront.

> I don't think this analogy is a good example. The key question is
> whether the transmission media is a public resource or not. On a

Perhaps I tried to raise too many arguments in this post. I was
trying to counter the "if a signal goes to my house it is mine to do with
as I please" argument, lest it seem I'm advocating signal piracy or
somesuch (I'm not).

> > Now, what about those scanners? Certainly, using one to aid in the

> spreading code with spread spectrum? Is that encrypted?

By encrypted I mean that one would have to have a user-definable
encryption code in force at both ends of the transmission (I'm limiting the
scope to broadcast signals, not land lines). As I understand it (perhaps I
am wrong?) one is prohibited from broadcasting encrypted data. I know what
you mean by encoded. What I'm advocating is the legality of using true
data encryption over the airwaves, encryption that is very hard to break
even with all the identical equipment sans the code used. If it was legal
I'd think that even primitive 46/49 phones would have incorperated *some*
sort of encryption (bordering on just a unique encoding, but good enough to
allow the user to select, say, a 16 bit key for handset and base).

> Marty, your argument seems to assume that there is "encrypted" and
> "not encrypted" when it comes to communication. Encryption is a
> matter of degree, not absolutes. Asking a government to regulate
> encryption is like asking it to regulate free speech. You really
> don't want them to do that.

I disagree, insofar as I've tried to clarify what I think is
"encryption". True, I could encode speech, but any identical reciever
could decode it. When one starts using unique, non-trivial keys to encode
the data, that's where I think it becomes "encryption", in the sense it
would not be a simple task to decode the signal or co-opt the base unit.
As for gov. regulation of encryption, I am firmly against it
(thought there are compelling arguments for it, it is nonetheless an
abridgement of our rights).

> I agree that anything broadcast on the electromagnetic spectrum ought

> Obviously, if someone is ignorant, stupid, or otherwise
>...
> spade and not pretend there's no such thing as Social Darwinism.

It makes sense right up to the catch-all point about Social
Darwinism. While it is in many ways an unfortunate facet of our society,
to allow it to be the norm is akin to allowing capitalism (or any other
socio-political system) free reign: freedom as we know it would not exist.
Sometimes one wonders if the government is all that worrisome compared to
what goes on in the business world... but these are topics for another time.
Thanks for the feedback, and I look forward to your reply.

>>Where do these people come from?
>>
> How can this be illegal? Adjusters need help in finding where
fire are so they can offer their services. Newspapers don't
publish all fires which adjusters go for. Therefore they go out
and get help....

who does this? People who listen to scanners who do still photo
breaking news or video breaking news. I do both. I also listen
for an adjuster and a board up company. Perfectly legal.

What goes out on the airwaves is public property and usable as
a source of income. If I can use the scanners to get me to a new
scene where I make money off of, then I can also pass those
locations along to any other agency who wants to utilize that info for
their betterment.

People offer services listening to the scanners to people needing these services so they can make a living.

Why are people calling the insurance commission and stuff to eventually get this guy reported and then booked and then jailed until some local oaf can find out if he is breaking some obscure law that needs to be voted upon next session ...

Live and let live.

People who listen and report what they listen are hurting no one. This comes under the heading of victimless crime...which itself is obscene. don't push the river...it flows by itself.

bill

3624. Comparing Pro 2035 and 2042

Newsgroup: rec.radio.scanner
Date: 1997-01-29 00:00:00 UTC
From: jeffmulter@aol.com
Message-ID: <19970129224100.RAA00679@ladder01.news.aol.com>
Source record: 209593

Someone was looking for the differences between the 2035 and the 2042 a couple of weeks ago. I ran across a comparison in the January, 1996 issue of Monitoring Times:

Improvements of the 2042 over the 2035 -
... faster tuning speed with rotary tuning knob
... empty memory channels are automatically skipped, rather than having to lock them out individually
... up to 200 channels can be locked out in the scan and search functions
... the automatic search and store function doesn't memorize duplicates
... receiver alerts user when user attempts to enter duplicate frequencies
... frequency banks can be sorted in ascending or descending order
... the display is amber, rather than green (easier to read)

Again, this information is from the January, 1996 issue of Monitoring Times.

aloha greg....when you land on da kine, u get to a phone book brah
and look em up what u need..plenty stores to choose from dis antenna
u want....

u stay Honolulu no...if so, then plenty stores. Not in Waikiki.
U have to get out of Waikiki to find the stores. some up by the
Ala Moana Shopping Centah and others downtown side.

why not call the tv stations and ask to speak to the assignment desk
and ask them where to buy what u look for....or the honolulu
newspapers....Advertiser and Star-bulletin.

U like look dis site: http://www.starbulletin.com

also try: http://www.aloha.net
.aloha.com
.lava.com
.lava.net
.hawaiian-index.com
.aloha.com/~optunehi
.yahoo.com/Recreation/Sports/Surfing
.lava.net/~pueo/pidgin.html so u learn da kine
.aloha.com:80/~lifeguards/sitemap.html

.olelo.hawaii.edu/op/information/pronunciation.html
.aloha.com/~curran
http://www.aloha.net/~prophet/weblopedia
http://www.soc.hawaii.edu/con/media-lab/text/about.ml.html

then there is gopher site: gopher.hawaii.edu

Dis list get you all sorts of things about da kine...u learn
wiki wiki speak pidgin and local slang adn some great Hawaiian
languages....u be prepared brah....just don't call locals

hope this helps. I have relatives in Australia...

bill conduit
etc.

the Scanner Beam antenna is ok...not great, but ok.
if you are in a flat area, it's great.

He said that he had no *****ENGLISH***** instructions.

Since the Yupiteru scanners are manufactured and primarily marketed in
Japan, he probably has a domestic model shipped with a Japanese manual.

Yes, I heard about that rather quickly, my group paged the incident to our members. From the pages I recieved it appeared to be a great pursuit. One thing you may want to do, is check your frequency's for Tempe Police. They are on a trunked radio system, the frequecny you listed is one of the 10 that they use. If you need the others i would be happy to email them to you.

Source record: 209604

Joseph,

I wanna thank you for your confidence in me! For everyone else I want to apologize for not posting more details. Unfortunilly my isp is going ape on me!!! As you can see by the double post ther have been lot's of proublems over here at msn! So folks, now that I (hopefully, after an hour online with tech support) have this bug fixed, can tell you all more about what I have. I'm gonna list all the stuff, including radio at thier retail price, and then you tell me if it's worth $600!

RS 2006 399.99
RS Freq counter 99.99
RS DSP 99.99
Quasar mini recorder 69.99
2 Cheek mod books 20.00
2 RG-8 50' cables 69.98
DSP power supply 12.99
external speaker 14.99
Extra antena for freq counter 9.99
Misc Connectors 20.00
Tech manuel for 2006 15.00
Anntena discharge unit 18.00

Total retail value 850.91

Now gentilmen and ladies, I KNOW that since this stuff is concidered "pre-owned" or "used", that it is NOT worth it's total value! But what I am offering here is for someone to get one of the last scanners around that could pick up FULL 800mhz. One that I cannot afford to ad the OS456, because of my computers limitations. To be honest I may have even forgot to list a few things that I was going to toss in with this stuff.

And for someone who might have a White's Spectrum XLT metal detector, that they don't wanna keep, I would be willing to do an even trade! That's what the $600 is going for! The XLT is running around $550-$575 used in good condition. I would concider my scanner in excellent condition, because it's been sitting here doing nothing for the last year. I've just been to busy to even program the thing!

Well, there you have it folks! That's what I got! If you're interested, please drop me an E-mail at Jay_Van@msn.com

p.s. If you live in Northeastern Illinois, let me know
I have a two anntena's that I can toss in with all that as well.
Together they add another $60 to the total value, but I don't wanna
get involved with shipping a 13 foot long UHF anntena!

To address you subject line: there isn't one. This seems to happen in the valley every few months, and Phx also seems to be the only metro area where this issue is discussed on this group. (Do other metro areas have better interagency communication?) Even in my hometown of Las Cruces, NM, when ever there is a problem, all agencies switch to the frequency of the primary agency to offer assistance (they are all operating on VHF-HI, so no band compatability problems).

Only in Phoenix......

The way I see it, if someone wants an insurance adjuster to come to thier rescue, they don't need "help" to know they are there. All they have to do is pick up a phone book and dial.

No, as I see it, it's ambulance chasing. The only difference is, you're not a lawyer -- you're an insurance adjuster doing the same thing.

But then, some people think it's thier god-given right to send me junk e-mail, too, by sneaking my name from a public list not intended for business purposes. Hey, I woulduh eventually got around to asking for thier services sometime anyway, right? So, I guess, why not go ahead and send me

the junk mail to remind me that they are there. Right?

I suppose you see ambulance chasing that way, too?

If we want your services, we'll ask; we'll call. Meantime, we're a little stressed out right about the time our houses are burning down when you arrive, eh?

And if one of my family members died in that fire, and you get punched by me...I don't want to hear it.

>

>The Xplorer does not compare to a scanner because it is not a scanner.
It is a near field FM receiver meaning that sweeps (not scans) 25 MHz
to 2 GHz in one second, and captures the strongest signal it 'hears'.
Any scanner that has that coverage would take hours to go through the
range.
The concept is to trade distance for speed.
As to "capturing all kinds of junk" yes, it captures the strongest
signal no matter what that signal happens to be; "junk" or otherwise.

The user has a great deal of control over this by staying on top of
the squelch control, locking out unwanted frequencies (up to 1000) and
using different antennas and filters.

As to distance, if the strongest signal is a taxicab several blocks
away, that's what it will intercept; the range for this type of radio
is considerable.
If the transmitter is a 'bug' at 300 MHz, it will pick it up 50 feet
away or farther, if it is the strongest signal present. I personally
did this.
I have heard commercial two way radios a quarter mile away and
cordless from across the street.

Once you get past the misconception that the Xplorer is a scanner and
realize what it really is, you will see that this is an excellent
product that does even more than it is advertised to do.

I will be posting an exhaustive review of the Xplorer on my web site
in a few weeks.

> in descambler, 32 megs of ram onboard, etc.

Sure it's possible (and you don't even need a CTCSS board, descrambler,
etc., etc.) - if it's an analog phone.

>So it is possible. How did I know it was a 900 mhz phone? It was mine.

Then you must have an analog phone.

Radio Shack sells one that discharges for an hour and then quick charges
for three hours.

It is time dependent not voltage or current sensed. I am counting on
the RS engineers to have figured out the discharge and charge times
given the type of battery and load applied.

K. Lawson (Ultima) wrote:
>
> Hi
>
> I was wondering if anyone could explain why I only
> get 1/2 of the conversation on cell phones. When
> I lock into my cell phone I can

To succinctly state it:

A) there is a very good 'return loss' on the 'pair'
going to the landline phone. That is to say, the audio
signal from the mobile phone user is not echoed' back
from the landline phone (usually employing a 600 Ohm
'twisted pair') to the MTSO (Mobile Tele Switching
Office) and then to be sent back out the BS (base
station) tranmitter (on the 'downlink' side of things).

B) The cellular carrier is employing "Echo Cancellers"
on analog calls (it is normally done only on digital for
reasons I don't have time to go into).

or C) The call involved all digital facilities throughout
the call route, i.e., no analog POTS -Plain Old Tele
Service (600 Ohm twisted pair) line involved. Such a call
'terminating' in a digital PBX system at a company
(versus that POTS line normally seen in residential
areas) _usually_ have no echo. Poor isolation in the
PBX phone handset _can_ gen some echo.

Sidetone IS NOT provided through the Telco loop (let's
put this to rest early). It is provided locally in the
phone so there is no need to transmit the mobile phone
side of things back out the BS transmitter.

The 'muffled' quality heard is due to a weird 'return loss' or
different 'reflectivity' to different frequencies (across
the spectrum) on a POTS line. Digital 'transmission'
beginning at 64 KiloBitsperSecond (known as a 'DS0' in
the telco industry) eleiminates this. This why home
modems 'train' or work out equalization on the line while
establishing a connection. POTS lines (not even considering
the phone) can vary in impedance all over the place and
rarely exhibit a "600j0' impedance characteristic.

Hope this explains it.

I should post an update - I've found that moving the unit upstairs enables
it to receive some frequencies. Still not as many as the RS-51 did while
imaging though! So I guess the problem is that the unit is simply not as
sensitive as an older dual-conversion scanner which maps similar freqs
into images.

Could be that the digital is only on a limited number of frequencies,
so when they go to "talk-around" or "local" they're off repeater and
back to analog.

>ambulance calls from my own town when they talk to CMED.

I'm not sure what you mean by "associated frequencies", but CMED is a
sort of universal frequency, usually kept in place to allow for
communications regardless of jurisdiction in the event of a large-area
disaster. There are equivelent Fire and Law Enforcement frequencies.

Some areas use CMED, among other channels for their every-day traffic
(often in-coming hospital reports), some do not. In many areas CMED
is not on a repeater, so range is very limited.

In my area, even with my discone 35 feet up on a PRO 2006, I'm
hard-pressed to get clear reception when the transmitting ambulance is
more than about 7 miles away and switched to CMED, which is not
repeated here.

Mark

The truth as I perceive it to be.

I'll second that--I had to resolder the connection between the bnc connector and the board on my Uniden BC80xlt. Of course, I had to do the same thing with my old Radio Scrap scanner which I used only with the ducky.

Unfortunately Uniden did not do a good job on the BC80XLT. The BNC connector is cheap and was not properly soldered to the board.

3670. Emergency Communications

Newsgroup: rec.radio.scanner
Date: 1997-01-29 00:00:00 UTC
From: CampGuy <campguy@zelacom.com>
Message-ID: <32EFEB7E.7F4D@zelacom.com>
Source record: 209639

Fellow Listeners,

It is my intention to create a reference product for emergency communications that will encompass the entire network of emergency service providers throughout the country. These reference volumes will be created primarily for the use of control centers and service providers to provide an accurate listing of resources available in neighboring communities, in the event of a major incident such as earthquake, hurricane, or other mass-casualty incident (such as a nuclear reactor explosion).
I realize this task will be a large burden to complete, but I intend to center around major cities, and include outlying areas in the package. I have not yet decided on which cities to begin, and those decisions will depend on the responses I receive from these mailings.
I would appreciate if you would send any information about your area you might have (including frequencies, procedures, equipment, addresses, personnel, contacts, ham radio networks, local laws, district boundaries, unit numbers, geographic information, service providers, or anything else) to me via e-mail to 'campguy@zelacom.com'. If you would prefer to photocopy information to avoid typing, you may mail me at Wormuth Companies, Post Office Box 481, Ellenville, New York, 12428.
I would appreciate any assistance you could provide. It is my hope that the public will benefit from my efforts, and that you will benefit if the need arises. I have spent two years laying the groundwork for this undertaking, and I have the resources, equipment, time, and desire to make it happen. The only thing missing is the information. I have thousands of pages of material already, but it is not enough. With your help, and the help of those like you, we may just save a life.
I thank you for your your time, and I look forward to hearing from you.

Keep your receipt and pay a visit to the Canada Customs office at your point of departure where they can give you the paperwork necessary to reclaim all/some of the tax (I'm not sure if you can reclaim both levels of tax - but it's still worth a try) paid.

Hi Fellow Scanners,

Anyone know of Space Shuttle freqs in NY, PA, NJ tri-state area? When I lived in the San Francisco Bay area they were "broadcast" from a 2 meter repeater at the Ames research center.(or so I was told). Should I search the 2 meter band (144-148 Mhz) or does anyone have more specific freqs?

Thanks in advance,
Rafael

I know this is the place for thiskind of question, but I don;t know
whrere else to ask it.

I am looking for walkie-talkie with an in the ear mic/earphone.
preferrably with at least 3 channels and fairly cheap. Radio Shack
has whatI am looking for, but would like to know if there are any
alternatives. Doea anyone know of any other such radios???

any help would be greatly appreciated!

About 5-10 sec.

I would attribute it more to latency in the conversion/transmission of
RA
than to any kind of intentional delay being added.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,
taxis, and buses are all equipped with radios and you can

listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell or import recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in

semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for | $9.95 + shipping from Grove Enterprises, 7540 Highway 64 | West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the

action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting | coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

CTCSS and DCS signals are transmitted subaudibly along with the voice information on most land mobile two way radios (except trunked systems).

You can program a specific CTCSS or DCS code into each memory channel. There are over 40 different CTCSS codes. | Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals because they are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to listen to. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and

place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these | alternative antennas for use with portable scanners: |

1. The Icom FA-1433B dual band flex antenna, a thin and | very flexible rubber antenna, is slightly longer than | a stock heliflex but provides better performance. |
2. The Austin Condor is a 12" long rubberized antenna | available for about $30. While considerably longer | than the stock antenna and the FA-1443B, the Condor is | very flexible and provides VHF-high band reception | superior to both. It is not designed to cover the | VHF-low band. |
3. The "Thin-Stick" is an 18 inch telescoping antenna for | extended range. It is made in USA by Smiley Antenna | Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers. |

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC | 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g.,

changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service. |

For information on "virtual downconverter" modifications, | see Steve Donnell's article in January 1995 RCMA Scanner | Journal or February 1996 Monitoring Times. Reprints of | articles from Monitoring Times are available for $2.00 each | plus a self-addressed stamped envelope from: |

Grove Enterprises, |
7540 Highway 64 West, |
Brasstown, |
NC 28902. For a free catalog, call (704)837-9200. |
Telephone (orders only): (800)438-8155. |

I don't get any part of the $2.00.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs

scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain selected business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new, 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants,

missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by

the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or

inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

Michael,

What I think is great, people did not ask what the add ons were, they just slammed the poor guy. What a tight community we are. The government will surely have no problem taking and controlling our scanners with individuals that do not think before they speak.

You brought a good point and thought involved. Thanks for respecting the person.

Joseph

3680. Pro-62 Problems

Newsgroup: rec.radio.scanner
Date: 1997-01-29 00:00:00 UTC
From: "Mr. Clem" <restaurant@edge.of.universe>

My 2 year old Pro-62 just started acting up. It appears to be
operating just fine, display and all buttons function normally. It seems,
however not to be getting a RF signal as it will scan right past frequencies
in use, also no sound when the squelch is turned all the way down (continues
to scan). For a while I could give it a bit of a shake and it would operate
again but that no longer works. Any suggestions before I turn it over to the
Droids?

Didn't you pay attention to the broadcast???

It wasn't a recording of a cellphone via a scanner. It was a
recording made at the police headquaters where the double murderer
called.

Call any police station and you will be recorded whether or not you
use a cell phone.

CALM DOWN.

Poor sound on digital? I have the Sony DP900 or whatever it is called, it is digital, sounds like any other phone (Even better than my old Cobra!). Its got better range than analog, and security. I mentioned I would never buy one, the only thing that changed my mind was Sun TV pricing it at a measly $100. Considering all the standard phones on the high end fall in that same price range, why not give it a try? It is kind of small though. It also doesnt interfere with other cordless phones. I now have 3 cordless phones, an AT&T, a Cobra (which is 14 years old), and the Sony. I also have another AT&T in which the battery died that was superior to all of them, and radio shack has to special order it, which maybe eventually I will do. Considering the original writer of this note is willing to pay $110 for an analog, perhaps some shopping around should be done, especially since I can get a few different 900Mhz cordless phones (analog) for under $100. A digital is ok, especially if you want longer range, and worry about security. All 900Mhz cordless phones should be fairly static free. Sometimes you can even get away with a good 25 channel standard cordless phone, which might be the cheaper road.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plust is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is expected soon and will be available from Grove Enterprises for about $30. This second edition is crammed full of police, fire, local government, news media, sports,

national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the world's largest scanning club, the Radio Communications Monitoring Association (RCMA). Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC

information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or

money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. Rich Barron | maintains an interesting site at www.exo.com/~rbarron.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base

which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was

on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping

transmissions, scanner enthusiasts can unearth new
information.

Ron: At one time ICOM offered a combo HT-scanner. I think that it only
covered 2m x-mit though. I don't remember the model number and I'm sure
that it's no longer in
production.

BOB: It will work SUBSTANTIALLY better. I moved my shack discone from the
attic to the roof and I couldn't believe the improvement. Athough the
roof location is only about 10 or so feet above the attic mount, the lack
of attenuation from the roofing shingles makes a big difference. Wet or
snow covered shingles also increases signal loss. Good luck.
John

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

To order a user manual for an Electra/Bearcat scanner, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know

if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold.

That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 5A95, means the scanner was made in the 5th month of
1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be
ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a
Photophacts from Howard Sams Publishing division of

Prentice-Hall at (800)428-7267.

Parts may be ordered through your local Radio Shack store
or through Tandy National Parts, telephone (800)442-2425.

G & G Communications (telephone (716)768-8151) is a family
owned company which repairs scanners and stocks parts for
several older models, especially Electra/Bearcat and
Regency brands, but they don't sell manuals or schematics.
They are located at 9247 Glenwood Drive, LeRoy, NY 14482.
(http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or
ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight |

The backlight in many base models, including the PRO-2022,
PRO-2004, and PRO-2005/6 is implemented by an
electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is
designated EL-501, and is identified by Radio Shack part
#10800050. A new EL panel can be ordered through your
local Radio Shack store and sent to your home for about $12
plus shipping. Radio Shack no longer sells replacement EL
panels for the PRO-2004.

Replacing the backlight is an operation which requires care
and patience. The service manual has an exploded parts
diagram which is helpful in showing how to disassemble the
scanner.

GRE-Built Portables: Worn Out Keypads |

The keypad on late model GRE-made Radio Shack portables,
e.g., PRO-39 and PRO-43, can become unreliable after
prolonged use. The best repair is to replace the rubber
keypad instead of trying to restore contacts using
chemicals. A replacement rubber keypad may be ordered
through your local Radio Shack Store for about $4.00. |

PRO-43: Loss of Audio |

Early PRO-43s were built with a 200 mW speaker (mfr's part |
#EAS-3P123A). The voice coils in some of these speakers |
have opened, resulting in lack of audio output, though |
audio is still available from the earphone jack. A more |
capable 500 mW speaker is available through Tandy as |
replacement (EAS-3P127).

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For |
example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, |
and 49 - 54 MHz versions. There are two VHF high band |
versions of the R8000: 148 - 158 and 158 - 175 MHz. |

Although UHF versions of the 700 series were made, they are |
somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are

suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very | desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and | are housed in metal cabinets of various colors. The R8000s | are use the same MC3357 IF/detector/squelch IC used in | crystal scanners, but their crystals are not | interchangeable with ordinary scanners. R8000s were made | in the Chief (tone decoder & carrier squelch) and Patrol | (carrier squelch only) models: |

Band (MHz) Chief Patrol |

_____ |
30-54 R8190 R8150 |
148-174 R8200 R8160 |

Table 3. Plectron 8000 models |

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier

activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal
Signal in University Park, IL, phone (800)524-3021. You
can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone
(800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 60 old and new scanner radios and monitor receivers. Other topics include:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but you can save lots of money if you get a good deal on a used scanner. Hamfests are probably the best place to find used radios, but you must be familiar with the equipment. Hamfests are repleat with older radios you won't see in today's catalogs.

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Grove Enterprises (Brasstown, NC) and Radio Shack repair scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units

unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 , Bearcat BC-101 , and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot

on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of | these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1995 - modifications & tips for the Uniden/Bearcat BC9000XLT|
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500 |
Feb 1997 - Radio Shack PRO-2045 |

Note: Reprints of Monitoring Times articles are available for $2.00 each (plus self addressed stamped envelope) from | Grove Enterprises, 7540 Highway 64 West, Brasstown, NC | 28902, tel. (800)438-8155. I don't receive any part of this $2.00.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector.

Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the | ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the

back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Rugged construction. External power supply. DB25 RS232C connector. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than

programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a

divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images.

Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized.

Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack | provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR

scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be

programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are | for FM broadcast only. Built in alarm clock, priority, and | memory which requires no battery backup. Covers 30 - 50, 88 | -108, 118-136, 144-174, 440-512 MHz. Notice that it's not | spec'd to cover some important federal bands: 136 - 144 and | 406 - 440. |

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 | banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 50 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. Watch for review by Bob Parnass in future issue of Monitoring Times magazine.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a

portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly

different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios.

Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6		X		no
FR2512	24	X			no
FR2513	24		X		no
FR2514	8	X		yes	no
FR2515	8		X	yes	no
FR2526	10	X		yes	yes
FR2527	10		X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been

replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with

center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

CBS had the cell phone conversation from the Bronco chase on TV last night. I guess they figure that if the Martins aren't going to get any slap on the wrist, then they are allowed to play any cell phone conversation they want also. What gives? I KNOW if I gave my tape of a cell call to somebody, I'd be in a load of shit because I'm one of those low life scanner listeners. What gives? Any comments?

I am not sure that there is anythign that can simply be done to the 51 with that date code. I know earlier ones were a snap. There is a company that will "unlock" the model look for their ads in Pop Com. As far as rating the unit as compared to other RS models its about middle of the line. It is a good scanner and at the deal prices you can find it for it is worth it. The Pro-60 and Pro-26 are the top of the line RS handhelds. I have both the Pro-51 and Pro-26 and I have to say the 51 is a good all purpose police scanner which picks up a lot of cellular images in the 900mhz range. As far as ease of use, the pro-51 is one of the easiest scanners to use sold by RS. I think the main flaw with this unit is the cheap speaker it has in it the audio stinks, same with the 26 and any of the new RS scanners. Nothing beats the audio you get from a Pro-46 that was a good scanner.

Cheers

Steve

>know it was a 900 mhz phone? It was mine.

I could be mistaken, but I believe that there are 900 MHz analog phones on the market, usually costing less than their digital counterparts. The catalogs I've seen offer analog, digital, and spread spectrum 900 MHz phones, with price increasing in that order.

Recently, I had a VTECH 950 NDL whose operating frequencies were about 902-905 MHz and 925-927 MHz, according to the information VTECH included with the phone. The phone had battery-related problems, but those problems did not interfere with the quality of a call.

But while making a call, I also had the same problem Gary Hoeffler appears to report: My scanner not only failed to receive voice transmission, but also failed to lock on to a frequency in either the 902-905 MHz or 925-927 MHz ranges. I expected not to receive voice transmission, but I DID expect to lock onto a frequency featuring a scrambled signal of some sort. Good news, perhaps, from the 950 NDL privacy perspective, but the lack of any "lockable" frequency befuddles me. Any ideas? To my knowledge, the 950 NDL is digital, though not spread spectrum.

I don't think this analogy is a good example. The key question is whether the transmission media is a public resource or not. On a cable company, it is a private resource, just like the phone line to your house. End of story. Standards can be established for the use of that private resource, just as the phone company can tell you that some telephones are not suitable for their service.

> Now, what about those scanners? Certainly, using one to aid in the

>should mere posession and/or use of a scanner constitute a criminal act?
>I think not, in general. (For the moment, I speak only to reception of
>unencoded, over-the-air receptions.)/

This is more vague than you may realize. What exactly is "unencoded"? If someone transmits a digital signal using ascii text over FSK but at a non-standard speed, is it encoded? What if they use a standard spreading code with spread spectrum? Is that encrypted?

<the rest of this argument, interesting though it is, snipped>

Marty, your argument seems to assume that there is "encrypted" and "not encrypted" when it comes to communication. Encryption is a matter of degree, not absolutes. Asking a government to regulate encryption is like asking it to regulate free speech. You really don't want them to do that.

I agree that anything broadcast on the electromagnetic spectrum ought to be considered a public medium. If you don't want the public to understand what you're doing, encrypt or encode it! In 1934, the act which created the FCC realized that receivers can't be traced. People are going to monitor the airwaves, just as people are going to look out their windows. They chose not to regulate reception much, just what one may do with what one hears. This predated most of the strong encryption techniques.

I'll go further. Now that strong encryption has been around a while, I propose that anything broadcast over the air may be used as you see fit. Everything. My ham radio chatter, company two way radio traffic, Air Traffic communications, any military traffic, the Multipoint Distribution Service (what an awful idea that was), Satellite traffic, EVERYTHING will be considered public. Copywritten program material will retain its copyright of course, but reception should not be restricted in any way. With the availability of good encryption, this is a reasonable thing to do. If it matters that much to you, encrypt. And if your encryption is broken, too bad!

Obviously, if someone is ignorant, stupid, or otherwise technologically handicapped, they're screwed. But that's no different than the situation we've always been in. Those in the know have always profited more than those who are not. Let's call a spade a spade and not pretend there's no such thing as Social Darwinism.

Over the last 10 years there have been 2 or 3 fires in my neighborhood
and the same public insurance adjuster always shows up trying to
locate the "victims" so that he may try to sell his services. Once he
even asked to use my phone to call his office. (At that time there was
no close cellular cells. Assume he has "upgraded" to a cell phone.)
He obviously had someone at a home base somewhere who monitored the
local fire frequency for "leads".

I always viewed the guy as an ambulance chaser. If a lawyer did what
he did, the lawyer would be subject to disciplinary action. However,
he did provide a service in that he at least made the homeowner aware
that persons are out there to help them get a better settlement. As a
lawyer, I can tell you that most people who sue over an insurance
claim probably would have never sued if the insurance company had only
treated them reasonably at the outset.

It is not practical to build a decrypting scanner, especially with robist encryption like Skip Jack for example. By the time public service comm go all encrypted we'll have other things to worry about besides scanning

Now, digital voice comms is a different matter, and scanners with that mode will likely be available.

3712. Intermod on BC9000XLT

Newsgroup: rec.radio.scanner
Date: 1997-01-29 00:00:00 UTC
From: lui@netcom.com
Message-ID: <luiE4s5u8.6Gz@netcom.com>
Source record: 209706
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Well, after hearing all the positive comments on the BC9000XLT, I decided to get one which I received my yesterday.

I was looking for a scanner which I could connect to my external antenna (an RS discone on a 5 ft mast on a 2-story townhouse) and not have problems with intermod. My BC3000XLT works okay if I use the attenuator, but still has problems with intermod.

I use 75 feet of flexible 9913 type cable from the antenna to the scanner.

THe BC9000XLT doesn't do that much better. I get intermod on several of the UHF channels I scan (like another amateur repeater over the one I want to monitor). I only listened for a short while, so I haven't been able to determine the exact nature of the intermod, but it seems most of the problems are on UHF. Activating the attenuator doesn't seem to have that much effect. The attenuator on my BC3000XLT seems to make more of a difference.

The intemod isn't paging signals, but rather other frequencies mixed with the frequency I'm listening to (seems like another UHF frequency). Of course, all the problems disapper when I use a rubber duck antenna from my BC3000XLT.

VHF and 800 MHz seem to be unaffected for the most part.

I could add the optional CTCSS tone board, since almost all of the UHF and VHF (and most of the 800 MHz) frequencies I listen to send PL. How much does this slow down the scan rate?

So far, I don't have a radio which handles my external well. My BC3000XLT seems to do the best (surprising for a handheld scanner), the BC9000XLT does okay (too bad the attenuator doesn't help more), my Yaesu FT-50R is just terrible, even with the PL decoder and my BC145XLT isn't much better than that. Guess I'm spoiled with my commercial Motorola mobile radio!

Does this mean I just need to spend the bucks and get an R7100 or R8500?

I live in the *VERY* RF rich Los Angeles area!

There was one last week selling for $250. For $600 it better be brand
new with a opto board installed and software.

Stephen,

I also live in an RF trap, the Salt Lake Valley. I use the CTCSS (PL) decoder in my 9000 XLT and it helps immensely. I don't know if it slows down the scanning speed or not, that's an interesting question! At any rate, the CTCSS option made the 9000 liveable in terms of intermod and images. Note the 9000 may pick up cell phone images below 400 MHz, you are probably experiencing strong image mixing.

I'd say try a used Pro-2004, which is dang near immune to overload and images (at the cost of absolute sensitivity) or a Pro-2005, 2006 or maybe try the new Pro-2042. If you want to go all out, sure fork over the $2K for the 8500 which is widely agreed to be excellent.

I've had excellent results with the 2004, 5 and 6.

Hope that helps!

Yes.

If you taped it, go back and watch it again. What you hear is a recording,
done by the police at the 911 dispatch centre, made by Simpson or
whoever the hell had the phone during the entire low-speed chase. Let
me re-iterate: THIS CONVERSATION WAS NOT INTERCEPTED OVER THE AIRWAVES.
No ifs, ands, or buts. You call 911, you get taped.

Taping 911 calls has been standard procedure for *years*, and is
absolutely nothing new. Police have routinely released this information as
a matter of fact during the course of an investigation - look at what the
FBI did just recently when they released the 911 call alerting police to
the bombing in Atlanta during the Olympics.

Get the facts next time before you get all high and mighty.

Furrfu.

Tom: these are the ones I know for St. Charles and St. Louis counties.
I don't ever listen to St. Louis city. Most of these apply to the
highway patrol, too, although their's are a little different.

10-1 Transmission unreadable "you're 10-1, try again"
10-2 Transmission loud and clear

10-4 Message received and understood (not necessarily Yes or No or OK)
10-5 Meeting "name a place to 10-5"
10-6 I'm busy - don't call me on the radio "Station is 10-6 for
<reason>"
10-7 Out of service "The computer is 10-7, I can't run the plate"
10-8 In service, i.e. done with the call I was on
10-9 Repeat "can you 10-9 the street, you were covered"
10-10 Fight, or riot, depending on scale.

10-12 Stand by

10-17 Person who called 911. "The 10-17 will show you which house"

10-19 The police station
10-20 Current location
10-21 Telephone call, synonymous with "Public Service" 10-21-19 means
call the station
10-22 Disregard, cancel
10-23 I've arrived at the scene you dispatched me to

10-27 Driver's licence check
10-28 Licence place check
10-29 Stolen vehicle check. "Negative '29, ABC123 comes back on a '92
Ford..."

10-32 Gun

10-41 Starting shift
10-42 Ending shift
10-43 Information, "Just for your '43, this is the second call on this"
10-44 Meal break

10-46 Disabled vehicle. 10-46 J3 means it's blocking a traffic lane

10-50 Vehicle accident. J1 means minor, J2 means injury, J3 means blocking, J4 means fatality
Can be combined: 10-50 J2J3
10-51 Tow truck
10-52 Ambulance

10-55 Drunk driver
10-56 Either drunk but not driving, or drugged - I'm not sure

10-68 I'm ready for you to give me that information. "Copy a 10-28" "10-68" "ABC 123" "10-69"
10-69 I copied the information

10-74 No!

10-76 En route to a call. Car is dispatched, calls 10-76 when it's on it's way, 10-23 when it gets there, and 10-8 when it's done.

10-81 An arrest, or prisoner, depending on context

10-89 Yes!
10-90 Alarm sounding

10-95 An officer's house "I'm 10-44 my '95" means I'm stopping by my house for lunch.

10-97 A want or warrant, the result of a 10-27. The higher the J number the more serious the charge. J3 means "armed and dangerous" I think.

If anyone has any corrections or additions for the St. Louis area, chime in (like you need to be invited!)

-Carl

For Sale: Uniden BC220XLT

Frequency coverage 29-54, 108-174, 406-512, and 806- 956 MHz (minus cellular). 200 memory channels in 10 banks include 10 priority channels for instant access to important transmissions.

TurboScan and TurboSearch provide 100 channel per second scanning and 300 channel per second searching! Preprogrammed service search affords single-key access to police, fire, emergency, aircraft, marine and weather frequencies! Data skip avoids noisy data transmissions, stopping only on valid communications (during search only, not during scan)! 2 second scan delay (selectable per channel)

Up to 10 priority channels switch you instantly to important transmissions regardless of monitoring status.

See a picture at http://198.111.46.20/~th4mucs/scanner

$200 or best offer. Full price buys free shipping! Will ship COD via USPS.

E-mail: tekelek@erols.com

End Antenna Restrictions Now, Hurry!!!!!

Gaithersburg , Maryland

FCC PUBLIC NOTICE DA 97-118 ACT NOW!!!

YOUR BEST CHANCE TO END ANTENNA RESTRICTIONS AND
COVENANTS.

January 16, 1997: Petition Filed Seeking Declaratory Ruling That Certain Provisions of a Homeowners Association Covenant are Preempted by the Commission's Over-the-Air Reception Devices Rule.

The Commission has received a Petition for Declaratory Ruling from Jay Lubliner and Deborah Galvin asking the Commission to determine whether Potomac Ridge Homeowners Association's (PRHOA) prohibition of outdoor antenna installations is preempted by Section 1.4000 of the Commission's rules. The Petition alleges that the PRHOA restriction violates the Commission's rule prohibiting restrictions that impair installation, maintenance or use of over-the-air reception devices (satellite dishes and antennas).

The Petition is available for public inspection in the Cable Public Reference Room, 2033 M Street, N.W., Room 333, Washington, D.C. 20554, 202-418-7092. Copies are available for purchase from ITS, Inc., 2100 M. Street, N.W., Suite 140, Washington, D.C. 20037, 202-857-3800.

The Telecommunications Act of 1996 allows those who cannot otherwise receive over the air television reception to have a TV antenna 12 feet in height or less regardless of any homeowner's deed restrictions and covenants. As we were unable to see our television without interference, we were in need of a TV antenna, under this new law,

to adequately view television. Thus.... the petition to the FCC.

At the same time, you may be interested to note that this Telecommunication Act of 1996 has language that will affect cellular, paging, commercial and amateur antenna restrictions! Two prior notices of rule making are on the books this year which sets precedence which may support the end of antenna restrictions if the FCC holds up this TV antenna ruling next month favorably, by allowing the TV antenna to remain on its rooftop location so that we can at last see television in our home.

For those of you who are as concerned as we are, we urge you to please write a note or letter to the Office of the Secretary, Federal Communications Commission, 1919 M Street, N.W., Washington, D.C. 20554 referring to the case identifier, CSR-4915-0, on all of your letters, voicing your support for us being able to have a TV antenna on our roof. The Commission asks that you should file an original and two copies of your letter or note.

For more information on this act you can talk to the Cable Services Bureau Contact: Eloise Gore at 202-418-1059. Internet: http://www.fcc.gov.

Nothing wins "hands down", they are both great scanners, no doubt about it,
only difference is that the 9000 has more channels and a different readout.
But the 8500 and 9000 xlt can be heavily modified making them equal.

Source record: 209728

Sensitivity on the 8500XLT is poor. The radio is damn near deaf as compared with the 9000XLT. Sensitivity on the 890XLT is good, but it has tremendous problems with images and intermod. The only one of the three that I can recommend - and I've owned all three - is the current model, the 9000XLT.

As far as I can tell, all 900 mhz phones are digital. It is possible to hear them. I've seen it done with a scanner with a CTCSS tone board, built in descambler, 32 megs of ram onboard, etc. So it is possible. How did I know it was a 900 mhz phone? It was mine.

Other than the security there are no advantages, only one HUGE
disadvantage: poor sound quality of digital models. My analog Sony
sounds exactly the same as my Panasonic corded office system.

Source record: 209740
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.amateur.misc

I'm sorry if this isn't the right place, but I'm looking for an adaptor for a Motorola HT-600's microphone jack. A friend uses it at his ambulance, but it requires a special "external" microphone. He has a regular one, however the connections are not "normal". Is there any adaptor that he can purchase, rather than this special microphone (which is $75..) for this unit? He has the regular Yaesu type (or Radio Shack "style") microphone.

Thanks in advance.

Please reply by email (read my sig..)

Here's another story of a badly misinformed salesperson telling fairytales of something that doesn't exist, the "memory effect". It hasn't existed in any Ni-Cad battery made in the last 5 or so years, ask any battery engineer!

The other day I checked out the McDonalds frequencies on my Percon database. found many frequencies in the state of OH. There were many listings with the store number listed. I called the local McDonalds and asked what store numbers were in the area and you would have thought that I had asked for a top government secret. I was informed by no uncertain terms that those numbers were confidential and that I had no right to ask for them or to scan their frequencies. Since then I just sit and smile as I go through the drive-thru after searching and finding the frequency. Please remember don't ask for store numbers, that is a matter of national security.

I'd like to see more of this actual "sold" information posted on this group. That way, we could bette establish market value for scanners for sale. If you post a "for sale," please post a "sold" closure. It will help us all within and outside of this newsgroup.

Perhaps this has been covered, if it has I must have missed it, but
does anybody know the details of the scanner used in the Gingrich wire tap?
I heard on the radio today that it was a 200 channel, handheld model which
might have had a cpu swap in order to render it cellular capable. If so I
would think this shoots a bit of a hole in the Florida couple's pretenses
at being unsophisticated rubes who just innocently happened upon, mercy
sakes, a cellular telephone conversation! After all, removing and replacing
surface mounted devices is NOT a casual activity. Has there been any new
information on the scanner model number, and how it was modified and who
modified it (sounds like a professional job to me)? I'ld be real
interested in this info if anybody has something new.

Here in the Phoenix area there was another car chase today..a suspect
stole a state department of Transportation truck..the DOT workers were
painting over grafitti and left the keys in the ignition..it was
reported..the suspect jumped in and drove off....I was working in the back
yard..saw a police helicopter about a mile away..appeared to be tracking
something below..I raced inside and turned on all 4 of my scanners...
I'm glad I have 4 scanners...because the action was taking place on
several different frequencies
Phoenix Police CH-4 South 155.37
Maricopa Co Sheriff ch-1 West 460.05
Highway Patrol/DPS 460.325
Tempe Police 860.7375

The helicopter was able to talk to several different agencies but the
PHoenix units could not hear or talk to units from other agencies directly
unless they relayed through their dispatcher.

>On some of our police channels they use DVP every now and then.

>My question is do the radios have to be switched on to DVP or are they on
>all the time. Can they do DVP and analogue?

From what I know about DVP, it can be manually switched on and off.
Smart Officers would have it on all or most of the time when
conducting covert and tactical assignments.
>Sometimes one unit is in DVP but the other in plain voice. Is this common?
>Do they know this?
It happens now and then, I think there is a light on the radios to
show when the radio is secure. Sometimes officers thing they are using
DVP when in fact they are not, this is when us as scanner hobbyists
can get some of our best listening!
>Also, what does DVP do to the radio performance. More/less range? More
>power?
DVP reduces the power by approx 25%, a 25watt mobile becomes a 5watt
mobile. If a large group of officers are do surveliance they might
have to come out of DVP so they can hear each other. I heard this
happen on a customs surveliance job, the officer running the operation
said on air "Change to channel _ _, still no DVP"

Hope the above helps,

Perhaps these "accessories" include things like an OS456 interface,
software, Scantenna and cable... That's the only way the buying or selling
price would have some connection with reality.

> the 9000XLT.

I have a 8500xlt and find the sensitivity to be more than adequate for
metropolitan areas. I routinely picked up communications from as far away
as 30-40 miles with just the stock telescoping rod antenna. The
programable digital readout made station identification easy and I
enjoyed the selective recording function. This made monitoring
infrequently used channels over 24hours easy. The only negatives I had
were; trailing squelch,(the channel hung on seconds after voice
communication had stopped,) and an annoying birdie on one of the
frequencies used by the local P.D. (Tuning 10Khz off center still allowed
for monitoring of the channel however.) Over all a nice base station and
a complement to my AOR 1000.
Unfortunately I live in the boonies now and the Bearcat gathers dust
on the shelf most of the time.

In the McDonald's i've been to, they have a bulletin board next to the
cash registers where their FCC license is posted. The license lists
their frequencies. Also, if the license doesn't have the store number
on it, it can be found on another document nearby.

3774. monitoring 900MHz cordless

Newsgroup: rec.radio.scanner
Date: 1997-01-29 00:00:00 UTC
From: Ryan McCarthy <MidNiteStorm@worldnet.att.net>
Message-ID: <5cnk59$d8a@mtinsc03.worldnet.att.net>
Source record: 209768

Not all 900MHz cordless phones are digital & you can end hearing their conversation. On one of the nets I listen to on 2 meters I heard a ham meniont that a family member to come by with his scanner to see if their conversation could be heard. Low & behold it was heard.
I'd say if they do not mention anything about digital scrambling or spread spectrum then they are not scrambled. Don't be thrown of by digital codes. Those are to prevent someone else with a cordless phone from activaiting yours.

I've used the DOS version of that program. I built the circuit. It hooks up to the parallel port. Works perfectly as far as I can see.

I recently purchased a SC150 and being new to scanning did not realize that this radio will not scan the Citizen's Band channels. I have been reading posting concerning mods to this radio but have not seen anything about this type of modification. Is there someone more experienced than I who can shed some light on this?

I was thinking about purchasing the BCT7 but decided on the SC150. If there are no modifications, then I may have an almost new SC150 for sale. Thank you in advance.

Pull your head out of the sand, when all police radios go digital in the near future you can throw away your $200.00 to $400.00 scanner. That will be the end of scanners.

Rest my Case

Your local Radio Shack dealer should have a catalog from which you can order them. Last year they were $5 each and the service by mail was very prompt.

Be sure to take the model number with you. There are two kinds of crystals available, depending on the intermediate frequency of the scanner (10.6 or 10.7 mhz).

I want your advice and suggestions on purchasing a good used portable scanner for carrying to car races. Keeping in mind a low budget and I don't want hundreds of channels, what I do want is to have maybe 10 channels or driver #'s to choose from and reliable (as possible) reception. I do want the ability to switch from one series to another easily.

Thanks
Pinky

Source record: 209427

Yesterday on the way home from work I turned on my BC-350 A scanner as matter of routine. It's set to scan the freq.'s I plugged in the private mode. All was going fine until it got stuck on a channel as tho a mic was stuck open. As usual I pressed the "private" button and then heard a real short series of beeps. I glanced at the screen and noticed the display channel read ch.10 000.0000. As I got to a light I pressed it again and no change. I pressed the "up" and "down" buttons and saw it would go up or down the channels but with all ch.'s reading 000.000. Then when I got home took a closer look at it and saw in small letters the words "memo loss". Does anyone know what happened here? Will I expect it to happen again in the furture? I've had it since october and got it used so I don't have a manual to look through.
Really appreciate any help here.
Jerry

Tom,
An attenuator is a device which reduces signal, whether RF or audio. They have been included on some of the newer scanners to to help minimize interference from intermod and strong local stations. Most of the internal attenuators are rated at 10-20 dB which is a considerable drop. If all you are receiving is local sigals, you could use it and probably not have any drastic effects, where you will notice it's greatest effects are on distant signals. It does help some poorer receiver designs cope with local paging and high-power stations blocking desired reception. Attenuators are also used in audio to match a line-level output to a mic-level input when using a CD player as a recording source connected to a portable cassette recorder.
Hope this helps..

jim_a_cameron@ccm.fm.intel.com "Jim Cameron" writes:

> Is anyone aware of any modifications for the Radio Shack PRO-60?

To restore 800MHz "full coverage" ?

As with most of the most recent RS (mfr by Uniden & GRE) and Unidens own sets the frequency "coverage" is controlled by the main IC rather than a Matrix of Diodes or similar as on some earlier sets.

The US PRO-60 uses a CPU that has the US cell frequencies blocked out, the version sold here in the UK and elswehere in Europe uses a different CPU (the only different component between the two "models") that does not have the frequencies used by US cellular blocked out.

The only way to restore the frequencies used by US Cellular and allow keyboard entry is replace the main IC (a 100 pin'ish surface mount chip) or the complete logic board with the CPU already fitted.

The PRO-60 however does not have programmable increment steps and you would find if you did replace the IC then it would step through the 800MHz frequencies in 12.5KHz increments. US cellular uses 30KHz.

Hope this helps.

An attenuator is a device (circuit) that reduces the strength of signals coming into your receiver. Its purpose is to reduce overloads caused by strong stations. Some receivers do have a switch to turn the attenutor on or off. My RS 2005 has an attenuator. Toggling the switch while listening to a station does cause a change in the signal strength. However, I have not found a situation where leaving the attenuator on helps, so I just leave it turned off.

Same question I had a while back and I did some investigation. You will be happy to know that while you can pick up 900 mgz phones they have very limited range. In fact a good test is go outside and see how far you can talk on your phone. My experience has shown me that this is as far as a scanner can pick it up also. Strange because I can pick up low band (46.00 ect) a good half mile or more away from the house.

Hope this helps....Joe Colson

Looking for frequencies for HT's carried by Hall Entertainment Security. They provide security for Cleveland and Akron, OH venues such as Gund Arena and the Music Hall. Any info would be appreciated.

>to detect people receiving cell frequencys (much like how the Television
>Police sniff out unlicensed TV sets in Europe).

Already happening in Virginia. They call them "radar detector detectors."

My Betty Bearcat (police only) book shows no 800mhz frequencies but it shows the base of 154.875 for Saratoga Co Sheriff. There is another Betty Bearcat that's a regional directory (mine shows southern region only). You might check that for the 800mhz.

This probably isn't what you need but I wanted to give some input.

While reading article <5cqkeu$dbm@news.acns.nwu.edu>, I noticed that
gof@jules.chem-eng.nwu.edu (Jerry Fountain) said the following:
>I noticed Toshiba has a new series of 900MHz phones. One even has callerID
>on the handset (plus it's full digital). Anyone have any experience with
>them?

The Toshiba phones I've seen have been nothing but slightly resculpted OEM'ed
VTECH Tropez units. If you see them, compare them with the latest VTECH units
and you'll likely notice more than a passing similarity...

>Anyone know the relationship between the VHF VOR channels
>(108-118MHz)
>and the tx and rx frequencies of the associated DME
>transponders? (900-1215MHz range).

I don't believe there is a relationship. DME frequencies are paired,
and both air and ground frequencies are in the 962-1215 MHz range.

73 de Dave, NF2G

P.S. Monitoring Times ran an article a month or two ago about ILS
frequencies, but an apparent typo in the description of the channel
allocations made it impossible to determine the exact frequencies that
are used.

What follows are my personal impressions regarding a recently
published book on radio monitoring. This, in no way, should be viewed
as an endorsement to purchase this book. I have no personal or business
relations with either Index Publishing or Mr. Arey.
These are simply thoughts offered to my fellow hobbyists who may
be interested in purhcasing this book. Enjoy!

Radio Monitoring
The How-To Guide
by T. J. "Skip" Arey WB2GHA
Paperback, 337 pp, $19.95, ISBN 1-56866-101-1

1997 INDEX PUBLISHING GROUP, Inc.
(800)546-6707
http://www.electriciti.com/~ipgbooks

Hot off the press for 1997 is a new book by T. J. "Skip" Arey who has
been an Extra Class amateur operator for almost 20 years, has written
the "Beginner's Corner" column for Monitoring Times magazine since 1988
and been an active radio monitor for more than 25 years.
This book is intended to introduce the hobby of radio monitoring to
the most innocent newcomer. In this capacity, Mr. Arey does a wonderful
job! The book itself contains 57 chapters(don't worry, some of the so-
called "chapters" are really one or two pages), an Epilogue, 5 appendices
and an index.
The book is organized quite well with the chapters being divided into
six sections which could be referred to as Introduction, Mediumwave,
Shortwave, VHF/UHF and Odds-n-Ends.
The Introduction chapters bring the reader up to speed on what exactly

radio monitoring is and how enjoyable it can be. Next is the history of radio starting in the early 1800s and introduces us to its pioneers over the years, ending with the invention of the integrated circuit. What follows next is an experiment with a typical AM radio which can be an easy way to introduce someone to radio monitoring using a simple piece of equipment found in almost any home or car. The final chapter for this section lays the very basic foundation for radio frequencies, wavelengths and modulation as well as the different frequency bands(from VLF up to EHF) and who typically uses them.
The next three sections deal with mediumwave, shortwave and VHF/UHF monitoring. Each of these section follows a similar outline indicating what can be heard, the cost for necessary equipment, receiver choices(and what to look for), antennas, accessories, propagation, monitoring techniques, time, clubs and organizations, publications, resources, computers, advancing your skills and concluding with a "chapter" reminding you to get your nose out of his book and get your hands dirty by doing some actual monitoring(all work and no play...).
The chapters which discuss the respective radios for monitoring are quite helpful. Although he tries to avoid pointing a finger at a particular radio as a benchmark, he describes the features that are most important and lets the new user in on some of the "lingo" used.
The chapters dicussing antennas are quite good and give good coverage of what can be expected from the basic types. For the VHF/UHF chapter, Mr. Arey points the use of RG-6 as a good low-loss, well-shielded co-ax cable but fails to dicsuss the difference between it's 75-ohm impedance and the effect on the typcial scanner whose BNC jack is labelled for 50-ohm usage. He also recommends RG-11/U, and 9913 but advises the user to steer clear of RG-58.
The accessories chapters could use a little more work in my opinion. He typically only mentions four or so useful devices. The author's chapters on clubs, resources and publications are very welcome to the new user and provide plenty of resource information to help the reference material start pouring in!
The final section of chapters deals with such subjects as amateur radio, longwave monitoring, FM and TV DXing, setting up an efficient and comfortable listening post, safety(power, lightning, etc), keeping a log and confirming your contacts, legal issues regarding monitoring and how other facets of this hobby that can keep the excitement alive as the years pass by.
The five appendices contain equipment suppliers(about 60), a bibliography, some basic internet resources(USENET groups, FTP servers and web pages), a radio spectrum chart, a few abbreviations and finally, a small biography.
The only glaring mistake I found in this book was a picture of a Uniden Bearcat BC200XLT which was mistakenly labelled as a BC220XLT.
A few times, Mr. Arey mentions he has been writing the "Beginner's Corner" column for Monitoring Times since 1988 but his biographical statements indicates a date of 1989. I guess we can let this one slide!
The author should be commended on his use of the most recent available information. WiNRADIO from Rosetta Labrotories, Australia is mentioned no less than three times. Mr. Arey also includes a "Radio Shack's Hall of Fame" page which pictures the Pro-2002, 2004, 2006, 43, 2035, 2042 and

26. He also includes a page titled "MORE CLASSICS OF AN ERA" and pictures the Sony ICF-2010, ICF-PRO80, ICF-SW1, Realistic DX-440, and the Uniden BC-760XLT and BC-200XLT(this is the typo; I'm not sure whether the intention was for the 200 pictured or the 220 stated in the caption). It would have been nice to see a page dedicated to Uniden, AOR and one just for HF equipment. And perhaps it is out of respect that he mentions U.S. Scanner News as a reference publication.

Having spent no real time monioring HF, I do not feel adaquate to critique the mediumwave and shortwave content. However, for the VHF/UHF sections, he points out that scanning is usually synonomous with police and fire listening but lets the reader know there are "hundreds of sidelines in scanning". I agree and feel that this is one aspect that many people overlook. However, in this same area, Mr. Arey only points out broad categories of police, fire, EMS, disaster services, military, maritime, aircraft, satellite, government, business and sports.

I believe he chould have help pique the reader's interest by listing sub-categories like news reporters, railroads, forestry, buses, security, construction, ham radio, CB, telephone/cable/water/power utilities and others. This is merely my suggestion for helping introduce the "newbie" to areas they might not even now exist. It would also help in keeping the interest level up by offering a wide variety of monitoring subjects to pick from. I think this has been helped tremendously by the introduction of the newly revised, nationally renown Police Call by Gene Hughes, which most people associate with Radio Shcak, which has begun to list commercial licenses.

Anyone new to the radio monitoring hobby will, after reading this book, owe Mr. Arey a debt of gratitude for the invaluable advice, information and insights that have been packed into this book. For such people, it comes highly recommended. For the rest of us, this book makes a fine addition to our library and contains a wealth of reference material as well as access to topics we should all brush up on now and again. Nice job "Skip"!

First, please pick a newsgroup so we don't have to have this
conversation twice (or so that others don't have to read it twice). I
am on rec.radio.scanner waiting for alt.radio.scanner to die off.

Second, yes I did notice your location. There is nothing that odd
about being able to hear OPP in Pennsylvania. The signal you describe
matches exactly the "busy" tone on their base transmitters.

York is a bit far south, I admit, so maybe your signal is coming from
some military operation in another state.

I've got it in my FCC rule book. 47 CFR Part 87 Subpart Q - Stations in the Radiodetermination Service. You should be able to find a copy of the rules at a large reference library.

For instance;

in MHz

VHF Channel Airborne interro- Ground reply fre-
gating frequency quency
108.000 1041.000 978.000
108.050 1041.000 1104.000
108.100 1042.000 979.000
108.150 1042.000 1105.000

Regards

Ed

An attenuator is a device that reduces a signal. It can be a stand alone unit or it can be installed in equipment (like a scanner). If it is installed in your gear, there is usually a switch to turn it on or off (depending on your requirement). As far as scanners go, the attenuator may or may not affect all channels at the same time (some are independently selectable).

Hope this helps.

Sure, get an OptoScan board (OS456) and download a demo copy of "Wave"
from AOL or CompuServe. Wave is a Mac application that runs the OS456
board. All you need to do is make the cable from an old modem cable and
off you go.

I have to wonder if you've ever HEARD the "improvements" created by
ASTRO... Everyone sounds the same, and in some cases, you can't even tell
if the other person is male, or female. Also, anytime you get into
multipath areas, you get nasty sounding chirps, and voice stretches. Kind
of tough not to have multipath in an area with hills. But, remember, (M)
says: It doesn't sound bad, it just sounds different.

: Shack has one for around $100. Is it any good?

Lroin,

Save your money. I bought it on sale for $79.00 and it wasn't even worth that I paid for it. I ended up returning it soon after I bought it. Go buy an Opto Cub (like $130.00) or if you have the money a used/new Scout. They are well worth the funds. RS's counter is only good if you are working on a lab type of environment, or control the transmitter. If you are expecting the RS device to find out freq's of passing cop cars, ht's, etc, forget it. And trust me,, I've tried it.

If I had $400.00 bucks to blow i'd buy the BC 9000XLT. With 500 memory channels, alpha numeric display, coverage from 25Mhz to 1.3 Ghz, + many more features, I think this is the better scanner for the money.

Simple, in the "subject" area type in your news groups that you wish to
post to and put a comma in between them with a space after the comma.
Like this: ALT.RADIO.SCANNER, REC.RADIO.SCANNER, REC.RADIO.SWAP, ETC....

>
> I guess one persons memory effect is anothers early failure?

The caveat about memory effect being a thing of the past will depend on
the charging system used. A recently designed charger utilizing proper
techniques should be able to avoid the memory effect of Nicad batteries
(some newer Nicad formulations help to reduce/eliminate this effect as
well).

This does not mean that there is no effect... only that proper steps
were taken to avoid/minimize the effect from occurring. Just because the
technology is capable of certain things doesn't necessarily mean that
manufacturing companies will actually produce/sell them - they tend to
go with least cost in order to maximize profits.

If you don't have a recent (properly designed) Nicad charging system,
then the best advice is still: Charge it up completely, do not recharge
until battery drained. My razor and cordless phone at home are still
using their original batteries (and they're over 5 years old) and I
still get long service out of them (I don't put them back on charge

until they're unable to provide sufficient power for proper use).

There is a relationship between VOR channels and DME channels. The DME receivers that I have seen tune to the appropriate DME channel based on which VOR channel is selected. I found a table that matches VOR frequencies with DME channels at http://www.avnet.co.uk/pooleys/france/31a.htm. I couldn't find the frequencies that correspond to each DME channel, though. Anyone have that info?

I respect Mr. Kucharski's opinions (he's reviewed a lot of phones and knows something about radios), but I'm quite happy with the audio quality on my Escort 9600.

I would suggest you try the Escort DSS models, but buy at a retailer where you can just take it back if you're not satisfied.

Ok, then what do you call it? My laptop battery *used* to last about 3-4
hours with minimal disk access. Now it won't stay up more than 30 minutes
just sitting at a prompt and no disk access (the drive spins down).

I guess one persons memory effect is anothers early failure?

Just curious. :-)

>work around it ...

Sorry, but you're listening to fairy-tales. The "memory-effect" is a little understood phenomenon that has been greatly exagerated and largely been debunked.

Once upon a time there was a neato-keeno invention called the Ni-Cd battery. No one really understood them, but they sure sounded nice when compared to the grungy primary batteries of the day. These things would last 1000 charges! Right!

Then the demons from the dark side (Ray-O-Vac, the Bunny Co. and the CopperHeads) saw this as badness. No, wait, I'm going to use this for a commercial!

The problem was, 30 years ago, no one really understood NiCd's or how to really get the most out of the technology. The chargers were really (really) crude and they batteries were very often over-charged. This is death to a NiCd. The "memory" problem came from poorly designed devices, or ones that were not designed for secondary batteries at all.

The essence of the original "memory problem" was that the cells exhibited a "voltage depression" of a 100mV or so when the latest *charge* was exhausted. In short, if you sucked down 50% of the charge of a NiCd and then recharged it, you would see a voltage depression of this 100mV or so. It didn't matter that that capacity of the cell didn't change (still did the same AH), but the appliance would shut down for lack of voltage. Remember, many of these applianves were designed for standard cells (before Alkaline's even) and did not even like the lower 1.2V (nominal) NiCd voltage. Hence, the fabled "NiCd memory" urban myth. BTW, last I heard this phenomenon had been reduced to a few mV in the latest cells.

The certain way to kill a NiCd multi-cell battery pack is to completely discharge it. If there is a weak cell it will reverse charge. If this

reverse charge is greater than about .1V it will be a dead duck.

No I am certainly *not* a battery engineer! I am an engineer and have dealt with enough battery problems that I never want to do it again. Can you say taking the blame (it was the right thing to do) for $.5M in repair costs for someone else's design. I have dealt with *many* battery engineers though. Now, *who* stole my _Gates_Energy_Secondary_Cell_Databook_!

Mr. Gates (no not Bill), are you listening? ;-).

>I know DOZENS of people who routinely carry an Olympus Pearl-corder or
>other mini-cassette recorder in their pocket, briefcase, or purse.

It doesn't matter. The law doesn't say that it's OK as long as it
isn't premeditated. It just says it's illegal. ECPA '86 says it is
illegal to listen, and the Communications Act of 1934 says it is
illegal to divulge the results of having listened to a third party.
Premeditation or not is irrelevant.

Hang 'em high, or repeal the law.

The manual that comes with the Fairmate HP 2000 scanner (AOR 2000 under a different label) is pretty basic. I believe there is a leaflet somewhere that explains all sorts of useful tricks that don't appear in the manual.

I would be grateful is someone could post here/send me some of the more useful ones.

Thanks

3865. Beta Testers Wanted for a Scanner Modification

Newsgroup: rec.radio.scanner
Date: 1997-01-30 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <32f14daf.3452087@nntp.cts.com>
Source record: 209541
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.cb,rec.radio.amateur

TO OWNERS OF ANY OF THE FOLLOWING SCANNERS FOR A BETA TEST:
==========

AR-2002 AR-3000 AR-800 AR-900 AR-950
HX-1000 MX-5000 MX-7000
PRO-2002 PRO-2003 PRO-2004 PRO-2005 PRO-2011
PRO-2020 PRO-2021 PRO-2022 PRO-2024 PRO-2027
PRO-2035 PRO-2042 PRO-23 PRO-31 PRO-32
PRO-34 PRO-36 PRO-37 PRO-39 PRO-42
PRO-43 PRO-44 PRO-51 PRO-62

or.....

non-Uniden scanners that use one of the following NFM Discriminator chips:

TK10420 TK10427 MC3357 MC3361 KA3361 MPS5071

and where there is a 22k to 100k resistor at Pin 14 of one of the above chips, the other end of which goes to Pin 12. *And* where pin 13 of one of the above chips is at 0-volts when Squelch is set and +5v or +8v when Squelch breaks.

EXCEPTIONS: Not appropriate or invited for this beta test are the PRO-2006 and all Uniden scanners *unless* any meet the above quals. The PRO-2006 is not invited because it already contains the circuit that will be beta tested for a variety of other scanners. Uniden scanners generally do not meet the above criteria, but if you think yours does, then I'd like to hear from you.

WANTED:

Any number of scanner enthusiasts who want to try their hand at a relatively simple modification to improve the performance of the SQUELCH function in the above listed scanners, or scanners with the above listed NFM chips and Squelch function.

NOTE: This is *not* my MOD-4 nor the well-known clip-or-add-a-resistor Squelch mod. Read on......

I want to make this mod available to a wide cross-section of the scanner community to prove up my new Instruction Set and to get input on "bugs", exceptions, and exclusions.

This modification is time-honored and proved for the PRO-2004, PRO-2005, PRO-2035, and PRO-2042 scanners, but the Instruction Set is new and needs to be tested. Applicability of this hack to the remaining listed scanners or those with listed NFM chips also needs to be verified and tested.

In return for your input and suggestions, I'll make available to you at no cost, my knowledge of this hack in a well written and documented Instruction Set, laser-printed, complete with photos, schematics, and drawings.

I will provide technical support and guidance for this project solely by e-mail and will use the postal mail only to send you the printed Beta Instruction Set

QUALIFICATIONS
==============

1. You must own one of the above listed scanners, or a scanner with one of the above listed NFM chips and Squelch function. You should be reasonably familiar with the innards of your scanner, and it will be ideal if you have a service manual for it. Technical support may be limited or non-existent if you run into trouble and don't have the service manual for your scanner. You should also possess basic electronics savvy and soldering skills, but you need not be a "pro".

2. You must make one or more detailed e-mail reports of your results with the procedure I send you. And you must make suggestions for improvement or simplification of the job, and/or the Instruction Set..

3. You must be capable of following written technical instructions and guidance and of articulating well-prepared critique and technical feedback.

4. You must have a reliable e-mail account and be able to send and receive files attached to e-mail. (Sorry, no JUNO.COM accounts.)

5. You must agree to accept all risk and liability for damages to your equipment and/or other property, including personal injury, that may arise directly or indirectly from participating in this beta test, or of performing this procedure and you will hold me harmless from any and all liability for same.

6. You must respect any and all copyrights and proprietary information that may be conveyed to you related to this beta test. You may not publish the information I send you, nor may you discuss the beta test with non-beta testers in public or in private.

7. You agree to build a simple circuit on a small piece of perfboard or a printed circuit board of your own making, and install it in your scanner. The following parts and materials must be supplied by you or acquired on your own at your own expense and risk:

Integrated circuit: 1 ea 74HC4066 or CD-4066
Resistors: 4 ea 100-k, 1/4-watt
1 ea 10-k, 1/4-watt
Capacitor: 1 ea 0.1-uF/16v (or 35v)
Perfboard or PCB: 1 ea about 1.1" x 1.0"
Wire: 1 ft 24-30ga solid/bare for point-to-point
Wire: 2 ft 22-ga, flexible, stranded for hookup
Wire: 3 in 18-ga solid/bare for ground connect and

mounting in scanner
Tools: Misc Soldering pencil, solder, basic hand tools

If you agree to all the above and want to participate, you need only send me a SELF-ADDRESSED, *FIRST-CLASS STAMPED* BUSINESS-SIZED ENVELOPE, marked "SQUELCH BETA" *and* a note or 3x5 card stating your name, address, telephone number(s), and electronic addresses, *and* a statement that you agree to these terms and conditions. I will use your SASE to send the Instruction Set to you. See the signature box below for my address.

FOREIGN NOTE: Send a self-addressed envelope *and* two (2) IRC's.
(Foreign postage not good in the USA)

EXPIRATION: Invitation to this wide beta test expires on February 10, 1997.

If you have any questions about this beta test, e-mail them to me using the subject line: SQUELCH-Beta

I have a ICOM 24AT that covers 2meter and 440 and will scan 75mhz to 950 continuous with a simple keyboard procedure. While pressing and holding the "B" key, pound (#) key and the light button, have a friend turn the radio on. Simultaneously hold the keys down until the display finishes its test of all functions. Turn the unit off, press and hold the "3" and the light button simultaneously and turn the unit on again. This will activate direct frequency input, which is needed to enter frequencies outside of the amateur bands. It should be noted that you can enter any frequency between .00 and 999.90 mhz but the radio will only receive from 75 to 950 mhz. The scan speed isn't anything to write home about, but at six channels per second, it is just adequate. The radio has a full complement of scanner features such as lockout, search between limits, several scan functions, priority and backlight for a few. If you can find one of these at a ham sale you should expect to pay above $200. Also there is a new Yaesu FT-50R that will receive 76-200, 300-540, 590-999 mhz but cellular is blocked. Transmit 144-148 and 430-450 mhz. 112 memory channels and more features. You should be able to find it in any ham shop or catalog. Prices will vary. Here is a free number to call for pricing: 1/800/666-0908 Lentini Communications. I am not sure if there are any keystrokes needed to unlock the FT-50R or if it is ready to go out of the box. I have certainly enjoyed the ICOM 24AT but now have my eye on the FT-50R as a replacement. Mark Gist N5TTK MGist@aol.com

3872. 900 MHZ info needed

Newsgroup: rec.radio.scanner
Date: 1997-01-30 00:00:00 UTC
From: alana@crl.com
Message-ID: <854624873.26296@dejanews.com>
Source record: 209548

Recently I purchased a 900mhz phone, thinking that I would get added security. But then I discovered I could easily pick it up on my scanner. My question is: What is the range of 900mhz phones? Is it more or less than regular cordless phones?

Email responses are appreciated!

I am thinking about getting a good scanner. Looking at the AR-8000
or Icom IC-r10. What are the pluses and minuses of each of these units.
Also when will the r10 be available in the USA?
Thanks

> "style") microphone.

Nope... generally speaking, Motorola radios only work with Motorola
accessories. Chances are, you can find a used shoulder mic for the
HT-600 at a hamfest somewhere real cheap. Bring your radio to make sure
it works. You don't want to fumble around with third party equipment
and adaptors -- it will cause misery for you, and I doubt adapting a
cheap mic with the two prongs to a Motorola radio would work in the
first place.

Try looking in newsgroup rec.radio.swap to see if someone has what you
are looking for... or post a message looking to buy.

Hope this helps.

$Odd question....'DVP', 'DES' ... the 'D' is for digital, all the hybrid
$is doing is digitizing an analog signal and scrambling it according to
$the alogorithim employed in the hybrid. There is no provision for any
$type of enchanced error correction. You drop a bit, (ie. BER becomes,
$unacceptable), you lose sync, and you lose the signal. In contrast the
$ASTRO(tm) vocoders and Intellipeaters can refresh the signal and restore
$the dropped bits (ie. using embedded error correction in the astro
$signalling word). However as another poster pointed out earlier. In some
$instances the vocoder guess is way off base, and it produces funky
$sounding rx. audio at fringes of the coverage area. Unknown if the IMBE
$vocoder would afford an improvement. In a properly designed system with
$adequate rf signal levels it should be an irrelevant issue anyway.
$Also the native astro mode is NOT encryppted, it's digital - but not
$crypto. Encryption can be added for more security.

Don't have the time (or patience) to go through them feature by feature
.... there are plenty of reviews on the net which detail these radios.

In short, the AR-8000 is a much better package. It has more features,
scans faster, and may be a little more resistant to intermod. The R10 is
smaller, cuter (looks like a cellular phone) and arguably easier to use.
But the ease if use, if real, is simply because it does less. Also,
it has very slow scan speed, and a lot of annoying gaps in its feature
set (like inability to link scan banks ... increment channel number
automatically when entering consecutive scan channels from the keypad ...
etc).

>Also when will the r10 be available in the USA?

When the FCC approves it for sale in the USA.

I think I know what you mean, it makes sense if the Xplorer is a
sensitive frequency counter/ receiver. The strongest frequency would
always take over the counter. But a frequency counter does not "sweep"
it just waits for an input in its range, and counts it. Is there a
input filter that sweeps?

I'm not that familar with SecureNet, so I would have guessed it must have been digital because most of the encryption algorithms work on digital data. So what makes a repeater SecureNet or Astro capable? Sounds like Astro receives the incoming digital data, does some error correction and other processing, and sends the data back out. I guess that's why it's called an Intellipeater (digital capable MSF10000). Do SecureNet repeaters do the same?

Our local Metro Scan frequency directory identifies certain frequencies specifically as "Secure Capable".

Our local PD has Astro capability (not using it full-time yet) and I have a separate assessment on my yearly property tax bill just for them. I wanted to know why they spent millions on their new communications system!

> this area that my possibly misinformed salesperson, please let me know
> what you think.

Yes. It's not, however, the so-called 'memory' effect that is mostly absent in newer batteries. The problem is that the chargers for most NiCad devices are really, really cheap, and they continue to charge the battery when it's already charged. This leads to problems. The solution is to wear the battery down, but if you wear it down all the way, you'll likely reverse charge one or more of the cells, which is pretty much guaranteed to ruin them. So don't clamp the trigger on your cordless screwdriver on to discharge it all the way.

My first Sony cordless had a single battery, and it didn't last that long. And it seemed so strange to me - isn't the point of a cordless that you *don't* have to always get up to pick up the phone?

My current phone is one of Sony's two-battery models, where one charges in the base (with a good charger) while the other one is in the handset. You *can* change the batteries while you're using the phone (if you hit mute first), and the charger battery powers the base unit for a while if you have a power failure. I defininately recommend it.

3895. What am I hearing on 142.325??? Mars???

At my location, (20 min south of York, PA) I can hear what sounds like 2meter packet at 142.325 Mhz. There is a distinct regular beeping in the data that interrupts it roughly twice per second. I haven't had a chance to run the recording of it into my packet setup to see if it is 1200 baud AX-25 yet, but it sure sounds a heck of a lot like it. Could it be a Mars digipeater? Does anybody know? Any help would be cool.

Thanks. TYler

normally when you are hearing one unit clear and the other secure, it's due to operator ineptitude/knowledge. Most Motorola radios used by these agencies are programmed to emit a "BEEP" upon PTT if the radio is in CLEAR mode, no "BEEP" upon PTT is the radio is in secure mode....so it's fairly easy to know whether you are xmitting secure or not.

Only original versions of DVP and DES are hindered by the range problems. The figure is closer to a 20% drop in effective radiated power, so a 5watt portable becomes a 4 watt portable, a 50 watt mobile becomes a 40 watt mobile, etc.

DVP and DES-XL, pronounced XCELL, do not suffer from this problem.

3907. RELM HS200 handheld cellular restoration?

Newsgroup: rec.radio.scanner
Date: 1997-01-30 00:00:00 UTC
From: fhunt@clinic.net
Message-ID: <5cp3vnkod1@news.destek.net>
Source record: 209658

Hello to all;
Where to start? Well i just purchased a Relm HS200 handheld scanner from
Ace Communications after running across their ad on the web at ......
http://www.acecomms.com/Scanns
Now don't get me wrong i do like the scanner and intend to keep it but their
page was a little misleading in saying the scanner would have "keypad entry
of
cellular frequencies". Well guess what! it don't. I still want the scanner
for the reason that it has CTCSS/DCS. I have called and asked them what's the
real deal with this and was told that .....

"There's supposed to be something on there about not being able to
do that for the ones shipped in the states...."
ACE Communications

Well guess what? there wasn't. None that i could find anyway, i looked from
top to bottom and no luck. So if you want a really nice scanner that has
CTCSS/DCS but won't do cellular then this is the one for you.
I did call Relm in Florida and they where most helpful. they even faxed
me a schematic for the CPU of the radio. I can't determine where there might
be a diode or resistor for restoring cellular. For the life of me i cannot
believe the they would gear up for an entire production run of four CPU's
for all four models. Two for the handhelds and two for the base units two
with cell and two without. I bet they used the same CPU in both models!
So what will it take to restore cellular to this radio? If I can get my hands
on a schematic for the one sold "out of the states" i might have the answer.
I you have an ideas please let me know. Thanks for taking the time to read
and respond.

Fulton

Many cellular providers cancel the talk-back (echo) that you normally hear on landline telephones. This has two benefits. First, it cuts down on noise, because noise on the reverse (mobile) carrier isn't heard again on the forward (cell site) carrier.

The second benefit, from the phone user's viewpoint, is an increase in privacy. All an eavesdropper can hear is the landline side of the conversation. This seems to me like a far more effective deterrant than the ECPA '86.

Of course, if you have a second scanner, you could punch in the cell site frequency minus 45 MHz and hear the mobile unit, but reception is much more difficult. Most people have 0.6 watt handhelds, and if they're close to a cell site, they may only be running a few dozen milliwatts.

All,

A friend of mine got a brochure on the new radios from Uniden today. While the features have already been pretty well described here, two items about the 895XLT - the base model - were new to me.

According to the brochure, the 895XLT will have both built in CTCSS capability and an RS-232 port for computer control. It looks like Uniden has been listening.

> slow down the scan rate?

I had a BC890XLT with CTCSS board until recently. I only noticed a slow down in scanning if any of the "filtered" channels were active. With the squelch open, scanning only channels that had a CTCSS tone selected, I measured about 15 to 20 channels per second.

I would much rather have the scanner spend an extra 1/20 of a second or so analyzing the "value" of a transmission on a particular channel than have to hit the "scan" button each time! I made the decision that I will not buy a new scanner unless it is equipped with CTCSS.

The analogy of the notice on a bulletin board does not help your case. Perhaps if the bulletin board were on private property and someone used a pair of binoculars to read the note, that would more closely resemble the the act of listening in to someone's cellular/cordless conversation. Some of you people make me think of the nosy neighbor with a glass held up to the wall so as to permit eavesdropping who, when confronted, says "I couldn't help overhearing your conversation." The binoculars and the glass both represent a scanner - a device for butting into others' business. You can say I'm an "idiot" for using an analog 49MHz cordless phone to make a private conversation, but that doesn't mean that you're not a creep for listening to a conversation that does not concern you, that is none of your business. If someone invented a device that rendered clothing transparent to the user, we would all have to either wear lead clothes or be unwitting "idiot" exhibitionists to the losers and wackos who get their thrills by invading the privacy of the technologically challenged. I am as avid a scanner enthusiast as the next guy, but nothing could interest me less than the mundane albeit sometimes titillating conversations between people who are unaware that - not Big Brother - but slobbering Little Prurient Brother, is watching them.

From: mulligan@ACM.ORG
Message-ID: <5csgf2$ruv@HOPPER.ACM.ORG>
Source record: 209319

coaa@telepac.pt (Bev M Ewen-Smith) asked about:
> ... the relationship between the VHF VOR channels (108-118MHz)
> and ... the associated DME transponders? (900-1215MHz range).

It would appear to be:

DME freq = int[10 * VHF freq] - offset

where: - - VHF freq - - - - DME offset - -
Air Ground
108.00 - 112.25 39 102 / -24
112.30 - 117.95 29 -34 / 92

For DME Ground, the first figure is used if the VHF freq is
an even 100 kHz; the second if it's odd (i.e. 1xx.x5 MHz).
The integer function, int[], simply truncates the fractional part.

I haven't paid attention to frequency counters lately but a couple of years ago, I bought the Opto 3300 (sells for about $125). It is similar to the Radio Shack counter--the difference is that the Opto has a "hold" button which is quite useful. I'm not sure that the Cub offers any great advantage for the extra $75.

I sold the counter because they are nearly useless for "catching frequencies." They work only if you are literally right on top of the source; it is a near necessity to have specially cut antennas for the freqs you are chasing; if you are in an urban area, the counter will lock on anything and everything and not necessarily what you are looking for. I did find that on one occasion, while in the 'burbs and next to someone in a car using a cell phone, I could figure out what channel he/she was using (45 Mhz up from the reading on the counter).

I donï¿½t think so, I own both scanners. In our area it is nearly impossible to connect the 8000 to a real antenna without severe intermodulations. But i noticed no intermods with the R10. In my opinion one should buy the R10 if it should be used in metropolitan area with more than the rubber ducky.

>New to newsgroups...Is there a diff in alt or rec radio.scanner. Most of
>the posts are posted on both groups. Readers on both groups sometimes bad
>mouth each other.

The usual scenario is that the alt exists first, and then the topic is
'legitimatized' by the creation of the non-alt group (in this case,
rec.radio.scanner).

At that point the alt group is supposed to 'go away'; only it never did in
this case. The problem with posting to alt.radio.scanner is that, due to
its unofficial status, some servers carry it and some don't. Still others
allow users to read (aliases to rec.radio.scanner) but not post to it ...
so a posting to alt.radio.scanner can never be answered by those readers.

Solution: use rec.radio.scanner

3926. HCSO Concedes to Examine Trunked Issue Further

Newsgroup: rec.radio.scanner
Date: 1997-01-31 00:00:00 UTC
From: dpinero@pobox.com
Message-ID: <32ffe919.61848291@nntp.ix.netcom.com>
Source record: 209327
Cross-posted to: rec.radio.scanner,alt.radio.scanner,alt.law-enforcement

For those of you following my three week campaign to draw attention to the fact that Hillsborough County, Fl. is going trunked and encrypted, I have some encouraging news.

Yesterday I received a letter from HCSO reporting that some of the points that I and possibly others have made, appeared valid enough to at least study the question further. The long fax which I sent to HCSO, and posted here in these groups, was apparently compelling enough to save the issue from the "immediate denial" basket.

A committee is now apparently at work to study the compensatory aspects of going trunked. The letter explains that after the study is complete, it will be presented to the Sheriff and his command staff for a final decision on the matter. Hopefully this will all translate into some way for the average citizen to continue listening in on basic sheriff patrolcasts here in Tampa, and Hillsborough County. The mode by which this might be allowed will be entirely up to HCSO.

Whether the outcome is bad or good, the fact that the agency will give the matter some serious thought does indicate HCSO is generously responsive to an issue they could just as easily forget. This is proof that if you are in a community that is or has "gone undercover" with its patrolcast transmissions, you might be able to sway administrators into examining the issue further. If you are in a position to do just that, do so. This tide of electronic isolationism must be turned, and only people concerned enough to bring consistent attention to this matter in their own communities are going to succeed at getting any attention at all.

For those of you interested in following the HCSO progress, you may join the mailing list by sending me e-mail at dpinero@pobox.com. A decision on this matter is expected in 4-8 weeks from this date, and I will publicize it via this list.

Dave

Thanks to all who responded to my question regarding 900mhz phones.

I bought the 900mhz because there is a local looney who I used to be friends with who tape records as many of the phone conversations in the neighborhood that she can! I got the 900mhz, thinking I could avoid having the conversations monitored/taped, but I still wanted the convenience of having a cordless. So hopefully this will solve the problem?

I have a scanner myself, but I just listen to it casually and certainly don't tape record stuff. My former friend has become rather obsessed with her scanner and has it on day and night and even tape records things when she's not home so she won't "miss" anything. Bizarre! I feel bad about it, because she first got interested in scanners when she saw mine. I created a monster!

Best wishes and once again, thanks for the response,
Alana (Missouri)

I purchased a used Bearcat 200xlt scanner with no user's manual. I don't use it all that often and, to prevent clobbering the NiCads between uses, I disconnect the battery pack between uses (I realize this may be fatal to memory). After about a week or so, when I turn on the unit again, all of the frequencies are still there but all channels are individually locked out. Is there any way to unlock every locked channel without stepping through all 200? Any help appreciated very much!!!

Thanks,
Tom Conrad

Best just to ask an employee, not a manager. They're more likely to
give out the store number. I had my scanner in the car the other day
with the volume turned up kinda loud. When I got to the first window,
the guy could heard his voice and the customer's voice coming from the
speaker on the scanner. He literally turned white! He just stared at
me and then at the scanner. I thought it was funny.

3935. WTB: Outdoor antenna

Newsgroup: rec.radio.scanner
Date: 1997-01-31 00:00:00 UTC
From: Knut Otterbeck <otterbec@online.no>
Message-ID: <32F23BE8.2A45@online.no>
Source record: 209336

Can you please advise me of a powerful,yet compact outdoor antenna for scanner-use? (For UBC-3000XLT). Please tell me where to order!

Antenna mounts on balcony (pointing west),on 2.nd floor of massive,five-story brick-building. Fair sight towards south and west ,city-center "over top" of building towards east.

I have considered the "Scantenna" from Grove, but I think it is to big. An antenna of no more than 3-4 feet (under 1,5M) would be perfect.

Hope to hear from you experts what you think.....

Best Regards,
Knut Otterbeck

I see that you are in Europe - I was reporting from a North American perspective.

Audibility of intermodulation products depends a lot on the local RF environment. Besides the construction of the radio and antenna, it depends upon where in the RF spectrum you are listening and where the possible interfering signals are.

Here in the US, several people have UHF T-band intermod problems on the Yupiteru MVT-7100/7200 which Europeans have not reported. There are many other examples - I guess the bottom line is how the radio performs in the area YOU are using it.

Source record: 209345

Hi all,

I have a RS DX-440 that has a problem with the antenna jack's built-in switch. The coax and the pl-259 to Motorola plug is in fine working order.

Can anyone tell me what that built-in switch is for? It can't be for internal and external antenna switching since that is done with a different switch clearly marked on the back of the DX-400.

How might I go about fixing it so I don't have to keep moving the plug around to keep the outdoor antenna connected via that built-in switch.

Please reply by E-Mail since I don't get to read this group as often as I would like to.

Thanks,

Michael (shotgun@best.com)

3947. VHF-Hi (In)Sensitivity on BC9000XLT

Newsgroup: rec.radio.scanner
Date: 1997-01-31 00:00:00 UTC
From: lui@netcom.com
Message-ID: <luiE4vsEK.J2p@netcom.com>
Source record: 209348

Is the BC9000XLT somewhat deaf on VHF-Hi, specifically on 154.83 MHz? I connected the BC9000XLT to a discone antenna on a 5 foot mast on the roof of my 2 story townhouse using 75 feet of flexible 9913 coax. I couldn't hear any traffic on 154.83 MHz (the LAPD TAC1 frequency where all Code 2 Hi Incident, Air Unit dispatch stuff happens). My BC145XLT with the whip antenna, and my FT-50R with the rubber duck antenna picked up the traffic on that frequency with no problem.

Suspecting an antenna problem, I connected both the FT-50R and BC145XLT to the same discone antenna, and received traffic on 154.83 MHz just fine. I then connected various internal antennas (a UHF rubber duck, an old CB antenna, a paper clip!) to the BC9000XLT and it received 154.83 MHz pretty well, but with a little more noise than the BC145XLT with the whip antenna or the FT-50R with the rubber duck.

Unfortunately, I purchased the BC9000XLT from someone who misplaced the original AT124 whip antenna so I couldn't try that (although I have a friend with a BC8500XLT who will give me his).

The BC9000XLT works great on VHF-Low (CHP and those 46/49 MHz personal communication devices), UHF (some intermod; the CTCSS board will help with that) and 800 MHz trunking stuff from Orange County (50 miles south). However, I couldn't hear a thing on 154.83 MHz, where the transmitter is only about 15 miles away. The TV stations (audio only of course) work fine, but I had to use the attenuator on several channels because I live line-of-sight to Mt. Wilson.

Would a different external antenna (like the Scantenna) work any better? What about a pre-amp? Is this a problem common to BC9000XLT's? My friend's BC8500XLT seems to have a similar problem. He couldn't receive the local 2m repeater using a 2m ground plane antenna and the BC8500XLT!

Otherwise, I'm very happy with the BC9000XLT. Hopefully, Uniden will come out with something like a BC9500XLT with those trunk tracker capabilities (alphanumeric tags are a top priority with me!).

I have for sale a Radio Shack 2036 in good condition...

This is the UNIDEN 890xlt with the Shack logo on it...

Have the manual, cube power supply and manual. But no longer the
original box due to a leak in the attic.

Will ship for $200..

E-mail with questions....

MS> The usual scenario is that the alt exists first, and then the topic is
MS> 'legitimatized' by the creation of the non-alt group (in this case,
MS> rec.radio.scanner).

That's crap. Alt groups have a totally different 'attitude', and often cover topics that rec. didn't want to deal with at all. There's NO need to 'bring them together', unless you think a power trip on some people's part is a good reason.

MS> At that point the alt group is supposed to 'go away';

alt. groups NEVER 'go away', just check to se, many that have NO traffic still exist, and have since the early '50s (to take a term from Letterman).

MS> The problem with posting to alt.radio.scanner is that, due to
MS> its unofficial status, some servers carry it and some don't.

Unofficial status? THAT'S a joke, what's 'official' on the Internet?

MS> Solution: use rec.radio.scanner

Actual solution, go where ever you feel comfortable, and DON'T post stupid stuff that you have NO clue about.

... To boldly glow, where no man has glowed

>: ship. Can anybody help me.
>: JOHN.

John,

In addition to the primary ssb freqs someone posted, try these freqs.
I have verified most of them in my job as ship's Radio Officer.

US Coast Guard stations are authorized for the commercial ssb frequencies:

Channel Ship Freq Shore Freq
424 4134.0 Khz 4426.0 Khz
601 6200.0 6501.0
816 8240.0 8764.0
1205 12242.0 13089.0

2261 Khz Air/surface
2670 Khz USCG Operations
3023 Khz SAR Air/surface
4125 Khz Air & Sea distress (but everyone yacks here anyway)
5692 Khz Coast Guard Helos SAR
8980 Khz " " " "
11198 Khz " " " "
15081 Khz USCG Air/Surface SAR
15087 Khz " " " "

Let me know if you need NBDP (Sitor) frequencies.

Happy listening!

Jon

While in the metro New York City area, you can hear space shuttle
rebroadcast
on 146.610. The repeater is located about 12 miles west of New York city
on a mountaintop, so it has good coverage.

Hope you enjoy the coverage.

QSL is a response used by ham radio operators that basically means that
the
response was received. Actually, it should only be used for CW
communications
(morse code).

Their use of the term seems improper.

We appear to have some new services in our area in the cellular telephone band and I am curious as to what these new signals are.

They are hard to describe, but here goes. The cellular carrier who has the channels between 869 and 880 has taken four or five channels at the very low end of the band and put on something that sounds like a buzz saw that has an extra little scraping sound approximately two times per second. The audio note of the buzz is around 50 HZ.

The carrier with the channels between 880 and 894 MHZ has taken four or five channels near the high end of the band and activated some digital service that sounds like a somewhat slower buzz saw or maybe an electric drill rotating at about 10 revolutions per second. The timber of the buzzing sound changes once per second giving it a definite cadence. It reminds me of a slowed-down version of the buzz saw at the low end of the band.

The two sets of buzz saws have been in town since last August or so. I suspect that the slower buzz saws may be TDMA cellular, but what might the other ones be?

Well, an attenuator is a button on some scanner radios. It attenuates (reduces) the signal strength. You might need this if you are monitoring nearby strong stations.

Radio Shack and Uniden both carry 30 and 50-channel models
for under $150. Consider the Uniden BC60XLT or BC80XLT and
the Radio Shack Pro-28 or Pro-70. Purchasing via mail could
save you another $20 - $40 bucks. Do some homework, do some
web searching and perhaps pick up a Radio Shack catalog to
get more info on these radios. Good luck!

>Rest my Case
>
>Larry

Sorry Larry. I think you're wrong. Commercial or amateur designs will
bring it back.

Then they will start using encrypted digital, but that will take a while.

Just because someone says scrambled, doesn't mean they are talking about
encrypted. Look at the recent post exposing MDT transmissions.
Scrambling is for improving reliabilty, not security.

Some scanners will be able to be modified, others will have to be replaced
ofcourse.

Besides, there are lots of agencies that don't have the $ to change over.
Not everyone wants or needs digital. It will be quite a while before
your scanner is useless.

That sounds like a description of normal cellular control channels to me. The difference in sounds may be due to each carrier's choice of hardware.

Hello-

I appear to be lost in a fog after picking up an AOR 1000 XLT off the swap group

awhile ago. Nice reciever, just that it _didn't come with a manual_ and I cant get it to access more than 100 channels somhow?! I don't understand how to properly program the "banks" and "channels" in it and I cannot tell wether banks are enabled or disabled. If anyone would be able to shed some light on basic operating procedures for this unit, please reply via email and/or post.

Thanks-

Mike Capone

Hello.

I have a nice Radio Shack PRO-43 here for sale.
It is a great 200 channel, triple conversion handheld scanner wi
th the cell and shortwave mods.

As you all know, the price of these high quality cell capable rec
eivers will only go up as time goes by.
Dont miss this one in pristine condition, with antenna, battery
pack, and manual for just $250.

Terms are prepay with money order, or I will also ship UPS COD.

Thanks.

Orange County has a red channel (among others) that are coordinated by the county dispatchers. Red channel is available to all local city and county PD's (not CHP to my knowledge). When a pursuit happens there is a red channel broadcast and the pursuit is called on red until it is terminated or goes out of the county. Since there are a number of cities in the county all mingled together there is usually pretty good interagency communication on things like pursuits, carjackings/stolen cars, robbery suspect info, etc. We also have regional air units (helicopers) that follow pursuits and coordinate the pursuits on red channel once they get on scene.

Other than red channel each individual department has its own green channel for dispatch/records checks.

County wide there are two tactical channels (Orange North and South) for longer term, localized interagency incidents (manhunts, hostage situations, etc) where they are involving extensive radio use and/or interagency communication. There is also a talk channel (car to car - white) and a few other incidental channels not often used (purple for records checks but they are usually done on green).

Overall communication is pretty good, pursuits usually only involve two or theee units plus an air ship, and if weather is bad or the people are driving like nuts some or all units are requested to drop out and turn the pursuit over to another agency. We average a pursuit a day, but usually have them on the weekends.

> > > I guess one persons memory effect is anothers early failure?

Friend, you are DEAD WRONG! I have worked with enuff NICADS over the
years that the shear weight would sink a battleship.It's so bad with
particularly the old batteries that PROFESSIONALS in the field actually
put relays accross with bulbs. The idea being that when the relay is
energized by the battery the contacts will now be closed and the battery
will send the current to the light bulb. When the battery is down too much
the relay will start to chatter. Which will let you know the process is
finished.

I work for a a National broadcasting service and I work with Nicads for
at least 5 hrs a day and am constantly doing the "Nicad-Shuffle" from
charge pack to device and BELIEVE me we deliberatly bleed our NICADS on

these relay set-ups! I can't think of any news service not currently doing this in my neck of the woods.

If you still don't believe me, go check
http://home.sprynet.com/sprynet/lar01/nicad.htm

Rich

There was an article posted on rec.radio.scanner about DVP in 1995.
I appended this article to this message.

Unfortunately the article still leaves some questions unanswered. In
particular can anybody tell me what modulation method DVP uses? Is
it FSK, FFSK or what?

Also what bit rates are used?

dparkin@solartron.com

A Brief Look at Analog and Digital Encryption Devices by Doug G. (AOL

Encryption of the human voice is a complex and intricate procedure that is accomplished by one of two methods: analog or digital. The human voice, for the most part, occupies the frequency range from about 100 Hz to 3 kHz, forming complex analog waveforms and patterns. Analog speech encryption can be as simple as speech inversion, where the human voice is "inverted", resulting in the radio traffic sounding like a popular Disney character, or quite complex, with the voice split at about 1500 kHz, inverted at both ends, with the center carrier swept randomly up and down several kHz from the center transmit frequency. Digital voice encryption requires that the analog signal be sompled, digitized and encrypted, transmitted, and decrypted in real-time. Since complex analog encryption is rather rare, our focus will be on digital encryption products manufactured by Motorola, Inc.

Analog Encryption Types and Products

Since speech inversion is easily defeated (the Ramsey Electronics SS-70), most law enforcement agencies have ceased using this encryption technique. I know of no federal agency that has ever used analog encryption devices. These simple, low-cost devices are more suited to the local police department, since all but the most serious scanner owner will not be able to understand the radio traffic. One of the largest manufacturers of analog encryption devices, Midian Electronics, offers a complete line of products from the simplest and smallest speech inversion scrambler to a highly sophisticated "rolling-code" encryption device. Contact Midian Electronics at 1-800-MIDIANS for further information on their line of analog voice encryption products.

MotorolaTM Encryption Protocols and Products

Although there are still some analog Motorola encryption devices still in use, including simple speech inversion products, the majority of devices currently in use are of the digital variety. All Motorola voice privacy protocols are referred to simply as "SECURENET", which is a general term that Motorola uses to identify it's digital encryption products. There are three different basic encryption protocols, two of which have two distinct variations, for a total of five unique (and non- compatible) encryption protocols. Each of the five protocols uses a field inserted "key", which is what makes the communications secure. Since the author is not a cryptographer, it is simple enough to understand that without the proper encryption "key" loaded into your radio, all that you will hear is white noise, or static, when encrypted traffic is being passed between radios.

The Original Propreity Encryption Algorithm, DVP

DVP, a term that Motorola coined for use with their initial entry into the digital voice encryption product field, is a proprietary Motorola protocol that uses a self-syncronizing encryption known as cipher feedback. Depending on who you ask at Motorola, DVP actually has two different meanings. DVP stands for Digital Voice Privacy or Digital Voice Protection,

same encryption protocol, different terminology. The basic DVP protocol is capable of 2.36 x 10^21 different "keys" to ensure protection for your voice conversations.

Data Encryption Standard

In the middle 1970's, the federal government finally decided that they needed to standardize all federal agencies on a common encryption protocol to protect sensitive, but unclassified data. Several different schemes were submitted, but the one approved by the National Bureau of Standards was a protocol that became the Data Encryption Standard, or DES. Broaden your mind for just a minute and forget about radio traffic. There are several other forms of communication and data that must be protected from prying eyes (and ears). IRS records, Federal Banking data, etc. is not "classified" in the military sense, but does require protection nonetheless. This Data Encryption Standard, once standardized, would allow all federal agencies to use the same encryption protocol, allowing them to intercommunicate when and if the need should arise. DES is capable of using 7.2 x 10^16 different key combinations and uses a self-synchronizing method of encryption known as cipher feedback. Just remember, DES is not authorized to encrypt communications or data that is classified in the interest of national security, but we'll get to that in just a minute.

So, we just learned the two basic types of Motorola encryption, DES and DVP. In a nutshell, DVP was designed to be used by anyone who needed protection from unauthorized eavesdropping, including local government and businesses. DES, on the other hand, was designed to be used only by the federal government. Availablity of DES products was supposed to have been severely restricted to federal government agencies and military personnel only, but a trip to any large hamfest will always yield at least one person selling SECURENET products and radios.

Variations of the Originals

After DVP and DES products gained acceptance and their use became widespread, a glaring flaw became obvious. When using their radios in the encrypted mode, agents noticed that their radios did not seem to transmit as far as they did when in the clear mode. In a flurry of commotion and denial, Motorola quickly went back to the drawing board and found out that sure enough, use of the original DVP and DES protocols did limit the range of the radio, sometimes as much as 30%. In response to these complaints, two new variations of the original protocols were introduced, each with the added acronym "XL", leaving us with four distinctly different encryption protocols: DVP, DVP-XL, DES and DES-XL. The "XL" variations eliminate the range loss problem and in the case of DVP-XL, the number of available "keys" is increased to 7.9 X 10^28. DVP-XL and DES-XL both use a different type of encryption known as counter addressing. Just remember that all radios must use the exact same type of encryption to inter-communicate in the secure mode (DVP-DVP, DES-XL-DES-XL, etc).

Digital Voice International

The fifth unique encryption protocol, is known as DVI-XL, or Digital Voice International. Since DES products require a munitions license to export from the U.S., DVI-XL allows other countries to enjoy the same type of encryption as DES-XL, but with a reduced number of available keys. DVI-XL is not common in the U.S., although is quite common in countries such as England.

The Key Variable Loader

If you've been reading the above thoroughly, you may be asking yourself "Well, how do you get the "keys" into the radio?". Good question, so let's talk about it. The device used to load these encryption "keys" into a radio is known as a "Keyloader", or in Motorola-speak, a "KVL", or Key Variable Loader. This is a hand-held device that looks similar to a radio, but allows the operators use to insert the "keys" into the encryption devices of the individual radios. The KVL attaches to the radio with a special cable and attaches to the interface port of the radio. The individual actually enters numbers (and letters, depending on the protocol) into the KVL to produce the "key" to your radio traffic. The KVL transcribes your input of approximately 20 characters into the "key" that is loaded into the radios. KVL's are capable of storing about 16 "keys" in non-violatile memory, allowing radios to be loaded when desired. Since access to the KVL constitutes access to the entire system, these devices are usually closely guarded at the radio shop. There are five different KVLs, one each for DVP, DVP-XL, DES, DES and DES-XL and a separate KVL for DVI-XL. Newer loaders are made to support both DVP and DVP-XL and another to support DES and DES-XL (Two protocols with one loader). It is rumored that there is a "super KVL" that will load any of the four domestic encryption protocols, but the author has never seen one, and it is not listed in any Motorola literature.

Advanced Encryption Products

More recently, there have been solutions to nagging problems in some of the larger cities. For example, lets say that you have to manage the entire Drug Enforcement Agency radio system in the south Florida area, which is probably quite a large fleet of radios. You basically have two choices, either you have one person whose only task is to keyload radios all day, or you issue each office a KVL and allow them to do it themselves. As we spoke about earlier, if you increase the number of KVLs, you increase the possibility that one will be lost or stolen, not to mention the fact that KVLs are outrageously expensive ($3000+ each) to purchase. Enter OTAR, or Over-The-Air- Rekeying. Quite simply, you have one dedicated computer, called a Key Management Controller, or KMC, which centrally manages all of the encryption "keys". OTAR is available for any one of the five available encryption methods as an add-on component. OTAR allows radios to have new encryption keys loaded into them over the air, just as the name suggests. Encryption keys can also be erased over the air in a process called "Key Zeroization". If a radio is lost or stolen, all of the radios in the system except the lost or stolen one can be instantly re-keyed over the air. Also, lets say that you are about to raid a clandestine drug laboratory and you accidently remove your radios battery, thereby erasing the encryption key.

No problem, the KMC can immediately download the encryption key back into your radio before you bash down the front door! The KMC can also download the available system keys into KVLs by phone lines so that encryption keys may be kept locally should the radios be out of the range of the KMC when new keys are sent out. The other part of Advanced SECURENET is "Multikey", which is the ability to store multiple encryption keys in one radio. Most radios can only hold one encryption key at any one time. If you have two separate groups who don't intercommunicate, multikey allows supervisors to have both encryption keys in their radios and converse with both groups, but individuals in the separate groups cannot monitor each others conversations. Some radios, when equipped with Miltikey, can have as many as 16 different encryption keys.

The Future - Classified Radio Communications

As we previously mentioned, even with the high level of security offered by the Data Encryption Standard, no classified traffic may be encrypted with DES. A new type of encryption, known as Facinator, offers the government the ability to encrypt land-mobile and other radio traffic up to the level of Top Secret. Facinator is a completely different algorithm whose details are still classified. The U.S. Secret Service is reported to be using Facinator in their Motorola Saber UHF radios for executive protection and security details.

Motorola's latest development, the "ASTRO" TM system, is capable of transmitting either analog or digital voice, clear or secure, conventional or trunking. This system is currently being installed in south Florida for the Florida Highway Patrol on 800 MHz trunking (without much success, I might add). LAPD is also switching over to the Astro system and most reports received so far indicate that the system works fine.

The Radios

Digital voice encryption is not a cheap endeavor. There are several Motorola portable and mobile radios that offer SECURENET as an option. Even a 15 year old Motorola MX350S portable radio that has DVP is about $350 used. These are 4-32 channel models that are quite large and cumbersome, but incredibly durable. The most popular is the SaberTM portable radio. Although still large and bulky, the Saber offers many options and is still the top-of-the-line portable radio. The Saber comes in three different varieties, known as Saber I, II and III. Both SECURENET and non-SECURENET radios are available. A Saber I has 12 channels and no display; a Saber II has 72 channels with three buttons and a display; a Saber III has 120 channels, a full keypad and a display. Additionally, Saber II and III radios offer scan capabilities. A used Saber III with voice encryption installed goes for about $800 on the used market. Not bad, considering that current list price is over $3000! I cannot stress enough the importance of being extremely careful when you purchase a used radio. Be careful, and be sure you get a reciept.

Repeaters and SECURENET Products

Using digital encryption does have it's drawbacks. The common repeater, which consists of an input frequency and output frequency, normally uses some sort of Continuous Tone Coded Squelch System, or CTCSS, trademarked as Private LineTM (PL) by Motorola or ChannelGuardTM by General Electric, to prevent unauthorized or inadvertent access to the repeater. Well, to put it simply, you can't send a CTCSS tone with any form of digital encryption. There are two ways around this shortcoming; either the repeater does not use a CTCSS tone, which is called a transparent repeater, or a repeater such as the Motorola MSF5000TM is used. The MSF5000 can be operated in the transparent mode, which allows both clear and secure transmissions to be passed, or the repeater itself can be keyloaded with the same encryption key as the radios, allowing only those transmissions with the proper encryption key to be re-transmitted. It is commonly said that most open (no PL) repeaters will not pass digitally encrypted voice. This is simply not true. The repeater will pass the digital signal, which actually has a narrower deviation than regular FM voice, just fine. Whether or not the signal is still intact enough for decryption is the big question.

Conclusion

It is clear that monitors will probably never be able to eavesdrop on digitally encrypted radio traffic, but I hope that this short introduction to the many facets of encryption products available helps you to better understand their use and operation. The fact remains, however, that it will be many years before the home computer advances to a stage that scanner owners can decrypt a secure radio transmission.

Note: Many of the terms used in the above article are trademarked by Motorola, Inc. including, but not limited to: SECURENET, DVP, DVP-XL, MX-350S, MSF5000, Saber, OTAR, and PL.

Greetings:

I have Several Scanners I need to sell. These are my personal scanners
that I have used over the past years. All were bought new.

RS Pro 2024
Uniden BC 142 XL (modified for satellite reception - Wider IF)
RS Pro 2040
Regency D310 (Older and kinda funky!)
RS Pro 2037

If interested, please Email me and I will send detailed info.

n7mps@micron.net

I'll tell you how if you promise not to do it.

I'm only half kidding. Odds are, most folks read both alt. and rec.,
so by double posting, you aren't getting more readership, just taking
up space on the group, and slightly annoying those of us who do read
both. In addition, there is an effort underway to gradually let alt.
fade away. By continueing to use it, it lengthens the process.

All that said, ... on your "posting page" or "window", where it says
"newsgroups", fill in the names of all you want it sent to, seperated
by commas.

No ill-will intended....

Mark

Of COURSE it's my opinion.
Whose else would it be?

Do you mean those laws against divulging what you've heard to a non participant of the transmission mean nothing? or those laws banning using what you've heard for personal gain are really just an advisory? how about the ECPA act of 1986, totally meaningless??

Methinks you should keep quiet about you transgressions, blabbing about it on an open newsgroup is not the smartest thing you could do!

> Is it possible to hook my Pro-2006 up to my Mac??? If so, what do I need to do?

I tried to do the same thing. You need an interface board and software. I bought the Opto 456 board and tried the Mac software on the market. After reading good things about Probe software (runs on PC's) I purchased it and tried to run it under emulation (Softwindows) on my Mac. It would not run because of a softwindows/Mac problem (no true RTS signal). The author of Probe (Perry Joseph) bent over backwards to help me get it to run on the Mac but we were not successful.

Sure, I could spend BIG bucks and buy a DOS card for the Mac but it was much cheaper to buy an old PC and run it from there. I spent less than $100 on PC hardware and scan at 50 channels per second (Probe is designed to run very well on slower PC's). The real bonus is that my Mac can be used for other things while the PC chugs away running the scanner.

I have no financial interest in Probe other than being a satisfied customer.

From: Lou Shirley <l.g.shirley@worldnet.att.net>
Message-ID: <01bc0ef7$b0305600$e36374cf@1>
Source record: 209445

Hi Bill, the freq is FBI, NYC. The antenna site was on the Empire St Bldg previously. Input was 163.725 and the output was called Echo 1 (rptr).

Also monitor the link freq, 414.350. Sometimes they use it, sometimes... but you will hear it in NJ too.

You'll find that units can also use this and 167.2875 as CP (command post) channels. They usually stay in the clr when they do. Also monitor 168.825, 172.525 if you hear "Lucky" units. There are plenty more freq's they can use, but these two are interesting.

C-28 Base is one ID. I use to hear Signal units on it often but don't listen to NYC traffic that much anymore. I'll e-mail you with better info than I'd post here if you really want to monitor NYC.

Everyone in NYC and NJ should monitor 419.325 for more link info, it seems that most people have overlooked this freq. Listen to it and 167.2875 and 167.3375 (anyone in PA monitor the last freq? It used to be active a few yrs back, now NJ and NYC units are using it)

I've been finding that certain talk groups can access quite a few UHF channels and this can change depending on the type of surveillance. The Eye also has data links that you can hear in CJ on 414.300 and 419.200. Any NYC buffs want to add more to the UHF info?

Regards,
LGS

3992. Big Bear Ski freqs??

If I accidently tuned to the cell phone band and turned up the volume, I would find that generally I can hear both sides of the conversation. Sometimes I only hear one side, but that is a very small percentage of the time.

>Methinks you should keep quiet about you transgressions, blabbing
>about it on an open newsgroup is not the smartest thing you could do!

hey oink brain:

Newspapers and tv stations have banks and banks of scanners
How in the hell do you think they get to the news scenes they
decide are worth getting a news story about?

What fuckin' country you live in ? Not the USA.

Or what outhouse community u live?

Keep quiet about what? News...events going on that are seeable
by any and all who are at the scene.... give your brain a rest
and stand up....air it out.

gee, think of all those scanners being sold in all states and
to all who want them....have you an aneurism on one of your
trophy 'FARTS?'

What am I supposed to be fearul of? the SS.
the FBI, the cia or the local chapter of "yahoo's anonymous"

I don't know where you are at with yourself, but i think you
had best get a reality-grip on society at large. Looking at
all that grows in the outhouse has given you a major problem
being understood.

Think of all the stuff the Cheeks guy has published. I don't see him in any jail in the USA. Maybe if he lived in England or china or vietnam or mexico or even Canada. 'but in the usa where "full access" to all information is a given "freedom to"

Look at all the books out on scanning and how to listen to teh FEDS and the Counties adn the Mounties and the local football teams....get real. Books and books and even microfiche about all those federal freq's listed....

You really need a good grip on more than what you are holding in your left hand.

Hi Jerry.... recent and future action by the FCC does provide radio amateurs with a unique opportunity to start the process of removing restictive covenants on ham radio antennas. I alluded to this in my CQ-VHF Magazine article last year. You can find a copy on my Antenna Restrictive Covenants Home page:

http://www.gate.net/~donstone/antenna.html
